Receiver enable output: +10 v rectangular wave having leading edge corresponding to Receiver Delay Control, and pulse width corresponding to Receiver On-Time Control.

INPUT POWER:

105 - 125 v 50 - 60 Hz, 40 watts.
SIZE: 3½" high x 17" wide x 15½" deep (with hardward for mounting in standard 19" relay rack).
WEIGHT: 20 pounds; shipping, 20 pounds.

PROGRAMMABLE UNIT MODEL 206A

Parallel BCD rear panel inputs for each timing control. Remote operation on zero position of manual controls. Switch closure to ground or application of 0 to +0.8 v dc is binary one; open circuit or application of +2 to +5 v dc is binary zero. For switch closure, Model 206A produces 3.2 ma dc max. For manual setting of controls, rear connectors produce BCD outputs corresponding to control positions.

See Section 4900 for our pages on Synchro Converters.

SERIES 202

SAMPLING VECTOR COMPUTING SYSTEMS

For pulsed or CW measurements of Complex Impedance, Admittance, Phase, Transfer Function and Power

FEATURES:

- Computing time less than 1 cycle after sample
- Computes real and imaginary components, phase and magnitude
- Measures CW, gated CW or rapidly varying AC signals
- Selectable sampling times — 0.5 to 500 ms
- Single burst measurements — sample and hold outputs
- Analog and Digital readouts
- Plug-in concept for broad versatility
- Internal delay to eliminate transients
- Differential measurements for high accuracy

APPLICATIONS:

- Automatic high speed testing of components
- Measurement of electro-acoustic transducers under low and high power
- Use as phase-lock detector for low level signal bursts
- Analysis of acoustical fields
- Measurement of real and imaginary input power

The 202 Vector Computing System provides real time computation of vector components, phase and magnitude, requiring only a single sample of the AC test signal and AC reference for measurement. Direct reading digital and analog displays are produced, with provision for connection to X-Y or strip chart recorders or digital computers.

Consisting of a Model 202 or 202A Main Frame, a selectable plug-in and a readout unit, this system can be used for direct computation of impedance, admittance and transfer function under a wide range of voltages, currents and frequencies.

Its rapid computing speed is designed for simultaneous graphic recording of all four outputs, and is particularly useful for frequency plotting or complex immittance plane recording. Yet its sample and hold outputs are excellent for single burst measurements. Measuring on external command, this system is well suited for automatic high speed testing of components as well as complete network analysis.

VECTOR COMPUTER MAIN FRAMES 202 and 202A

Heart of a 202 system is the Vector Computer Model 202 or 202A. The Model 202 accepts two normalized AC signals from the plug-in, producing DC voltages proportional to real and imaginary components. In addition, the Model 202A also produces simultaneously DC voltages proportional to magnitude and phase. Utilizing a unique sampling and integrating technique, effects of noise and harmonics are considerably reduced as compared to systems which utilize peak reading techniques for magnitude and zero axis crossings for phase.

PLUG-INS:

Plug-ins 202-PA-2505 and 202-PA-2506 are for general purpose use, and complement each other to cover a frequency range of 100 Hz to 10 Mhz. Each consists of a plug-in section and a probe unit, with 10 ft of cable. Model 202-PA-2505 measures up to 5,000 v rms, and is completely programmable by computer. Model 202-PA-2506 covers the complete 150 Khz to 10 Mhz band without frequency band switching.

Both units are capable of the unique Dranetz differential admittance measurement as well as impedance and transfer function. Both plug-ins also provide auto-ranging of the DVM's on the Model D12 readout.

READOUTS:

Two panel readouts are available. Model D10 provides two 5″ analog meters, mounted with accessory circuits, on a 5¼″-high panel for 19″ rack mounting. Model D12 (shown in photo) consists of two direct reading digital meters, with BCD outputs mounted on a 3½″-high panel for 19″ rack mounting.

MAIN FRAME SPECIFICATIONS

Repetition Rates:

A. On CW, automatic recycling at approx. 10 samples/sec.

B. On gated AC, externally triggered, from 100 samples/sec to 1 sample per 200 seconds.

C. Single pulse operation.

Sampling Times: selectable from 0.5 to 500 ms; 4 - 8 cycles min.

Hold Times: up to 3 minutes.

Inputs:

A. Signal power: see E-I limits, plug-in chart, below.

B. Command (not required for CW). 5 v pulse or gate into 3KΩ, related to turn on of signal source.

DC Outputs (all simultaneous):

A. (202 and 202A): 0 to ±5 v fs, proportional to real and imaginary components.

B. (202A only): 0 to ±1.80 v proportional to 0 to ±180°. 0 to 1 v fs proportional to magnitude.

Monitor & Command Outputs:

Signal or pulse outputs for AC signal monitoring and sampling time presentation, Z axis scope intensification, scope synch, pen lift, out-of-limit disabling, and blanking.

Front End Plug-Ins:

Accommodates all Dranetz Series 202-PA-plug-ins directly and all Dranetz 100-PA-plug-ins by use of adapters 202-PAR-2501 and 100,713.

Readout Compatibility:

Compatible with analog DC meters (e.g. Dranetz Model D10), Digital meters (e.g. Dranetz D12), oscilloscopes, X-Y recorders and A-D converters.

Input Power: 105 - 125 v, 60 Hz, 120 watts max.

Mechanical:

A. Size: 8¾″ high x 17″ wide x 18″ deep (will fit into 24″D hatch). Carrying handles and slides for 19″ rack mounting.

B. Weight: 56 pounds; shipping 95 pounds.

PLUG-IN SPECIFICATIONS

Model	Measuring Function	Freq. Range	Z - Y Ranges	E-I Limits	Nominal Accuracy *	Operation	Probe Size
202-PA-2505	Impedance, Differential Admittance and Transfer Function	50 hz to 300 Khz	Z: 1 to 10^5 Ω Y: 10 to 10^6 μ℧	1 - 5000 v rms 10 ma - 30 A rms	±2° phase ±2% fs Amplitude	Manual and Programmable	3½″x12″x12″
202-PA-2506		150 Khz to 10 Mhz	Z: 2.5 to 10^4Ω Y: 10 to 25 K μ℧	1 - 100 v rms 1 ma - 1 A rms	±2° phase ±2% fs Amplitude	Manual	3″x4″x6″

* Higher accuracy in differential mode

ENGINEERING LABORATORIES INCORPORATED

PLAINFIELD, NEW JERSEY 07062 • TEL. (201) 755-7080

SERIES 215
AC SAMPLING VOLTMETER

Measures average value of signals in sampling periods as short as 100 μsec.

FEATURES:

- Selectable sampling periods
- Internally delayed or externally triggered sampling for measurement of any selected portion of signal waveforms
- Excellent noise discrimination during signal measurement
- Can be triggered externally or by internal sensing of signal
- Sample and hold d-c output for DVM or a-to-d conversion and automatic print out
- Frequency range of 100 Hz to 1 Mhz
- Sampling rates to 2,000 per second
- For use to 5,000 vrms, 50 Amps rms with available probes

APPLICATIONS:

High speed component testing; analysis of time varying or transient effects; measurement of direct or reflected acoustical signals; and measurement and control of signal burst levels applied to radiators or receivers (when used with Dranetz Series 501 Servo Control Unit).

Series 215 is a true averaging AC voltmeter for rapid sampling and analysis of complex A-C signals in the form of single transients, repetitive voltages or multiplexed signals. Its unique integrating design makes possible averaged measurements within a time as short as one cycle and provides discrimination against background noise and spikes.

SPECIFICATIONS

Frequency Range: 100 Hz to 1 Mhz
Input Impedance: 1M ohm, shunted by 50 pf
Input Signal Levels: 6 voltage ranges, 0.1 to 5 vrms, fs
For extended ranges use one of the following probes:
Tektronic Models: P6006 (1-50 vrms), P6007 (10-500 vrms), P6013 (100-5,000 vrms);
Dranetz Models: TR2004 (1-50 A rms), TR-2005 (0.1-5A rms), Threshold adjustable 4-20% fs.
Input Circuit Configurations: single ended, floating ground; differential.
Repetition Rates:
CW: 10 samples/sec with internal generator
Gated AC: 1 sample/2.5 sec to 1,000 samples/sec, without internal delay; with internal delay, 20 msec minimum off-time required between pulses.

Triggered Input: square wave, pulse or step, ±5 v peak.

Single Shot: Output changes to 99% of change from previous reading. Shift less than 1% FS/minute.

Sampling Periods: 0.1, 1 and 10 msec. Requires min of 1 full cycle.

Delay Control to Mask Transients: External or Internal. Controlled on internal, 4 to 30 Hz delay, selectable, below 0.5 Mhz; 6 to 60 μsec delay above 0.5 Mhz.

Accuracy: ±2% at reading, ±½% fs, single ended input.

Monitor and Control Outputs: Synchronizing pulse (+10 v, 39kΩ) for external equipment; Monitor output: 2 v p-p with 0.5 v pedestal indicating sampling time.

Output Indication: Panel meter calibrated in rms. DC output 0-5 v fs, drives > 10K ohm load.

Indicating lamps: For overload, correct sampling and sampling period.
Input Power: 115 v, 50-60 Hz, 18 watts.
Size: 12" x 3½" x 15½" deep, equipped for 19" rack mounting.
Weight: 16 lbs; shipping, 25 lbs.

SERIES 501A
SERVO CONTROL UNIT

FEATURES:

- Precision control of signal level
- Broad frequency range of 100 Hz to 1 MHz
- Wide dynamic range of 60 db
- Ground isolation of signals

APPLICATIONS:

- For CW and gated CW control
- Measurement of complex impedance and admittance under high power
- Constant level control for acoustical calibrations
- Vibration amplitude control for mechanical impedance measurements
- Parameter control in programmed industrial process systems.

Series 501A Servo Control Unit maintains the level of a signal at a precise value, regardless of fluctuations in source level or load. By proper scaling of signals the unit will control voltage, power, acceleration, velocity, displacement, pressure or other physical functions. The 501A's servo system senses the voltage at a sampling point, compares it with an internal reference voltage and controls the position of a precision potentiometer, to adjust the voltage to a predetermined level.

SPECIFICATIONS:

Modes of Operation:
(1) CW (2) CW or Gated CW when used with Dranetz Model 215
Frequency Range:
(1) CW: 100 Hz to 100 kHz (2) CW or Gated CW with Dranetz Model 215: 100 Hz to 1 MHz

CONSTANT VOLTAGE OR CURRENT CONTROL FOR GATED CW SYSTEM

Signal Input: Voltage level, 3 v rms max. Input impedance, 2 kΩ, approx. Leads: 2 wire, single-ended, both isolated from ground.

Signal Output: Level: From 0 to 60 db below input level. Input impedance of equipment following (e.g., power amplifier) should be 10kΩ or higher. Input leads to amplifier: 2 wire, single-ended.

Feedback Control Voltage or Current: CW (w/out Model 215), between 0.5 and 5 v rms into 50,000 ohms. CW or Gated CW (w/Model 215): Same current and voltage range as 215 with or without probes. (See above).

Control Characteristics: Dynamic range: 60 db. Level control — Maintains feedback control voltage within ±2% up to 500 Khz for change in input signal or power amplifier load of ±30 db. Response time — Approx. 0.5 sec.

Oversignal Protection: Automatic signal cutoff for over-level signals.

Power Required: 115/230 v, 60-400 hz, 0.6 amps rms.

Size: 7" high x 16½" wide x 11½" deep equipped for mounting 19" rack. **Weight:** 25 lbs.; shipping, 40 lbs.

See Section 4900 for our pages on Synchro Converters.

DRANETZ

ENGINEERING LABORATORIES INCORPORATED
PLAINFIELD, NEW JERSEY 07062 • TEL. (201) 755-7080

SERIES 301 PHASE METERS

FEATURES:

- 70 db input level range
- 1° accuracy, 0.1° resolution
- 5 Hz to 0.5 Mhz frequency range
- 0° to 360° phase range
- 0 to 3.6 vdc analog output

Series 301 Phase Meters are low cost, direct-reading instruments for measurement of the phase difference between two sinusoidal signals.

Phase angle is indicated by a large taut band meter with mirror scales of 0 to 36, 0 to 90, 0 to 180, and 0 to 360 degrees. The 70 db input range of the 301 is achieved without range switching. Operating controls include an input reversal switch and an "Add 180°" switch which allows the operator to avoid the 0°/360° discontinuity. Model 301A also produces a DC voltage output proportional to angle.

SPECIFICATIONS

Frequency Range: 5 Hz to 500 Khz
Input Impedance: 100 KΩ
Absolute Accuracy (independent input levels):
±1°, 45 Hz to 40 Khz, inputs > 200 mv
±1.5°, 7 Hz to 100 Khz, inputs > 200 mv
±2°, 5 to 7 Hz and 100 to 200 Khz
1° additional for each additional 100 Khz
Minimum Input Levels:
1 v rms, 5 Hz to 30 Hz
300 mv rms to 50 mv rms, 30 Hz to 200 Hz
50 mv rms, 200 Hz to 50 KHz
50 mv rms to 500 mv rms, 50 Khz to 500 Khz
Maximum Input Levels:
160 v rms
Panel Meter:
6" taut band movement
0.5% fs linearity (add to accuracy)
Rectangular Wave Output: 1.5 v p-p, 5 nsec rise time
DC Output (Model 301A or 301AR only):
0 to +3.6 vdc for 0 to 360°
Z out less than 50Ω
AC Power Input: 115/230 v 50 to 400 Hz, 0.4 Amps rms
Case:
7" x 16½" x 11½". For 19" rack mount specify option R.
Weight: 18 lbs.; shipping, 27 lbs.

SERIES 302 PHASE METERS

Series 302 Phase meters have all of the features of Series 301A instruments with the addition of an easy to read Digital Display. Display ranges are 0 to 180° and 0 to 360°, with resolution up to 0.1°. Readout accuracy is ±0.2°. Analog output is standard on all 302 series instruments. In addition, BCD outputs are available. Except for the above differences, 302 specifications are identical to those of the 301 Series.

SERIES 305 PHASE METERS

FEATURES:

- No operating controls
- Excellent stability — no adjustments
- 0.1° accuracy independent of input voltage
- Versatile plug-in concept
- Rejects harmonics, distortion and noise
- Digital readout and outputs

Series 305 Phase meters represent a totally new concept in the measurement of phase angle. A precision phase angle measurement requires only connection of the signals and reading the 4 digit display. The 305 senses signal frequency and adjusts its output time constant for maximum speed commensurate with low ripple. Its unique design locks out high frequency noise. This instrument is also insensitive to waveform distortions which can cause errors of as much as 0.6° per % distortion in other instruments.

Three main frames provide a selection of outputs suited to the individual need. Two plug-ins available are: the Model 305-PA-3001, which achieves exceptional accuracy over a broad dynamic range by "auto ranging" in each channel; and the 305-PA-3002, with high accuracy over limited dynamic ranges. Other plug-ins can also be furnished.

SPECIFICATIONS — SERIES 305 MAIN FRAMES

MODEL 305 PHASE TO DC CONVERTER

Analog Output: −1.800 to +3.600 vdc. 10 mv/degree sensitivity. Time constant variable from 10 to 700 ms by signal freq.
Output stability: ±0.1° per month
Operating Modes: Zero to +360° and 0 to ±180°. Automatic switching at <−160°, >+160°, <+20°, and >+340°
Self-Check: −180°, Zero, +180°, and +360°
Error Rejection: False triggers due to high frequency noise are locked out for signal to noise ratios better than 10:1. Errors and fluctuations due to waveform disymmetry or low frequency noise reduced by at least 10:1
Input Power: 115 v - 50-400 Hz - ½ Amp.
Size: 3½" rack/portable package; 16" depth.
Weight: 20 lb.; shipping 30 lb.

MODEL 305A PHASE METER

Same as Model 305 with the addition of 3½ digit readout: 0 ±180.0° indication with −180° offset for coverage of +180° to +360°. ±0.2° accuracy (add to basic accuracy).

MODEL 305B PHASE METER

Same as Model 305 with the addition of full 4 digit readout: −180.0° to +360.0° indication. ±0.15° accuracy (add to basic accuracy). 1248 BCD Outputs. Read and hold on command.

305 SERIES PLUG-IN SPECIFICATIONS (WHEN IN MAIN FRAME)

Model	Freq. Range	Input Levels[1] (independent)	Accuracy[2] (w/independent level)
305-PA-3001	5 Hz to 500 Khz[3]	10 mv to 50 v rms direct; can be extended to 40 Kv rms with Tektronix probes.	±0.1°, 50 mv to 50 v rms from 50 Hz to 50 Khz
305-PA-3002	5 Hz to 500 Khz[3]	10 mv to 500 mv rms direct; can be extended to 500 v rms with Tektronix probes.	±0.1°, 50 mv to 500 mv rms from 50 Hz to 50 Khz

(1) Other levels available on special order.
(2) For sinusoidal signals; can be used with square wave inputs over limited frequency range. Contact plant for further information.
(3) Frequency limited by plug-in. Higher frequency plug-ins also available (up to 10 MHz).

See Section 4900 for our pages on Synchro Converters.

DRANETZ
ENGINEERING LABORATORIES INCORPORATED
PLAINFIELD, NEW JERSEY 07062 • TEL. (201) 755-7080

SERIES 220
LOG SAMPLING VOLTMETER

Direct digital readout of CW, Gated AC, or rapidly varying AC signals

FEATURES:

- Frequency range - 100 Hz to 1 Mhz
- Sample and hold output - analog and digital outputs
- Single or repetitive measurement to 1000 samples per second
- Sampling times down to 100 μsec
- Output independent of sampling time or duty cycle
- 84 db dynamic range - 300 μv to 5 v (to 5 kv with voltage probes)
- Logarithmic digital display and BCD outputs
- Complete programmability for either remotely controlled or computer controlled test systems

APPLICATIONS:

- High speed component testing
- Analysis of time-varying or transient effects
- Measurement of direct or reflected acoustical signals
- Measurement of signal burst levels applied to radiators or receivers.

The Model 220 Sampling Voltmeter is a gated, average responding voltmeter for measuring amplitude of AC signals during a short sampling time. Measurement can be made of rapidly varying CW signals, gated AC signals (tone bursts), or single shot AC signals. Measurements are made at any predetermined time in a selected period which can be as short as 1 cycle of the signal.

Sample and hold output circuitry, combined with internal logarithmic conversion, provide several simultaneous outputs: a digital panel meter reading directly in DBV (ref: 0 DBV = 1 v rms), a linear DC output, two logarithmic DC outputs, and a logarithmic digital output (BCD code) corresponding to the digital panel meter reading. Provision is made for insertion of an external DC signal which allows both the digital display and BCD output to correspond to other logarithmic parameters without effecting instrument calibration.

This instrument combines internal low and high pass filtering, a unique average responding detector, and logarithmic conversion to offer an exceptionally wide dynamic range, high sensitivity, wide frequency range, short sampling time and low susceptibility to noise and signal distortion compared to peak responding AC instruments.

SPECIFICATIONS

Signal Frequency Range: 100 Hz to 1 Mhz

Accuracy: ±0.3 db to 200 Khz, ±0.5 db 200 Khz to 1 Mhz

Resolution: Analog output - infinite Digital readout and output: 0.1 db

Dynamic Input Range: −70 to +14 dbv (ref. 0 dbv = 1.0 v rms) (0.3 mv to 5 v rms)

Input Circuit Configuration: Single ended, front and rear panel input jacks (BNC)

Signal Input Impedance: 1 megohm

Output Indication: (1) Digital panel meter: −70 to +14 dbv, ±199.9 db max. indication with external DC scaling input (2) DC analog outputs, Zo = 600Ω, drives 10kΩ min. load resistance:

A. Log, 0.05 v/db, +0.0 to +4.2 v out

B. Log, 1mv/db −70.0 mv to +14.0 mv (0 v dc out ref 1 vrms in)

C. Linear, +0.5 to +5 v dc

(3) BCD outputs, 12 lines (8-4-2-1 BCD)

Repetition Rate: Internal trigger generator approx. 10 samples/second. External trigger: 1 to 4 ms required between samples for analog DC outputs depending upon sample time; 10 msec min repetition rate for digital display and BCD outputs.

Sampling Period: Periods approx. 0.1, 0.3, 1, 3 and 10 msec. Requires min of 1 full cycle.

Filters: 0.1, 1 and 10 Khz high pass; 0.01, 0.1 and 1 Mhz low pass.

Sample and Hold Facility: Output transfers from level to level without discharge. DC outputs drift less than 0.2 db per minute after last sample. Digital output can be programmed for infinite hold.

Trigger Input (to initiate sampling): Square wave, pulse, or step, ±5 v peak, rise time < 50 μsec (10-90%) transformer input, ungrounded, input impedance approx. 5k ohms.

Delay Control to Mask Signal Transients: Below 0.5 Mhz, selectable cycle count 4 to 300 cycles; above 0.5 Mhz, selectable time delay of 8 to 600 μsec.

Monitor and Control Outputs: (1) Synchronizing pulses for external equipment. (2) AC monitor outputs: Filtered and unfiltered signal level approx. 2V pk-pk; filtered output has 0.5 volt pedestal indicating sampling time. (3) Fault indicating signals available at rear panel.

Visual Indicators: For overloads, correct sampling, sampling period, low and high pass filter selection, incorrect sampling and loss of signal input.

Compatibility: Compatible with Dranetz Gating/Timing Generator 206, and other pulse generators.

Programmability (rear connectors): Compatible with DTL and TTL; also operable by remote contact closures. Filter selection, sample period, timing and other functions are programmable.

AC Input Power: 115v, 50-60 Hz, 35 watts

Size: 3½" high x 17" deep x 17" wide equipped for 19" rack mounting.

Weight: 25 lbs.; Shipping, 35 lbs.

See Section 4900 for our pages on Synchro Converters.

ACT 1

Accurate Counter Timer Model 461

INTRODUCTION

Dynasciences Accurate Counter Timer (ACT 1) incorporates integrated circuitry to provide a small, lightweight, multi-purpose counter/timer with 10 millivolt sensitivity to measure frequency, period, multiple period, frequency ratio, multiple frequency ratio, time intervals and to totalize. Standard configuration provides a counting rate from DC to 20 MHz, and displays measured units on a seven-digit display with storage. The display includes an in-line decimal point and units annunciator. BCD output and remote programming are standard. A precision crystal oscillator controls the time base permitting time measurements with 0.1 microsecond resolution.

Versatility in circuit design permits optional eight-digit display, in-field modification extending the frequency measuring capability to 125 MHz, and both high and ultra-high stability oscillators.

SPECIFICATIONS

FREQUENCY MEASUREMENT
Range: D.C. to 35 MHz
Input: A Channel
Function: Frequency of A signal
Gate Times: 0.1 usec to 100 sec in decade steps
Readout: MHz, KHz or Hz with automatic decimal point
Accuracy: Plus or minus 1 count plus or minus time base error

PERIOD MEASUREMENT
Range: 0.1 usec to 10^9 sec (10^{10} with option No. CO1)
Input: A Channel
Function: Period of A signal
Frequency Counted: 0.01 Hz to 10 MHz in decade steps
Readout: usec, msec, sec, Ksec, with automatic decimal point
Accuracy: Plus or minus 1 count plus or minus time base error plus or minus trigger error

MULTIPLE PERIOD MEASUREMENT
Range: 0.1 usec to 10^9 sec (10^{10} with option No. CO1)
Input: A Channel
Function: Period of A signal x 10^m
Frequency Counted: 10 MHz
Multiplier: m = 0 to 9 decade steps
Readout: usec's
Accuracy: Plus or minus 1 count plus or minus time base error plus or minus $\frac{\text{trigger error}}{m}$

RATIO AND MULTIPLE RATIO MEASUREMENT
Range: D.C. to 20 MHz, both inputs
Input: A and B Channels
Function: B/A x 10^m
Multiplier: m = 0 to 9 decade steps
Readout: 7 digits (8 digits optional)
Accuracy: Plus or minus 1 count of B plus or minus $\frac{\text{trigger error of A}}{m}$

TIME INTERVAL MEASUREMENT
Range: 0.1 usec to 10^9 sec (10^{10} with option No. CO1)
Input: A and B Channels
Function: Time A to B
Frequency Counted: 0.01 Hz to 10 MHz in decade steps
Readout: usec, msec, sec, Ksec with automatic decimal point
Accuracy: Plus or minus 1 count, plus or minus trigger error A, plus or minus trigger error B, plus or minus time base error

SCALE MEASUREMENT
Range: 1 to 10^{16} (10^{17} with option No. CO1)
Input: A Channel
Function: Total pulses into A x m
Multiplier: m = 0 to 9 in decade steps
Pulse Pair Resolution: 50 ns. for 25 ns. min. width pulses
Readout: 7 digits (8 digits optional)
Accuracy: Absolute

A CHANNEL AND B CHANNEL
Input Impedance: 1 Megohm shunted by 30 pf max
Attenuator: x1, x10, and x100
Trigger Level Range: ±1 volt times attenuator setting (±0.1 volt in 10 MV setting)
Slope Selection: Positive slope or negative slope
Input Coupling: AC or DC
Overvoltage Protection: To 600 volts combined AC plus DC

A CHANNEL
Frequency Range: D.C. to 35 MHz
Input Sensitivity: 100 mv rms, D.C. to 35 MHz
10 mv rms, 10 Hz to 15 MHz

B CHANNEL
Frequency Range: D.C. to 20 MHz
Input Sensitivity: 100 mv rms, D.C. to 20 MHz
10 mv rms, 10 Hz to 15 MHz

EXTERNAL CLOCK INPUT
Frequency Range: 10 Hz to 15 MHz
Input Sensitivity: 1.0 volt rms
Input Impedance: 1000 ohms
Input Coupling: AC
Maximum Input: ±10 volts peak

CLOCK OUTPUT (10 MHz OUTPUT)
Frequency: 10 MHz
Output: 0.5 V rms into 1000 ohms

TRIGGER ERROR A AND B CHANNEL
Trigger error is less than 0.3% of one period for sinusoids having 40 db or more signal to noise ratio

BCD OUTPUT
Function: Provides electronic representation of display register along with positive going print command and hold-off control. (negative print command available).
Output Code: 8421 BCD
Output Levels: 7400 TTL Compatible positive true, positive level

REMOTE PROGRAMMING
Parameters: Remote selection of counter functions and counter time bases
Selection: Single line for each parameter. One line per time base
Input Levels: Switch to ground or saturated NPN transistor capable of accepting 10 mA when on

MECHANICAL SPECIFICATIONS
☐ **Height:** 3.5 inches ☐ **Width:** 17.0 inches
☐ **Length:** 16.25 inches ☐ **Weight:** 16.0 lbs.

POWER REQUIREMENTS
☐ **Voltage:** 115 or 230 VAC
☐ **Frequency:** 50-60 or 400 Hz ☐ **Input Power:** 45 watts

OPTIONS AVAILABLE

CO1 EXTENDED DISPLAY REGISTER
Function: Adds eighth display position

CO2 ULTRA-HIGH STABILITY OSCILLATOR
Time Base Frequency: 10 MHz
Crystal Frequency: 1 MHz
Aging Rate: ±1 x 10^{-9} per day
Temperature Stability: ±5 x 10^{-9} from 0°C to 50°C
Input Power (115 V or 230 V) must be specified at time of order
Crystal and Oscillator are enclosed in oven and oven remains operating when power switch on counter is off. Oven power is supplied from a D.C. voltage regulator.

CO3 125 MHz PRE-SCALER
Function: Increases maximum counting rate to 125 MHz
Frequency Range: 10 Hz to 125 MHz
Input Sensitivity: 100 mv rms
Input Impedance: 1 Megohm shunted by 30 pf max.
Input Range for Proper counting: 100 mv to 100 Volts rms—
10 Hz to 10 MHz
10 MHz to 125 MHz
100 mv to 10 Volts rms—
Input Coupling: AC
Overvoltage Protection: To 600 Volts combined D.C. plus A.C.

CO4 HIGH STABILITY OSCILLATOR
Time Base Frequency: 10 MHz
Crystal Frequency: 5 MHz
Aging Rate: ±1 x 10^{-8} per day
Temperature Stability: ±1 x 10^{-7} from 0°C to 50°C

CO5 RACK ADAPTER MOUNTING INCLUDING SPECIAL SIDE PANEL COVERS

EXTERNAL FREQUENCY STANDARD INPUT
Frequency Accepted: 1 MHz
Input Sensitivity: 1.0 volt rms
Input Impedance: 1000 ohms
Maximum Input: 2 volts rms

TIME BASE
Time Base Frequency: 10 MHz
Crystal Frequency: 5 MHz
Aging Rate: ±3 x 10^{-7} per day
Temperature Stability: ±4 x 10^{-6} from 0°C to 50°C

TIME BASE OUTPUT
Frequency: 0.01 Hz to 10 MHz in decade steps
Amplitude: 3.5 volts p-p, nominal (TTL Compatible)
Output Impedance: 200 ohms, nominal

PRICE

Standard Configurations: $1295.
Option CO1, Eighth Digit: $100.
Option CO2, Ultra-high Stability Oscillator: $475.
Option CO3, 125 MHz Pre-scaler: $425.
Option CO4, High Stability Oscillator: $185.

DM 414 MAXI RANGER

DM 414 Specifications — Standard Multimeter and Options

Ranges and Accuracy: DC volts: .05% (.02% optional) R* + .01% F.S. in 10, 100 and 1000 mV ranges.—.05% (.01% optional) R* + .01% F.S. for 10, 100 and 1000 V ranges. 100% overrange.

DC current: .05% R + .01% F.S. in 10, 100, 1000 μamp and 10, 100 and 1000 mA ranges. 100% overrange.

Resistance: .05% R + .01% F.S. in 10, 100, 1000 ohm and 10K, 100K and 1000 Kohm ranges. .5% R + .05% F.S. in 10 Megohm range. 100% overrange.

Optional AC volts 50 Hz to 10K Hz: — 1% F.S. in 100 and 1000 mV, 10, 100 and 1000 V ranges. 100% overrange.

Optional AC current 50 Hz to 10 KHz: 1% F.S. in 10, 100 and 1000 μamp and 10, 100 and 1000 milliamp ranges. 100% overrange.

Stability: Accuracy will remain as specified for not less than 90 days from calibration over the temperature range of 15°C to 35°C.

Reading Time: 10 readings per second at full scale.

Common Mode Rejection: >100 dB at 60 Hz and its multiples, with 1KΩ source imbalance.

Normal Mode Rejection: >30 dB at 60 Hz (integration).

Automatic Range Change Time: Less than 1 sec.

Input Current: 10^{-9}A (All DC voltage ranges).

Specifications subject to change without notice. * R = Reading

FIRST LOW PRICED DVM TO MEET THE REQUIREMENTS OF THE DESIGN ENGINEER, PRODUCTION DEPARTMENT, AND THE CAL LAB, IN A SINGLE LOW-PRICED INSTRUMENT

FROM $795

TANDARD FEATURES

C Volts: 1 μV/digit to 1000 V (6 ranges)
esistance: 4 wire Kelvin measurements, 1 Milliohm to 10 Megohms. F.S. (7 ranges)
C Current: 1 na/digit to 1 amp (6 ranges)
00% overrange

PTIONS

C Volts: 10 μV/digit to 1000 V (5 ranges)
C Current: 1 na/digit to 1 amp (6 ranges)
splay Storage — Autoranging — BCD Outputs (1248 T²L Compatible) — Rack Mounting

SPECIAL FEATURES

Extensive MSI for reliability, compact size, and low weight
High Common Mode and Normal Mode Rejection (see specifications above)
Rugged Cyclolac® Cabinet: Strong, lightweight. Scratches and mars don't show
Overload Protection: 1100 VDC or peak AC on DCV ranges, 300 VDC or peak AC on all other ranges
Automatic Polarity: On DC, mV and Current functions
Combination Handle/Tilt Bar: Standard equipment. Adjusts to any convenient viewing angle

XPENSIVE DVM FEATURE & CAPABILITY AT VERY LOW COST

DM 330 BASIC SPECIFICATIONS

Display: 3 full digits, reads 1500 at full scale. Polarity, range, and units. With AC option — AC volts.

Ranges: DC Volts: ±1 mv/digit to ±1000V full scale. DC input resistance, 10 meg Ω constant. DC current: ±1 na/digit to ±10 ma full scale, (Higher ranges optional).

AC volts (optional): 50 Hz to 10 KHz with 10 megohm input resistance shunted by 110 pF.

Resistance: 1Ω/digit to megohms, full scale.

EATURES

ull Multimeter Capability: DC volts, AC volts, DC current, KΩ measurements, all built in

igh Accuracy: ±.1% ±1 digit on DC volts, KΩ and current functions. ±1% ±1 digit on AC volts

100 dB Common Mode Rejection

Unique Current Measurement Circuit: Provides sensitivity of 1 na/digit

High Speed Readings: Up to 10 readings/sec.

Portable: 7½ lbs. ½ rack size (8½" wide x 3½" high x 12" long)

Overrange Capability: 3 full digits plus overrange digit (50%)

DM 330 (with AC volts): $399

DD 330 (without AC): $369

PHASE ANGLE MEASUREMENT AND STANDARDS

Instrumentation for the measurement and generation of phase angle. This advanced measurement technique is recognized as the finest throughout the world. For complete information contact Dytronics Company Inc., 4800 Evanswood Drive, Columbus, Ohio 43224.

Model Number	Frequency Range	Accuracy	Measure Phase?	Shift Phase?	0° to 360° Coverage Without Ambiguity?	Applications & Features
 301A $910	10hz - 30khz	±2°	Yes	Yes	Yes	(1) General laboratory & testing use. (2) Phase indicated on continuous 360° dial.
 311/RT-1/717s $7,800	30hz - 10khz	±0.015	Yes	Yes	Yes	(1) Primary Phase Angle Standard for metrological applications. (2) Self-calibrating. (3) Resolution of 12 microdegrees. (4) Up to 125 volt input signal level.
 341 $1,180	400hz or other specified single frequency	±0.1°	Yes	Yes	Yes	(1) For applications requiring high accuracy at a single frequency. (2) Dials read degrees in decimal form. (3) Not influenced by harmonics.
 400K $480	375hz-425hz	±0.05°	No	Yes	No	(1) Produces precision 90° phase shift. (2) For applications requiring precise quadrature voltage.
 401 $790	Any single frequency from 50hz to 50khz	±0.01°	No	Yes	No	(1) Produces very precise 90° phase shift. (2) Frequency is changed by plug-ins. (3) 115 volts output.
 410 $1830	0.1hz-120khz	±0.15°	No	Yes	Yes	(1) General laboratory Phase Angle Standard. (2) High accuracy over broad frequency range.
 312 $4,300	4khz - 500khz	±0.03°	Yes	Yes	Yes	(1) Primary Phase Angle Standard for metrological applications. (2) Self-calibrating. (3) Resolution better than 12 milli-degrees. (4) Up to 15 volt rms input signal level.

address-o-print™ Dytro logmatic® pdvm®

Lister Printer

SERIES 1000

- Digital Lister Printer—DVM Compatible
- Unique Echo-Check Feature for Reliable Printed Data
- Designed for OEM Use
- Direct Interface, No User Added Circuitry Needed
- Includes Power Supplies
- 10 Column Capability—2, 10 or 12 Elements per Column
- Parallel BCD Entry—Parallel Decimal, Excess 3, Excess 3, Gray and Serial Codes Available
- Counting Capability
- Floating Decimal Points
- Programmable Print Color and Paper Advance
- Auto Zero Suppression
- Overrange Digit
- Clock Option, Clock Printout on Each Print Line, Example: 11:59+937 V.
- Decimal Readout, one of ten Contact Closure for Each Decade
- Programmable Function Identification (+, —, V. MA, MV, etc.)
- Serialization (Log Identifying Digits)
- Easy Paper Loading
- Reliable Data • Extended Life • Shortened Cycle Time

(Address-O-Print Averages 1/2 Cycle per Printout vs. Full Cycle for Incrementing Type Printers)

FORMAT-ASSISTED DATA INTERPRETATION

Printing Digital Voltmeter

SERIES 8040

- **CONVERTS** 0-1100 Volts DC in 3 ranges into 4 digits (plus overrange) and autopolarity. AC and Resistance options
- **IDENTIFIES** Two additional digits indicate which of 100 readings has been made.
- **DISPLAYS** all eight data elements: logging numbers, polarity, reading, and range (decimal point).
- **PRINTS** the complete display, in single or multiple copies, on command or automatically.

- Available in OEM Versions
- 2, 3 and 4 digits
- Card/Ticket PDVM's
- Up to 5 Digit Ratio Capability
- Hi/Lo Limit Checking
- Self Check Mode
- Manual/Auto Print
- Scanner/Multiplexer Available
- Clock for Auto/Read and Printout
- BCD and 10 Line Codes Available as Outputs
- Rack Mounting Versions Available
- Reset/Preset of Log Digits
- Inkless Printing
- Paper Tape Punch (ASCII) Ability
- Complete Data Logging Systems Using the 8040 PDVM Available, Tailored to Specific Customer Needs

PDVM APPLICATION AREAS:

- Automatic Potentiometer Checker
- Pollution Monitoring Data Loggers
- Medical—Clinical Lab Equipment
- Process-Control Monitoring
- Ships Data Logger

OEM DIGITAL CASSETTE TAPE SYSTEMS

AVAILABLE FEATURES & APPLICATIONS

- Minicomputer Interfaced Keyboard to Cassette
- Multiplexed A/D Entry
- Cassette To: 7 or 9 Track Tape, TTY, Punched Card, Paper Tape
- Write Only, Read Only, Read/Write, Read After Write
- Parity Detection
- Error Correction Codes
- Tape Sensing—BOT, EOT, and EOT Warning
- Inter-Record Gap—0.1" Inches Min.
- Automatic Self Test Features
- Synchronous or Asynchronous Operating Modes
- Data Rate: 3.75 KC Typical
- Data Capacity: 4 Million Bits
- Fast Forward/Fast Reverse Capability
- Address Capability
- Correction Capability
- Stack Loader/Reader
- Unequal Read/Write Speeds

PORTABLE CASSETTE DATA LOGGER

- Battery Operated
- Self-Contained A/D Converter

Dytro also manufactures other analog card/ticket printers, cassette tape checkers, hybrid & digital acquisition, recording, formatting and printing equipment.

DYTRO / originators of the PRINTING DIGITAL VOLTMETER

20 Hz to 18 GHz Autohet™ Frequency Counter

Now for the first time, automatic frequency measurements can be made from 20 Hz to 18 GHz with no sacrifice in performance. To provide this broadband coverage EIP has developed an Autohet Frequency Counter that uses two digitally programmed YIG-tuned converters to translate any CW input signal into the range of a direct reading 200 MHz counter. The basic technique is similar to that of the widely used manually tuned hetrodyne converters; therefore it measures frequency, even of signals with considerable FM, in the shortest possible time (30 to 1000 times faster than any other available automatic counters).

FEATURES

- **Completely automatic operation.**
- **Continuous frequency coverage.**
  20 Hz to 12.4 GHz — Model 350A
  20 Hz to 18.0 GHz — Model 351A
- **11-digit direct readout.**
- **No susceptibility to signal FM.**
- **Pushbutton display blanking.**

SPECIFICATIONS

FREQUENCY COUNTER

RANGE: 20 Hz to 210 Hz.
SIGNAL INPUT:
Minimum Sensitivity: 100 mV rms.
Maximum Input: 100 V.
ACCURACY: ± 1 count ± time base stability.
GATE TIME: Fixed at 0.1 second (rear panel FREQ x 10 switch extends gate time to 1.0 second).
DISPLAY: 11 digits sectionalized to read GHz, MHz, KHz, and Hz (least significant digit is a permanent zero).
TIME BASE:
Crystal Frequency: 1 MHz.
Aging Rate: $<$ 7 parts in 10^9 per 24 hours after 30 days continuous operation.

AUTOHET CONVERTER

RANGES: 210 MHz to 1.2 GHz and 1.2 GHz to 12.4 GHz (350A) or 1.2 GHz to 18.0 GHz (351A).
SIGNAL INPUT:
Minimum Sensitivity: 100 mV rms (−7 dBm) for frequencies between 210 MHz and 12.4 GHz. 160 mV rms (−3 dBm) for frequencies between 12.4 GHz and 18.0 GHz (351A only).
Maximum Input: 1 V rms (+13 dBm) for inputs to 210 MHz to 1.2 GHz range. 0.7 V rms (+10 dBm) for inputs to 1.0 GHz to 12.4 GHz or 18.0 GHz range.
Maximum Input Without Damage: 2.2 V rms (+20 dBm).
Impedance: 50 ohms nominal.
ACCURACY: Maintains counter accuracy.
OPERATION: Completely automatic after setting Range switch.
OPERATING TEMPERATURE: 10° to 55°C.

GENERAL

REMOTE RESET: Contact closure to ground at rear panel BNC connector resets display to zero and initiates single read cycle.
POWER: 115V or 230V ± 10%, 50 to 60 Hz, 70 watts.
WEIGHT:
Net: 26.5 lb. (12.1 kg).
Shipping: 31.0 lb. (14,2 kg).
DIMENSIONS: 3½" High, 16¾" Wide, 15¼" Deep.
PRICE: Model 350A — $4,450.00.
Model 351A — $5,450.00.
OPTION 03: High Stability Time Base.
Crystal Frequency: 1 MHz.
Aging Rate: 1 part in 10^9 per 24 hours after 48 hours operation.
Price: Option 03, add $550.00.
OPTION 04: Digital Output.
BCD Code: 8421 "I" state positive.
Price: Option 04, add $100.00.

Model 1640 series Arbitrary Function Generators provide an easily programmable source of repeatable abitrary functions programmed by tape or direct output from a storage device. Non repetitive cyclic or block cyclic functions can be obtained with DC offset using ramp or optional haversine

Model FSM530 series Synthesizer Signal Generators operate from 300 Hz to 470 MHz with stability of 3.10^{9}/day. Spectral purity offers non harmonic spurious greater than 80 dB down, phase noise less than 0.06°. Full modulation facilities included for AM, FM, Pulse and Phase.

FUNCTION GENERATORS AND DYNAMIC ANALYSIS INSTRUMENTATION

DESCRIPTION	FEATURES
FREQUENCY RESPONSE ANALYZER MODEL 1410	Suitable for testing DC and AC control systems in the 0.001 Hz to 10 kHz range; sine or square output. Fully digital unit measures amplitude and phase to within ±1% and ±½° respectively. Has 40 dB harmonic and noise rejection. Options include, programming, analog outputs, log readout.
PROGRAMMER MODEL 1450	Paper tape programmer with photo electric reader provides full programming for Model 1410 Frequency Response Analyzer.
ARBITRARY FUNCTION GENERATOR MODEL 1641	Provides output of any cyclic or non recurrent function consisting of linear ramp segments or optional haversines. Controlled by built in photoelectric reader; ramp times 99 seconds/ramp to 1 millisec/ramp with 0.1% accuracy. Output level 0 to ±10 volts in 2000 step increments.
ARBITRARY FUNCTION GENERATOR MODEL 1642	As for Model 1641 but without photoelectric reader. Accepts input from external program store devices such as computer, magnetic tape, etc.
TRANSFER FUNCTION ANALYZER MODEL JM1600A	Readout in cartesian, polar and log polar co-ordinates of amplitude and phase in range 0.00001 Hz to 480 Hz. Fully isolated and floating inputs, accuracy 0.1% amplitude 10 minutes of arc phase. 140 dB DC and 66 dB AC common mode rejection. Fully programmable. May be locked to external source using Mechanical Reference Synchronizer JX1606.
HIGH FREQUENCY EXTENSION UNIT MODEL JX1639	Extends operation of JM1600 series Transfer Function Analyzer up to 160 kHz.
TIME DOMAIN ANALYZER MODEL JM1680	Basically a programmable DC coupled True RMS DVM extending to 10 kHz the analyzer measures Mean Value, Mean Modulus or True RMS of a deterministic or random input signal. Unit offers exponential or True Time Averaging modes with ranges from 99.9 mV to 300 V and accuracy of ±1% of reading. Function as correlator in conjunction with Model 1861 Random Generator.
PSEUDO RANDOM GENERATOR MODEL 1861	Provides binary and multilevel sequencies with lengths from 31 bits to 1047k bits and clock rates from 10^{-3} Hz to 1 MHz. Also delayed output sequence with delay either manually or automatically incremented. When used with JM1860 becomes Impulse Response Test Set.

FREQUENCY SYNTHESIZER SIGNAL GENERATORS

H.F. TWOTONE SIGNAL GENERATOR MODEL SSB 30 SERIES	Tuneable SSB Signal Generator has stability 1×10^{-9}/day. Upper or lower sideband switch selected. Sideband separation variable 300 Hz to 10 kHz over carrier range 300 Hz to 32 MHz. Carrier suppression independently variable — 40 dB. Versions offer smallest vernier increment from 0.1 Hz to 100 Hz.
VHF SYNTHESIZER SIGNAL GENERATOR MODEL FSM 530 SERIES	Range 300 Hz to 470 MHz with stability 1×10^{-9}/day. Modulation facilities include AM, FM, Pulse and Phase mod. spurious output $>$ 80 dB down phase noise $<$ 0.06° can be battery operated.
SYNTHESIZER FREQUENCY METER MODEL FSX3000 SERIES	Unit provides usual synthesizer outputs up to 100 MHz plus comb generator minimum 10 mV up to 3 GHz (useable up to 5 GHz) built in zero beat detector with chart drive output for stability histograms. Stability better than 1×10^{-9} per day.

We have eleven ways to improve your product.

Plus a lot of extras.

When you have the reputation for making a top quality product, you build it with the finest components available — from the smallest resistor to the most complex integrated circuit. And when it comes to incorporating a digital meter in your product, you want the best money will buy.

Electro-Numerics has a complete line of high quality digital panel meters and multimeters designed specifically for OEM applications. We have eleven meters to choose from, with a list of options second to none. And if we don't have a meter to fit your need, we'll design one. And deliver a prototype within 60 days. What more could you ask for?

Our Two-Year Warranty.

Get the complete story. Write for our data sheets today. Or better yet, call your local Electro-Numerics representative for a demonstration. You'll find him listed in the back of this book.

CPTC SERIES

CPTC-10K

5,000 to 100,000 watts average power

Frequency range to 10 GHz

Completely self-contained, requiring only a power line connection

Nominal input impedance is 50 ohms — other available.

hese units are fully self-contained, corporating an oil-filled termination, oil to air heat exchanger and circu-ting system.

ressure, flow and temperature inter-cks insure complete protection for oth transmitter and termination.**

lthough 50 ohms is the standard input npedance for this series, impedances f 72, 300 or 600 ohms can be sup-lied. Please specify all requirements hen ordering.

* On most units.

CLW-253

- **ECONOMICAL** — Use only tap water to absorb heat dissipated by resistive elements
- **COMPACT** — Smaller and lighter than Oil-Filled Terminations with corresponding power ratings
- **HIGH OVERLOAD CAPACITY** — Resistive element is practically indestructible
- Cooling Units can be supplied for closed system operation
- Available in three frequency ranges to 1 GHz*
- Nominal impedance is 50 ohms. Other impedances available
- Specify connector type desired when ordering
- Use with Tap Water Calorimeter

Model	Max. Power Watts	Frequency Range	VSWR**
CLW-14	10,000	DC-1GHz	1.25
CLW-253	25,000	DC-1GHz	1.25
CLW-54	50,000	DC-1GHz	1.25
CLW-15	100,000	DC-1GHz	1.25
CLW-25	200,000	DC-1GHz	1.25

* DC-32MHz, DC-110MHz, DC-1GHz.
** Values for DC-1GHz range. Lower for other ranges.

DACT SERIES CONVECTION COOLED

UNIQUE 25-MONTH WARRANTY!

DACT-14

ABSOLUTELY NO MAINTENANCE!

NO POWER REQUIREMENT!

Power Ratings Available:
3,000, 5,000, 10,000, 15,000 20,000 watts.

VSWR:
1.1:1.

Frequency Range:
Standard to 30 MHz — Models available to 55 MHz.

Impedance:
50 ohms standard. 72, 300, 600 ohms available.

Maximum Ambient Temperature:
52°C. No minimum!

Mounting Orientation:
Non-critical.

UNITS MAY BE PULSED

ELECTRONIC DEVELOPMENT CORPORATION

precision engineered AC/DC voltage and current calibrators

(also standards, sources and references)

DC Voltage Standards

All solid state. Short circuit and overload proof. Fully automatic recovery and zero balance. 30 second warm-up. Stability better than .001% of setting per day.

MODEL	VS-11	VS-111	VS-1000
E_{out}	±11.1110 v	±111.110 v	±1111.110
I_{out}	50 mA	50 mA	10 mA
Absolute Accuracy	±0.005%	±0.005%	±0.007%
Z_{out}	.02Ω	0.1Ω	0.1Ω
Weight	8 lbs.	9 lbs.	20 lbs.
Prices	$670	$870	$1250

Options: *Rack Mountable* — $25 additional (add "R" to model number). *Null Meter* — differential measurements with built in null detector. ∞ Z at null — $25 additional (add "N" to model number).

Electronic Galvanometer — differential measurements with built in, protected meter. Input impedance: ∞ at null, 1 MΩ off null, sensitivity 25 μV—$200 additional (add "G" to model number).

Applications: Calibrators, standards, references, sources and power supplies. EDC DC Voltage Standards are used in calibration laboratories, design and engineering laboratories, field service and production line Q.C.

DC Voltage Standards (special purpose)

EDC introduces a new **Low-Impedance DC Millivolt Standard (Model MV-105)** and a new **DC Nanovolt Standard (Model MV-106).** All solid state. Short circuit and overload proof. Fully automatic recovery and zero balance. 30 second warm-up. Stability better than .001% of setting per day.

MODEL		MV-100	MV-105 (NEW)	MV-106 (NEW)
E_{out} Ranges	(1)	±11.1110 v	±11.1110 v	±11.11110 v
	(2)	±111.110 mV	±111.110 mV	±111.1110 mV
	(3)	—	—	±11.11110 mV
Resolution	(1)	100 μV	100 μV	10 μV
	(2)	1 μV	1 μV	100 nV
	(3)	—	—	10 nV
I_{out} Volt Range		50 mA	50 mA	50 mA
Z_{out}	(1)	.02Ω	.02Ω	.02Ω
	(2)	20Ω	1.0Ω	10Ω
	(3)	—	—	10Ω
Accuracy (limit of error)	(1)	±.005%	±.005%	±.005%
	(2)	±.01%	±.01%	±.01%
	(3)	—	—	±.01%
Weight		8 lbs.	8 lbs.	8½ lbs.
Prices		$770	$775	$950

Options: For *rack mountable models, null meters,* and *electronic galvanometers* see "options" listed above.

Applications: Thermocouple and transducer calibration, simulation and measurements. Recorder calibration and linearity. Transducers: bridge excitation. Amplifiers: checking gain and linearity.

Digitally Programmable DC Voltage Standards

True digital programming from BCD logic signals. Serial by digit or parallel entry. Sign and each decade independently selected. The output is isolated from both the chassis and the control circuit. Short circuit and overload protected, fully automatic recovery.

MODEL	MV-100P (NEW)	VS-11P	VS-111P
E_{out}	166.65 mV	±11.110 v	±111.10 v
Accuracy	±0.015%	±0.01%	±0.01%
I_{out}	N/A	50 mA	100 mA
Z_{out}	20Ω	.03Ω	0.1Ω
Prices	$1160	$1020	$1195

Digital programming: Input programming readers such as punch paper tape, punch card, incremental magnetic tape, pin board, programmer drum, stepping switches or key board.

Memory features: Preserves the register contents without maintaining digital inputs. Programmer can then be used for other functions.

Options: Detailed specifications on these and other models on request.

Multi-purpose Voltmeter and Calibrator

VM,
VM,
nd
ource

EDC has been building exclusively solid state instrumentation for 12 years. The **Model 2900** is our latest achievement.

This instrument is a highly versatile transistorized voltmeter, differential voltmeter (infinite impedance null detector) and DC voltage calibrator at a very low cost.

NEW

MODEL EDC 2900

INPUT SPECIFICATIONS

TVM Mode:	
E_{in}	10 μV to 1200 Vdc in 8 ranges
Z_{in}	20 MΩ
Resolution	1 ppm
ΔVM Mode:	
E_{in}	10 μV to 1200 Vdc
Z_{in}	∞ at null, 20 MΩ off null
Sensitivity	10 μV

OUTPUT SPECIFICATIONS

Accuracy	±0.002%
Output	10 nV to ±111.1110 Vdc in 4 ranges
Resolution	1 ppm
Stability	.0005% day
Current	100 mA
Z_{out}	30 milliohms
Weight	10 lbs.
Price	$1190

Recorder output terminals available at rear panel

DC Current Standards

Short circuit and open-circuit proof. 30 second warm-up. Automatic zero.

NEW

MODEL	CR-10	CR-100	CR-102
OUTPUT			
I mode	±11.1110 mA	±111.110 mA	±111.110 mA
E mode	±11.1110 Vdc	—	±11.1110 Vdc
COMPLIANCE			
I mode	50 V	100 V	125 V
E mode	50 mA	N/A	100 mA
Accuracy	±0.01%	±0.01%	±0.01%
Prices	$900	$975	$1100

Options: *Null detector* built in and protected for differential voltage measurements. ∞ Z at null. $25 additional (add "N" to model number).

Rack Mountable — $25 additional (add "R" to model number).

Applications: Transducer, relay characteristics, precision checking of zener diodes, calibration of gyro torquers, relays, controllers and recorders.

AC Voltage (RMS) Standards

Completely solid state. Short circuit protection. 60 second warm-up. Automatic zero. Low output impedance. Fully self-contained and portable.

NEW

MODEL	AC-1000	AC-200	AC-100
E_{out}	100 μV to 1111.110 V in 2 ranges	100 μV to 211.110 V in 2 ranges	1 mV to 111.110 V
Resolution	10 μV & 1 mV	10 μV & 1 mV	1 mV
E Accuracy	0.05%	0.05%	0.05%
Burden	50 VA or 2 Amps	25 VA or 1 Amp	100 mA
Frequency Range	45 Hz to 5 kHz	30 Hz to 20 kHz	10 Hz to 50 kHz
	Unlimited number of frequencies attained by use of external oscillator via front panel terminals		
5 Internal Frequencies	50, 60, 400 Hz, 1 kHz + Optional f	50, 60, 400 Hz, 1 kHz + Optional f	line only
Z_{out}	.001Ω to 1Ω	.001Ω to .2Ω	.001Ω to .1Ω
Distortion	0.1%	0.1%	0.1%
Weight	50 lbs.	45 lbs.	30 lbs.
Prices	$2690	$2490	$2190

Applications: Calibration of VOM, DVM, VTVM; design and evaluation of amplifiers, converters, filters, rectifiers, filter regulators, demodulators, transformers, and inductors; power source for servo applications.

All EDC instruments are traceable to the U.S. National Bureau of Standards. Certification supplied with each instrument / All instruments are available under GSA Contract / Export prices slightly higher / Line (Mains) power: 115 Vac, 60 or 400 Hz; or 220 Vac, 50 Hz / Instruments available for no-charge evaluation. Contact your local sales representative or the main plant.

ELGENCO NOISE GENERATORS

SOLID STATE NOISE GENERATORS

FIXED RANGE NOISE GENERATOR CARDS

AMPLITUDE PROBABILITY DISTRIBUTION: Symmetrical non-clipped Gaussian waveform.
OUTPUT LEVEL: (open circuit) 3 volts rms.
AMPLITUDE CONTROL: Continuously variable.
SIZE: 4½" x 6½" x 1".
POWER: —30 volts dc.

SERIES 3602A, 3603A, and 3606A

OUTPUT IMPEDANCE: 600 ohms ±10%.
MAX. LOAD: 300 ohms.

Some of the many frequency ranges available are listed below. Write for further information.

MODEL 3602A
-12124 20 Hz to 20 kHz ±1db $174
-11124 10 Hz to 20 kHz ±1db $209
-12154 20 Hz to 50 kHz ±1db $194
-11154 10 Hz to 50 kHz ±1db $229

MODEL 3603A
-12115 20 Hz to 100 kHz ±1db $214
-11115 10 Hz to 100 kHz ±1db $249
-12125 20 Hz to 200 kHz ±1db $229
-11125 10 Hz to 200 kHz ±1db $264
-12155 20 Hz to 500 kHz ±1db $249
-11155 10 Hz to 500 kHz ±1db $284

MODEL 3602A
-22154 20 Hz to 50 kHz ±2db $174
-21154 10 Hz to 50 kHz ±2db $209
-22115 20 Hz to 100 kHz ±2db $179
-21115 10 Hz to 100 kHz ±2db $214
-22125 20 Hz to 200 kHz ±2db $199
-21125 10 Hz to 200 kHz ±2db $234
-22155 20 Hz to 500 kHz ±2db $214
-21155 10 Hz to 500 kHz ±2db $249
-32155 20 Hz to 500 kHz ±3db $174
-31155 10 Hz to 500 kHz ±3db $209

MODEL 3606A
-52124 20 Hz to 20 kHz ±½db $299
-51124 10 Hz to 20 kHz ±½db $334
-52154 20 Hz to 50 kHz ±½db $319
-51154 10 Hz to 50 kHz ±½db $354
-52115 20 Hz to 100 kHz ±½db $339
-51115 10 Hz to 100 kHz ±½db $374
-52125 20 Hz to 200 kHz ±½db $354
-51125 10 Hz to 200 kHz ±½db $389
-52155 20 Hz to 500 kHz ±½db $374
-51155 10 Hz to 500 kHz ±½db $409

SERIES 3607A

OUTPUT IMPEDANCE: 200 ohms ±10%
MAX. LOAD: 700 ohms.

Some of the many frequency ranges available are listed below. Write for further information.

MODEL 3607A
-15316 5 kHz to 1 mHz ±1db $345
-35316 5 kHz to 1 mHz ±3db $195
-25356 5 kHz to 5 mHz ±2db $570
-35356 5 kHz to 5 mHz ±3db $460

SOLID STATE NOISE GENERATORS

Model 602A-200 5 Hz to 5 mMz, 3 Ranges . . . $395

FREQ. RANGES: 5 Hz to 20 kHz, 5 Hz to 500 kHz, 5 Hz to 5 mHz.
OUTPUT SPECTRUM: 20 Hz to 20 kHz — ±1 db, 20 Hz to 500 kHz — ±2.5 db, 500 kHz, to 5 mHz — ±5 db.
OUTPUT LEVEL: (open circuit), 20 kHz range — 3 volts, 500 kHz range — 2.5 volts, 5 mHz range — 2 volts.
OUTPUT IMPEDANCE: 200 ohms ±10%.
MAXIMUM LOAD: (on direct output) 700 ohms.
OUTPUT STEP ATTENUATOR: X1.0, X0.1, X.01, X.001, and X.0001; calibrated to work into open circuit.
Accuracy: ±3% to 100 kHz, ±10% to 5 mHz.
Output Impedance: 200 ohms ±1%.
SPECTRAL DENSITY: Approximate spectral density (mv/√Hz) for 1 volt rms output. 20 kHz band — 5, 500 kHz band — 1.2, 5 mHz band — 0.4.
AMPLITUDE PROBABILITY DISTRIBUTION: Symmetrical non-clipped Gaussian waveform all ranges.
OUTPUT METER: 0-5 volts rms.

Model 602A-1390 5 Hz to 5 mHz, 3 Ranges . . $330

FREQ. RANGES: 5 Hz to 20 kHz, 5 Hz to 500 kHz, 5 Hz to 5 mHz.
OUTPUT SPECTRUM: 20 Hz to 20 kHz — ±1 db, 20 Hz to 500 kHz — ±3 db, 500 kHz, to 5 mHz — ±8 db.
OUTPUT LEVEL: (open circuit), 20 kHz range — 3 volts, 500 kHz range — 2 volts, 5 mHz range — 1 volt.
OUTPUT IMPEDANCE: 900 ohms ± 10%.
MAXIMUM LOAD: (on direct output) no limit.
OUTPUT STEP ATTENUATOR: X1.0, X0.1, X.01, X.001, and X.0001; calibrated to work into open circuit.
Accuracy: ±3% to 100 kHz, ±10% to 5 mHz.
Output Impedance: 200 ohms ±5%.
SPECTRAL DENSITY: Approximate spectral density (mv/√Hz) for 1 volt rms output. 20 kHz band — 5, 500 kHz band — 1.2, 5 mHz band — 0.6.
AMPLITUDE PROBABILITY DISTRIBUTION: Symmetrical non-clipped Gaussian waveform all ranges.
OUTPUT METER: 0-5 volts rms.

Model 603A 5 Hz to 5 mHz, 3 Ranges $545

FREQ. RANGES: 5 Hz to 20 kHz, 5 Hz to 500 kHz, 5 Hz to 5 mHz.
OUTPUT SPECTRUM: 10 Hz to 500 kHz — ±1 db, 500 kHz to 5 mHz — ±3 db.
OUTPUT LEVEL: (open circuit) 3 volts rms all ranges.
OUTPUT IMPEDANCE: 200 ohms ± 10%.
MAX. LOAD: (on direct output) 700 ohms.
OUTPUT STEP ATTENUATOR: X1.0, X0.1, X.01, X.001, and X.0001; calibrated to work into open circuit.
Accuracy: ±3% to 500 kHz, ±5% to 5 mHz.
Output Impedance: 200 ohms ± 1%.
SPECTRAL DENSITY: Approximate spectral density (mv/√Hz) for 1 volt rms output. 20 kHz band—5, 500 kHz band—1.2, 5 mHz band — 0.4.
AMPLITUDE PROBABILITY DISTRIBUTION: Symmetrical non-clipped Gaussian waveform all ranges.
OUTPUT METER: 0-5 volts rms.

MODEL 3609A Power Supply Card $67

(supplies power for up to 2 noise generator cards)
SIZE: 4½" x 6½".
INPUT: 115/230 volts ±10/20 volts, 50 to 1000 Hz.

SOLID STATE NOISE GENERATORS

Model 610A 5 Hz to 5 mHz, 8 Ranges $1,275

FREQ. RANGES: 5 Hz to 2 kHz, 5 Hz to 5 kHz, 5 Hz to 20 kHz, 5 Hz to 50 kHz, 5 Hz to 200 kHz, 5 Hz to 500 kHz, 5 Hz to 2 mHz, and 5 Hz to 5 mHz.
OUTPUT SPECTRUM: Uniform ± 0.5 db from 10 Hz to 500 kHz and ± 2.0 db from 500 kHz to 5 mHz.
OUTPUT LEVEL: 0 to 1 volt rms, adjustable by front panet amplitude control. A dynamic range of 5 to 1 peak to rms value is provided.
OUTPUT STEP ATTENUATOR: X1.0, X0.1, X.01, X.001, X.0001. Accuracy ± 0.1 db to 500 kHz; ± 0.25 db to 5 mHz.
SPECTRAL DENSITY: Approx. for 1 volt rms output.

Band	mv/√Hz	Band	mv/√Hz
2 kHz	17.5	200 kHz	1.75
5 kHz	11.0	500 kHz	1.10
20 kHz	5.5	2 mHz	0.55
50 kHz	3.5	5 mHz	0.30

AMPLITUDE PROBABILITY DISTRIBUTION: Symmetrical Gaussian all ranges.
OUTPUT METER: 0 to 1 volt rms. Accuracy ±2% of full scale to 2 mHz; ±5% to 5 mHz.
MAXIMUM LOAD: 500 ohms on direct output.
OUTPUT IMPEDANCE: 50 ohms direct output.
POWER REQUIREMENTS: 115/230 volts ±10/20 volts, 50 to 1,000 Hertz ac.

Model 602A with full rack width mounting option.

Models 602A and **610A** combined by dual unit adapter kit.

OPTIONS & ACCESSORIES FOR MODELS 602A, 603A, 610A, & SERIES 624A

Rechargeable battery option . . . . . add $135
Full rack width cabinet and rack mounting hardware option add $35
Adapter kit, dual unit and rack mounting hardware $7
Adapter kit, single unit rack mounting (includes blank panel to make dual unit) $56
Rechargeable battery kit $145

·51154 10 Hz to 50 kHz ±½db	$485
·52115 20 Hz to 100 kHz ±½db	$470
·51115 10 Hz to 100 kHz ±½db	$505
·52125 20 Hz to 200 kHz ±½db	$520
·51125 10 Hz to 200 kHz ±½db	$555
·52155 20 Hz to 500 kHz ±½db	$540
·51155 10 Hz to 500 kHz ±½db	$575

ENCAPSULATED NOISE SOURCE MODULES

Series 1602A, 1603A, and 1606A ..... **$95 to $340**
Various frequency ranges and output flatness available. Size: 1¾" x 1½" x ¾". Write for details.

SOLID STATE NOISE GENERATORS

MODEL 632A Dual Output DC to 400 Hz and 5 Hz to 40 kHz **$2,595**

LOW FREQUENCY OUTPUT

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian ±1.0%.
OUTPUT SPECTRUM: Uniform ±0.1 db from DC to 350 Hz.
MAXIMUM OUTPUT: 1.0 volts rms. A dynamic range of 5 to 1 peak to rms value is provided.
MAXIMUM SPECTRAL DENSITY: Approx. 1.5 x 10^{-3} volts²/Hz.
OUTPUT MEAN: Less than 5 mv.
OUTPUT IMPEDANCE: Approximately 1,000 ohms.

HIGH FREQUENCY OUTPUT

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian ±2%.
OUTPUT SPECTRUM: Uniform ±0.5 db from 10 to 35,000 Hz.
MAXIMUM OUTPUT: 1.0 volts rms. A dynamic range of 5 to 1 peak to rms values is provided.
MAXIMUM SPECTRAL DENSITY: Approx. 2 x 10^{-5} volts²/Hz.
OUTPUT MEAN: Less than 1 mv.
OUTPUT IMPEDANCE: Approximately 100 ohms.

NOISE REGULATOR: rms output level continuously stabilized against a reference voltage.
OVERLOAD INDICATOR: Panel overload indicator lights when input noise level to regulator is out of regulation range.
POWER: 115/230 volts ±10/20 volts, 50 to 1,000 Hertz ac.
DIMENSIONS: 5¾" high x 17" wide x 11" deep. 19" wide with rack mounting flanges mounted (supplied).

Model 631A 5 Hz to 40 kHz **$1,645**

VACUUM TUBE NOISE GENERATORS

Model 301A DC to 40 Hz **$2,195**

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian ±1%.
OUTPUT SPECTRUM: Uniform ±0.1 db from 0 to 35 Hz.
MAX. OUTPUT: 12 volts rms into a 1 megohm input resistance. Dynamic range of 5 to 1 peak-to-rms is provided.
MAX. SPECTRAL DENSITY: Approx. 2.5 volts²/Hz.
D.C. UNBALANCE: Less than 50 mv.
NOISE REGULATOR: rms output level continuously stabilitzed against a reference voltage.
OVERLOAD INDICATOR: Panel overload indicator lights when input noise level to regulator is out of regulation range.
POWER: 115/230 volts ±10/20 volts, 50 to 1,000 Hertz ac.
MOUNTING: Standard relay rack panel 7" high x 19" wide. Can be supplied in deluxe cabinet as shown for $75 extra.

Model 321A DC to 120 Hz **$2,295**

OUTPUT SPECTRUM: Uniform ±0.1 db from 0 to 105 Hz.
MAX. SPECTRAL DENSITY: Approx. 1.0 volts²/Hz.

OTHER SPECIFICATIONS SAME AS MODEL 301A

VACUUM TUBE NOISE GENERATORS

Model 331A 5 Hz to 20 kHz **$1,395**

OUTPUT SPECTRUM: Uniform to plus or minus 0.5 db from 10 to 20,000 Hz.
OUTPUT LEVEL: 0 to 5 volts rms, adjustable by self contained attenuator. A dynamic range of 7 to 1 peak to rms value is provided.
SPECTRAL DENSITY: Approx. 1 mv/$\sqrt{\text{Hz}}$ for 5 volt rms output.
AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian ±1%.
NOISE REGULATOR: rms output level continuously stabilized against a zener reference voltage.
OVERLOAD INDICATOR: Panel overload indicator lights when input noise level to regulator is out of regulation range.
OUTPUT METER: 0 to 5 volts rms.
MAX. LOAD: 10,000 ohms.
POWER REQUIREMENTS: 115/230 volts ±10/20 volts, 50 to 1,000 Hertz ac.
MOUNTING: Standard relay rack panel 7" high x 19" wide and is 15" deep. Can be supplied in deluxe cabinet as shown for $75 extra.

MODEL 331A-23	5 Hz to 2 kHz	$1495
MODEL 331A-53	5 Hz to 5 kHz	$1495
MODEL 331A-54	5 Hz to 50 kHz	$1495
MODEL 331A-25	5 Hz to 200 kHz	$1595
MODEL 331A-55	5 Hz to 500 kHz	$1745

Model 311A Dual output DC to 40 Hz and 5 Hz to 20 kHz **$2,595**

LOW FREQUENCY OUTPUT

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian ±1%.
OUTPUT SPECTRUM: Uniform ±0.1 db from 0 to 35 Hz.
MAX. OUTPUT: 12 volts rms into a 1 megohm input resistance. Dynamic range of 5 to 1 peak-to-rms is provided.
MAX. SPECTRAL DENSITY: Approx. 2.5 volts²/Hz.
D.C. UNBALANCE: Less than 50 mv.

HIGH FREQUENCY OUTPUT

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian ±2%.
OUTPUT SPECTRUM: Uniform ±0.5 db from 10 to 20,000 Hz.
MAX. OUTPUT: 15 volts rms.
MAX. SPECTRAL DENSITY: 7.5 x 10^{-3} volts²/Hz.

NOISE REGULATOR: rms output level continuously stabilized against a reference voltage.
OVERLOAD INDICATOR: Panel overload indicator lights when input noise level to regulator is out of regulation range.
POWER: 115 v. ±10 v, 50/60 Hertz ac.
MOUNTING: Standard relay rack panel 7" high x 19" wide. Deluxe cabinet as shown not available.

Model 312A Dual output DC to 120 Hz and 5 Hz to 20 kHz **$2,695**

LOW FREQUENCY OUTPUT

AMPLITUDE PROBABILITY DISTRIBUTION: Gaussian ±1%.
OUTPUT SPECTRUM: Uniform ±0.1 db from 0 to 105 Hz.
MAX. OUTPUT: 12 volts rms into a 1 megohm input resistance. Dynamic range of 5 to 1 peak-to-rms is provided.
MAX. SPECTRAL DENSITY: Approx. 1.0 volts²/Hz.
D.C. UNBALANCE: Less than 50 mv.

HIGH FREQUENCY OUTPUT

ELECTRO-MECHANICAL INSTRUMENT CO. INC., PERKASIE, PENNSYLVANIA 18944

a wholly-owned subsidiary of VICTOREEN LEECE-NEVILLE CO.

e|s|i® precision test and calibration instruments

ESI produces a comprehensive line of instruments, standards and system components for the precise measurement of resistance, voltage, capacitance, inductance and ac/dc ratio. The full spectrum of critical application is covered: standards and laboratory calibration, design work, production and field test.

All calibrations on ESI instruments are traceable to the National Bureau of Standards through ESI transportable reference standards. These standards are test reported by NBS and maintained by ESI. They form the base from which our professional grade instruments derive their warranted accuracy.

For more complete information than given here, please request our comprehensive metrology catalog.

ESI traceability—application chart (Numbers in boxes are models of ESI instruments)

300A PVB® Potentiometric Voltmeter Bridge

The Model 300A Potentiometric Voltmeter Bridge provides a complete five-dial dc measurement facility in one convenient battery-operated instrument with 0.01% accuracy, 2 μV sensitivity. (A Model 300 is offered at 0.02% accuracy at less cost.)

The PVB® combines the functions of a five-range potentiometric voltmeter, three-range precision voltage source, eight-range ammeter, ten-range guarded Kelvin double bridge, four-terminal 0.01% resistance comparison bridge, ratiometer and high-sensitivity electronic null detector. Two-, three- or four-terminal resistance measurements can be made.

A modulator-type null detector with an integral high-gain solid-state amplifier provides better than 2 microvolts dc sensitivity with an input impedance of approximately one megohm. Exceptional rejection of ac pickup by the detector, coupled with complete guarding and shielding, makes possible accurate measurements in noisy electrical environments under conditions of high humidity. Long battery life provides complete flexibility of measurement by isolating the instrument from annoying ground loops and power line transients. Measurements can be made in either grounded or ungrounded systems.

300A PVB accessories

1302A & 1303A platinum resistance thermometer and adapter. A precision thermometer specifically designed for use with the 300A PVB plus a new, four-terminal adapter. Readings are given directly as the ratio between zero-point resistance and the resistance at the temperature to be measured, thereby eliminating several steps in computation of the temperature.

1304 four-terminal sorting fixture. A flexible sorting fixture which can be used with almost any size component and can make a four-terminal connection with nearly any lead configuration.

1305 high-voltage adapter. This adapter allows the 300A PVB® to measure positive and negative voltages as high as 5000 volts. It consists of a precision calibrated voltage divider that attenuates the input voltage by a factor of exactly 1000.

1307 pH measuring adapter. This adapter enables the 300 PVB® to measure positive or negative pH readings by connecting pH electrodes to the 300A PVB®.

1310 precision voltage source. This source provides a 50-nanovolt to 5-volt calibration signal, with sufficient power to drive the instrument under test, allowing a complete field calibration system for recorders, meters and other low-input-impedance devices.

1399A ac-dc converter. This converter is used with the 300A PVB to permit measurement of ac voltages at dc potentials of ±600 volts to case or line ground.

Multi-Purpose Instruments (Cont.)

- 0.05% resistance accuracy
- 0.1% capacitance, inductance accuracy
- simplified in-line readout of D or Q, measured value
- self-contained ac/dc generator-detector
- front panel terminals

293 universal impedance measuring system

Precision measurements can be made of resistance, conductance, inductance and capacitance. Modern circuit design, close manufacturing tolerance, and the highest quality materials permit a conservative accuracy rating of 0.05% for R and C, 0.1% for inductance and capacitance. Comparative five-figure measurements can be made using the 120,005 divisions of dial resolution provided by the unique ESI DEKADIAL®. Provides dc, and ac at 1 kHz and front-panel provisions to plug in separate frequency modules. This precision system is designed for maximum versatility. Terminals are provided so that ranges may be extended and special circuit connections can be made.

250DE portable impedance bridge

A completely self-contained, portable instrument for precision measurements o resistance, capacitance and inductance. It can also be used to measure diss pation factor and storage factor for capacitors and inductors. Its accurac is conservatively rated at 0.1% for R, 0.2% for C and L. Even greater precisio is possible for comparative measurements because of the 12,005 divisions o dial resolution.

This instrument is extremely versatile for ac measurements involving d bias. Other applications include non-destructive life prediction testing, pro duction limits testing and temperature measurement using copper resistanc elements.

Resistance Measurements

500 Resistance Deviation Bridge

High volume resistor sorter and tester with 0.01% accuracy or better; ranges from 1 ohm to over 100 megohms. When operated semi-automatically with the KELVIN-KLAMP® and foot switch provided, measurements can be made at the rate of one per second with 50 ppm accuracy.

231C Guarded Wheatstone System

Direct-reading accuracy of 0.01%. Range 10 milliohms to 12 gigohms with high resolution. Completely guarded internally; Model 801 Generator-Detector provides variable generator output 0 to 600 V, detector ranges of 1000 volts to 3 microvolts. Lower range, less expensive 232A System also available.

242C Resistance Measuring System

Most versatile system at 10 ppm direct readout accuracy. Four-terminal comparisons to 1 ppm, with 0.1 ppm resolution. Matched generator — detector with complete guarding and shielding provides easy operation over wide range (10 microhms—120 megohms). Data logging available, as is less accurate, less expensive Model 242B.

123 Resistance Comparison System

For absolute ratio comparison of resistance standards to 0.2 ppm direct reading. Wide range to 10 megohms. Wenner balance ensures traceability, stability. Includes Model 900 Nanovolt Galvanometer.

262 Resistance Comparator

A low cost, compact trimming bridg which is ideal for fast resistor-winding cu off determination. High ac rejection filte out production environment noise; accu racy of 0.01%; range of 1 milliohm to 10 megohm; six deviation ranges from 30% to 0.1% and guarded 4-terminal connec tions.

MODEL	DESCRIPTION	FULL SCALE RANGES	NOMINAL ACCURACY	PRICE
500	Auto Kelvin bridge and sorting fixture	1111 Ω to 11 MΩ (1 mΩ steps)	0.01%	$2900.
262	Resistance comparator	1 mΩ to 100 MΩ	0.01%	490.
242B	Kelvin bridge, gen.-det. and decade standard	0.1 mΩ-120 MΩ (1 μΩ resolution)	50 ppm	4000.
242C	(same)	(same)	10 ppm	5600.
240	Kelvin comparison bridge, 5 ratio ranges	1 ppm resolution	10-30 ppm	1100.
240C	(same, except trimmable)	0.1 ppm resolution	2 ppm	1650.
231C	Wheatstone bridge, guarded gen.-det.	1.2 Ω 12 GΩ	0.01%	2375.
232A	Wheatstone bridge, gen.-det.	1.2 Ω 12 GΩ	0.01%	1575.
123	Double ratio set, nanovolt detector	1:1, 10:1 ratios	0.2 ppm	7975.
122	Direct-reading double ratio set	1:1, 10:1 ratios	0.2 ppm	4900.

e|s|i precision instruments ®

Capacitance Measurement

701 Capacitance Measuring System

Two and three-terminal capacitors measured from 0 to 1.2 microfarads with 0.01% accuracy. Resolution of 1 ppm and continuous tuning from 20 cycles to 20 kHz.

273 Capacitance Bridge

Provides capacitance measurements over 9 ranges, from zero to 120 pF through zero to 12,000 μF, with accuracy to ±0.1% over the most widely used ranges. It uses a highly accurate and sensitive bridge-detector circuit, with four-terminal Kelvin connections to eliminate errors caused by lead resistance. Completely shielded throughout plus easy-to-read nullmeter and easy-to-operate controls.

272 Capacitance Bridge

Offers lower D and C ranges (0 to 0.0105 at 1 kHz and 0 to 120 pF) plus greater D resolution (0.0001 at 1 kHz) than its sister, the Model 273. In addition, it has better D accuracy (0.0005) while maintaining the same C accuracy of 0.1%. Highest of the instrument's seven C ranges is 0 to 120 microfarads. All types of capacitors, including electrolytic or tantulum varieties, may be checked.

Voltage Measurement

1046 DC Voltage Measurement System

Nanovolt to kilovolt with one system; 5 ppm accuracy above one volt, 0.5% at 1 microvolt; nanovolt sensitivity and resolution; standard cell comparison to 0.005 ppm. Includes both Models 1045A1 and 945.

MODEL	DESCRIPTION	FULL SCALE RANGES	NOMINAL ACCURACY	PRICE
1046	Precision DC voltage system, 7 dial	1 nV-1111 V (1 nV steps)	5 ppm	$8500.
1045A1	Potentiometric DC voltmeter, two internal detectors	11 V-1111 V (1 μV steps)	5 ppm	4850.
945	Nanovolt potentiometer with galvanometer	1 nV-1 V (1 nV resolution)	ext. ref. source	3650.
1040A	Guarded absolute voltbox	1:1, 1:10, 1:100 ratios	1-4 ppm	1150.
701	Capacitance measuring system, gen.-det.	12 pF-1200 nF (0.0001 pF resolution)	0.01%	2500.
273	Capacitance bridge, 4-terminal, gen-det.	120 pF-12,000 μF (0.01 pF resolution)	0.1%	950.
272	Capacitance bridge, improved dissipation resolution	120 pF-120 μF (0.01 pF resolution; 0.0001 dissipation resolution)	0.1%	950.

Ratio Measurement

791/1071AC Ratio Calibration System

Calibrate AC ratio transformers and resistive decade voltage dividers; compare standard capacitors and inductors; provide 0.5 ppm linearity, traceable to NBS. 791 also determines residual reactances.

731A DC Ratio and Voltage Calibration System

7-decade lab standard voltage divider, plus guarded absolute ratio voltbox with built-in, self-calibration.

Temp. R_t/R_o Measurement

951 Temperature Measuring System

10 ppm measurement of thermometer/ice point resistance ratio. Features direct readout of R_t/R_o or resistance; 2 nanovolt sensitivity. Combines Mueller bridge and potentiometric methods of temperature measurement.

MODEL	DESCRIPTION	RANGE	NOMINAL ACCURACY	PRICE
†*731A	DC ratio and voltage calibration (less power supply)	7-dial K-V divider (0.1 ppm/step)	1-10 ppm	$2795.
791	AC ratio measuring system, gen.-det.	7-dial transformer (0.1 ppm/step)	0.5-5 ppm	2850.
†*1071	AC ratio measuring system, gen.-det.	7-dial transformer (0.1 ppm/step)	0.5-5 ppm	2015.
951	Temp. meas., R_t/R_o	0-1111 Ω	10 ppm	6150.
*Special order	†Certified report of calibration supplied			

Generators-Detectors

801 DC Generator-Detector

Features solid state construction with complete guarding and shielding; 3-microvolt full-scale sensitivity; power-limited output to 1 watt; 600 volts maximum.

861A AC Generator-Detector

Gang-tuned 20 hertz to 20 kilohertz, variable; 1-microvolt sensitivity, very low noise; variable generator output power-limited.

900R Nanovolt Galvanometer

Precision nullmeter for low-level signal measurement. Wide range: 10 nanovolts to 3 millivolts. No critical adjustments: Operates from any source resistance. Two nanovolt sensitivity with 2% accuracy end scale, all ranges.

MODEL	DESCRIPTION	GEN. OUTPUT	DETECTOR SENS.	INPUT R.	PRICE
801	DC generator-detector 3 μV-1000 V end scale	0-600 V	0.1 μV	100 k-100 MΩ	$1300.
803A	DC generator-detector	0-200 V	5 μV	500 kΩ	500.
830	DC generator, guarded and isolated	0-200 V	——	——	575.
861A	AC generator-detector, variable freq.	0-200 V, 20 Hz-20 kHz	0.25 μV	1 MΩ	850.
865	AC/DC generator-detector	0-6 V	5 μV	10 MΩ	575.
900R	Nanovolt galvanometer, 10 nV-3 mV end scale	——	2 nV	1000 Ω	2350.

esi® standards, calibration and system components

Standards

SR 104 Transportable Resistance Standard

Calibration to 1 ppm is available on this 10-kilohm standard. Unique features include stability of 1 ppm/yr and a temperature coefficient of less than 0.2 ppm/°C.

SR 1010 Resistance Transfer Standard

Twelve aged premium resistors, shielded, provide transfer measurements from a standard resistor to one of different value; accurate to 1 ppm.

SC 1000 Standard Capacitor

3-terminal, one nanofarad capacitor for calibrating bridges, capacitors. Stability of 20 ppm/yr guaranteed.

SV 150 Standard Voltage Cell

First voltage standard easily tra ported. Four cells sealed in co trolled environment with integ batteries for maintaining pow during shipment. Sealed batteri rarely need servicing and cann spill.

MODEL	DESCRIPTION	VALUE	NOMINAL ACCURACY	PRICE
†SR 104	10k transportable resistance standard	10 kΩ	5 ppm (1 ppm/yr stability)	$ 600.
SR 1	Standard resistor	.01 Ω	500 ppm	55.

Working Standards

Many of the decade and divider standards offered in the ESI catalog can be special ordered in a programable version. Most accuracies and ranges can be obtained with either binary or BCD coding. Contact repeatability and reliability are outstanding, due to the use of latching mercury-wetted relays throughout.

RV 726 DEKAVIDER® Decade Voltage Divider

Self-calibration, 7-decade Kelvin-Varley circuit provides 0.1 linearity, 0.1 ppm resolution and outstanding performance at low settings. Temp. coefficient of ± 1 ppm/°C. RV 722 is a 7-decade, 1 ppm non-trimmable unit.

DT 72A DEKATRAN® Decade Transformer Standard

Laboratory voltage divider having 0.1-ppm resolution with 7-dial in-line readout. Over-windings provide additional 0.1 taps. Calibration certificate supplied.

DC 57 DEKAPACITOR® Capacitance Decade

Low-loss, 1% accuracy standard. Four decades and interpolating, variable air capacitor for continuous resolution. Range to 1.111120 microfarads.

RS 925C Resistance Standard

Four-terminal, provides 10 significant figures and accuracy of 0.0005%. Value: 1.2 megohm in 10 milliohm steps. First four decades trimmable. RS 624 is 6-decade, less accurate version.

DB 52 DEKABOX® In-line Decade

Resistors used for precision dc and audi frequency. Low temperature, power coeff cients; minimal leakage. Six-dial DB 6 also available.

DB 877 DEKABOX® Decade Resist

Compact design employs two coaxial dials (ES patent) for 8 full decades to 12 megohms at 0.02% accuracy long term.

MODEL	DESCRIPTION	VALUE	LINEARITY	PRICE

We offer the widest selection of standard model shunts available anywhere. Both switchboard and portable types. In addition, we produce custom made shunts to your specifications. Our standard models, illustrated on this page have current ratings up to 30,000 amperes. Many of these can be shipped immediately. Custom made shunts, of course, take a little time to produce. But whether you order a standard or special model, we promise fast service, fine craftsmanship and a personal interest in your complete satisfaction.

WAVEFORM GENERATORS

Function Generators Oscillators (Variable Frequency) Pulse Generators Signal Generators Complex Waveform Synthesizers

MINIATURE WAVEFORM GENERATORS

A Combination Waveform, Oscillator and Pulse Generator

100 series waveform generators are:

MODEL 100 WAVEFORM GENERATOR
.001Hz to 5MHz; Sine ∿, Square-⊓, Pulse ⊓⊓ ⊓⊓, Triangle ∿ and Ramp ⊿⊾. Variable 0 to 15V P-P into 50 onms, 30V P-P Open Circuit, with variable ±5V D.C. offset. $445

MODEL 120 WAVEFORM GENERATOR
Sine, Square & Triangle 0.1Hz to 3 MHz $295

MODEL 123 VCF GENERATOR
Voltage controlled frequency 1000:1 range $345

MODEL 126 VCF/SWEEP GENERATOR
Internal ramp provides 1000:1 sweep capability $495

MODULAR WAVEFORM GENERATOR

The 5000 modular system offers the capabilities of building a wide variety of waveform, oscillator, pulse or signal generators from basic independent modular units. 3½" Thin

Some modules for this system are:

GENERATORS

G5210 ⊓⊔ ∿	0.0001Hz to 2MHz (triangle for sine shaping limited to 1MHz)	$225
G5212 (ramp)	1000 sec to 1μsec built-in gating, triggering.	$210
G5214 (ramp)	100 sec to 10 μ sec designed to drive G5211 or M5310	$210

MODULATOR

M5310	Adds VCF to G5210	$95

MODE CONTROLS

C5110	Gate and Trig to generator—variable start-stop point. Adds haversine and havertriangle	$75

AMPLIFIERS

A5410	Square output only. Features fast rise and fall times. 28V P-P into 600 ohms.	$75
A5420	Built-in sine shaper. External input provided. 26V P-P into 600 ohms.	$125
P5001	Cabinet/power unit ±18V regulated, ±30 unregulated, ±8V unregulated	$290

The P5001 cabinet/power supply can hold and supply power to seven module widths, the generators being two module widths each and all other modules one width each.

WAVEFORM GENERATOR (SLIM LINE 3.5")

Designed to give a great amount of flexibility in a fixed package at a low cost

500 series waveform generators are:

MODEL 502 WAVEFORM GENERATOR .001 Hz to 1MHz; Sine ∿, Square ⊓⊔⊓⊔, Pulse-⊓⊔⊓⊔, Triangle ∿ and Ramp ⊿⊾ Sine, Triangle and Ramp 10V P-P into 600 ohms. Square 14V P-P. $385

MODEL 500B WAVEFORM GENERATOR .0001Hz to 1MHz, square and triangle to 2MHz; Sine∿, Square -⊓⊔⊓⊔, Pulse-⊓⊔⊓⊔, Triangle ∿ and Ramp ⊿⊾. Three independent output amplifiers and attenuators, 25V P-P into 600 ohms with variable D.C. offset. Will drive 50 ohms at reduced amplitude. $495

MODEL 503B VCF GENERATOR All Model 500B features plus precision control of frequency with an external voltage (VCF). 50:1 sweeping ratio. VCF input signal conditioning. $545

MODEL 504B TRIGGERED GENERATOR All Model 500B features plus manual or external gating and triggering (single shot). Variable start-stop point adds haversine waveform. $565

MODEL 505B TRIGGERED, VCF All Model 500B features plus gating, triggering and voltage controlled frequency (reference Models 503B and 504B). $645

NEW 201 COMPLEX WAVEFORM SYNTHESIZER SOLID STATE 5½" HIGH PACKAGE

DIGITAL

ANALOG

Produces forty individual and incremental voltage levels, twenty, if both amplitude level and the pulse width are variable. Both digital and analog (variable slope) outputs. Increment programming enables each individual increment to be set to a pre-determined D.C. level by monitoring with VOM or DVM. Increments variable from 100 msec to 2 μsec.

Prices and specifications subject to change.

MEGOHMMETERS

Freed can supply a complete range of insulation resistance measuring equipment with fixed and variable d.c. test voltages from 5 to 5000 volts. Insulation and leakage measurements can be made on transformers, motors, cables, electronic assemblies and components, dielectric materials, electrical appliances and tools, capacitors and resistors.

Type	Resistance Range	Test Voltage	Accuracy	Power Requirements	Size and Weight	Pr
1620	0.1 to 4,000,000 megohms 1 to 2,000,000 megohms @ 500 volts	Variable 50 to 1000 volts d.c.	±5% at full scale	105-125 volts 50-60 cycles	15" x 9" x 7½" 24 lbs. *	360
1620-A	0.01 to 4,000,000 megohms 0.1 to 200,000 megohms @ 50 volts 1 to 2,000,000 megohms @ 500 volts	Variable 5-100 volts d.c. 100-1000 volts d.c.	±5% at full scale	105-125 volts 50-60 cycles	15" x 9" x 7½" 24 lbs. *	375
1620-B	1 to 2,000,000 megohms 10 to 2,000,000 megohms @ 2500 volts	Variable 250-2500 volts d.c.	±5% at full scale	105-125 volts 50-60 cycles	15" x 9" x 7½" 24 lbs. *	395
1620-C	All features same as Type 1620 with additional circuitry for capacitor measurements	Variable 50 to 1000 volts d.c.	±5% at full scale	105-125 volts 50-60 cycles	15" x 9" x 7½" 24 lbs. *	385
1620-D	0.01 to 40,000,000 megohms 0.1 to 2,000,000 megohms @ 50 volts 1 to 20,000,000 megohms @ 500 volts	Variable 5-100 volts d.c. 100-1000 volts d.c.	±5% at full scale except highest range ±10%	105-125 volts 50-60 cycles	15" x 9" x 7½" 25 lbs. *	415
1020-C	0.1 to 2,000,000 megohms 0.1 to 200,000 megohms @ 50 or 100 volts d.c. 1 to 2,000,000 megohms @ 500 volts d.c.	Fixed 50, 100, 500 volts Regulated	±3% all ranges except highest range ±5%	105-125 volts 50-60 cycles	9½" x 10½" x 8" 18 lbs. *	280
1020-D	0.1 to 2,000,000 megohms 0.1 to 200,000 megohms @ 100 or 200 volts d.c. 1 to 2,000,000 megohms @ 500 volts d.c.	Fixed 100, 200, 500 volts Regulated	±3% all ranges except highest range ±5%	105-125 volts 50-60 cycles	9½" x 10½" x 8" 18 lbs. *	290
* 266	0.6 megohm to 500 teraohm @ 500 v. 0.6 megohm to 100 teraohm @ 100 v.	Fixed 100-500 v.d.c. Regulated	± 5% at full scale	105-125 Volts 50-60 Hz	11½" x 9" x 9" 18 lbs.	425
* 668	0 to 20,000 megohms @ 1000 v 0 to 50,000 megohms @ 2500 v 0 to 100,000 megohms @ 5000 v	Fixed 1000-2500 5000 v.d.c.	±2.5% of scale length	battery operated transistor supply built in charger	16" x 12½" x 6½" 23 lbs.	850.
2030-A	10 to 2,000,000 megohms	Fixed 500 volts d.c.	±5% full scale	battery operated transistor supply	6" x 8" x 4" 8 lbs.	205
2030-B	1 to 20,000,000 megohms	Fixed 500 volts d.c.	±5% full scale	battery operated transistor supply	6" x 8" x 4" 8 lbs.	250
2030-C	1 to 2,000,000 megohms	Fixed 50 volts d.c.	±5% full scale	battery operated transistor supply	6" x 8" x 4" 8 lbs.	225
2030-D	1 to 2,000,000 megohms	Fixed 100 volts d.c.	±5% full scale	battery operated transistor supply	6" x 8" x 4" 8 lbs.	225
2030-E	1 to 2,000,000 megohms	Fixed 200 volts d.c.	±5% full scale	battery operated transistor supply	6" x 8" x 4" 8 lbs.	225
* 667	0 to 10,000 megohm	Fixed 100-250-500 1000 v.d.c.	± 2.5% of scale length	battery operated transistor supply	8½" x 4½" x 5" 4½ lbs.	175

Rack type available — 1620 series 19" x 10½" x 9½"
1020 series 19" x 7" x 9½"

* Norma Instruments, Freed exclusive U.S. agent.

MEGOHMMETER - NO. 1650 NEW

The Type 1650 Megohmmeter is a versatile ultra high resistance measuring instrument providing variable test voltages from 10 to 1000 v.d.c. Ground and guard terminals are provided for measurement of grounded and ungrounded two or three terminal components. Provision for pre-charging and discharging capacitors is incorporated in the instrument.

Specifications: Test Voltage: 10-1000 v.d.c. – Resistance Range: 50 KΩ to 200 TΩ – Operating Voltage: 105-125 volts, 50-60 Hz – Size and Weight: 11" x 10" x 8"; approx. 12 lbs. – Price: $465.00.

MEGOHMMETER - NO. 2030-G NEW

The new Type 2030-G Megohmmeter is a portable re-chargeable battery operated high insulation resistance measuring instrument. Battery operation provides stable isolated resistance measurement capability not affected by leakage path through the power lines. Five commonly used test voltages are available from 50 to 500 volts.

Specifications: Test Voltages: 50, 100, 200, 250, 500 v.d.c., ±5% – Resistance Range: 50 KΩ to 100 teraohms in eight ranges: 50 v., 50KΩ to 10 TΩ, 100 v., 100 KΩ to 20 TΩ, 200 v., 200 KΩ to 40 TΩ, 250 v., 250 KΩ to 50 TΩ, 500 v., 500 KΩ to 100 TΩ – Resistance Accuracy: ±5% at full scale to 1 teraohm, ±10% above – Operating Voltage: Re-chargeable batteries – Size and Weight: 11" x 10" x 8", approx. 10 lbs. – Price: $345.00.

NON-DESTRUCTIVE MEGOHMMETER NEW

The Type 1625 Non-Destructive Megohmmeter provides three modes of insulation resistance testing: a manual voltage control meghommeter; an automatic linear ramp voltage; and an adjustable leakage current for non-destructive dielectric testing of components. The non-destructive feature will operate in the automatic ramp mode or by manual voltage control. Test voltage is removed from the unknown in milli-seconds when leakage current exceeds the preset value. A voltmeter indicates the test voltage at disconnect and will hold the reading until reset.

Specifications: Test Voltage: Manual or Ramp controlled, 50-1000 v.d.c. – Resistance Range: 0.1 to 4,000,000 megohms, 1 to 2,000,000 megohms at 500v. – Resistance Accuracy: ±5% at full scale – Leakage Current: 15 microamps to 3 milliamps – Operating Voltage: 105-125 volts, 50-60 Hz – Size and Weight: 15" x 9" x 7½", 26 lbs. – Price: $495.00.

INCREMENTAL INDUCTANCE BRIDGES

Direct in-line readings of inductance and conductance of iron core component at audio frequencies with or without superimposed direct current. The bridge uses the Owens circuit with provisions for measuring the series or parallel inductance and conductance of the unknown inductor; five precision resistance and capacitance decades are provided to indicate these values. "Q" or storage factor can be measured as the product of the inductive reactance and the conductance.

Type	Inductance Range	Conductance Range	Frequency Range	D.C. Current	Accuracy	Dimensions and Weight	Price
1110-C	1111.1 h to 1 mh 5 decades 1.1 h to 1 μh 2 decades	0.015 μmho—100 mho "Q" = 600 max @ 100 cycles	20 cycles to 10KC	up to 2 amperes	±0.5% to 5 KC ±2% to 10 KC	21¾" x 17½" x 15¼" 50 lbs.	545.00
1115	111.1 h to 100 μh 5 decades 0.11 h to 0.1 μh 2 decades	0.15 μmho—1000 mho "Q" = 600 max @ 100 cycles	20 cycles to 10 KC	up to 15 amperes	±1% to 5 KC ±3% to 10 KC	21¾" x 28" x 15¼" 80 lbs.	825.00
1185	111.1 h to 100 μh 5 decades 0.11 h to 0.1 μh 2 decades	0.15 μmho—1000 mho "Q" = 600 max @ 100 cycles	20 cycles to 10 KC	up to 30 amperes	±1% to 5 KC ±3% to 10 KC	21¾" x 33¼" x 15¼" 100 lbs.	1250.00

IMPEDANCE & ADMITTANCE BRIDGE

An audio frequency bridge for measuring the complex impedances of inductors, transformers, filter networks and capacitors.

Type	Frequency Range	Impedance and Admittance	Accuracy	Maximum Applied Voltage	Dimensions and Weight	Price
1120	20 to 20,000 cycles	XL, XC and R up to 1000 ohms, BL, BC and G up to 1000 microhms	R: ±1% G: ±2% X: ±1% up to 5 KC B: ±1% up to 5 KC	125 Volts	10½" x 12" x 12" 25 lbs.	455.00

UNIVERSAL BRIDGE

The Freed Type 1150-A Universal Bridge offers the laboratory a combination of eight bridges in one instrument. This bridge will measure the reactive and resistive component of impedances, capacitance, resistance and phase angle. In the Hay and/or Owen bridge configuration the incremental permeability of an inductance can be measured.

Type	Inductance Range	Capacitance Range	Resistance Range	"D" Hay Bridge	Price
1150-A	5 μh 1110 h	5 pf-10 mf	0.05 Ω-1 MΩ	0.001-10 Q = 0.1-1000	825.00
	"Q" Maxwell 0.01-50	"Q" Series Owen 0.01-600 @ 100 cycles	"Q" Parallel Owen 80 @ 100 cycles	"Q" Parallel Resistor-Condensor Bridge 0.01-11.1	
	Accuracy Inductance ±0.5% up to 1 KC. ±2% to 10 KC. Capacitance ±1% @ 1 KC. "D"-"Q" ±5% @ 1 KC. Resistance (ac.) ±1% @ 1 KC.			Dimensions and Weight 21¾" x 24½" x 17" 65 lbs.	

INDUCTANCE COMPARISON BRIDGE

A complete production unit for comparing transformer and inductor impedances under dynamic conditions against a standard resistor. The instrument has a self-contained metered 500 Ma. d.c. supply, metered 135 volt a.c. source and a direct reading percentage deviation indicator, provision for connecting external test frequencies up to 10 Kc. is provided.

Type	Inductance Range	Deviation Range	Test Frequency	D.C. Current Range	Dimensions and Weight	Price
1870	25 mh - 100 h	±20%, accuracy 1% ±30%, accuracy 5%	60-10,000 cycles	0.5 ma., 0-25 ma., 0-100 ma., 0-500 ma.	22" x 19½" x 15" 150 lbs.	550.00

COMPARISON & LIMIT BRIDGE

A rapid and convenient method for laboratory or production testing of resistors, capacitors and inductors. Components may be sorted for tolerances up to ±20% or selected in matched pairs.

Type	Inductance Range	Capacitance Range	Resistance Range	Test Frequency	Accuracy	Dimensions and Weight	Price
1010-A	10 μh-100 h	10 Pf-100 mf.	1 Ω-20 MΩ	50 or 60 cycles 1 KC-10 KC	±0.1% on 5% range	10½" x 12" x 12" 17 lbs.	350.00

NULL DETECTORS

Sensitive null detectors for bridge measurements, with self contained selective filters to limit the amplifier characteristics at various bridge measuring frequencies.

Type	Sensitivity	Frequency Range	Filter	Power Requirements	Dimensions and Weight	Price
1140-B	10μ volts @ 1 KC for 15% meter deflection filter in	20 to 20,000 cycles	Fixed 60, 400, 1000 cycles Adjustable ±5% of center Other frequencies available	105-125 volts 50-60 cycles	Cabinet 12" x 8½" x 10"—18 lbs. Rack—19" x 6" x 10"	250.00
2076	1μ volts @ 1 KC for 15% meter deflection filter in	20 to 20,000 cycles	Fixed 60, 400, 1000 cycles Adjustable ±5% of center Other frequencies available	Transistorized Battery operated	Cabinet—8" x 6" x 8" Rack—19" x 5¼" x 8"	295.00

NULL DETECTOR — VACUUM TUBE VOLTMETER

Designed primarily for a.c. bridge measurements, a dual purpose instrument for indicating bridge balance and the a.c. excitation across the unknown.

Type	Null Sensitivity	Frequency Range	Filter	Power Requirements	Dimensions and Weight	Price
1210-B	10 M volts @ 1 KC for 15% meter deflection	20-20,000 cycles	Fixed 60, 400, 1000 cycles provision for other frequencies	105-125 volts 50-60 cycles	*21" x 12" x 13" 37 lbs.	350.00
	Voltage Range	Input Impedance	Frequency Range	Accuracy	Rack	
	0.1 to 150 volts ac. 0.15-1.5-15-150 volts full scale	500 KΩ in parallel with 25 PF.	20 to 20,000 cycles ±1db	2% of full scale	19" x 8¾" x 9½"	

D.C. SUPPLY

A constant voltage transformer regulated current source designed for use with the Freed Incremental Inductance Bridges. Solid state bridge rectification, L-C filters and low internal impedance provides good current regulation with a minimum of circuit complexity.

Type	Current Ranges	Voltage Ranges	Regulation	Power Requirement	Dimensions and Weight	Price
1170-A	4 ranges, 0-5, 25, 100 and 1000 milliamperes	Maximum no load voltage 1000 Ma, 270V, 100 Ma, 270V, 25 Ma, 85 V, 5 Ma, 48 V	±1% for line variation 105-125 V	105-125 volts 60 cycles	19" x 10½" x 13½" 66 lbs.	350.00

LOW FREQUENCY "Q" INDICATORS

Direct indication of "Q" at low frequencies, inductance, distributed capacity, impedance and dielectric loss can also be measured. Instrument may be used to study the magnetic properties of iron core material for stability as a function of applied voltage and losses as a function of the frequency.

Type	Test Frequency	Q Range	Accuracy	Test Voltage	Power Requirements	Dimensions and Weight	Price
1030-A	20 cycles to 200 K.C.	1-1000	±5% 20 cycles to 50 KC— to 200 KC at reduced accuracy	Voltage to series circuit, 0.01 to 10 volts voltage across coil variable to 100 volts	105-125 volts 50-60 cycles	21" x 23" x 15" 120 lbs.	1250.00

NEW

NON-DESTRUCTIVE AC/DC INSULATION TESTERS

The Freed Type 3001 Non-destructive Insulation Tester features adjustable leakage current which may be preset for non-destructive dielectric testing of materials and components. Voltage is removed from the test sample when preset current is exceeded. A memory voltmeter will indicate voltage when preset current is removed from test sample and hold reading until reset. Manually variable test voltage and adjustable ramp of 2-4-6-8 seconds.

Specifications: Test Voltage: Model 3001 — 0-5000 v. A.C. RMS/D.C.; Preset Leakage Current: 20 microamps to 5 milliamps; Operating Voltage: 105-125 volts, 50-60 Hz; Size and Weight: 21" x 15" x 10", 58 lbs.; Price: Type 3001 — $395.00.

DISTORTION METER

The type 1970 Distortion Meter is a wide range low input impedance instrument, designed with passive circuitry resulting in high stability, low residual distortion and hum levels.

Type	Frequency Range	Input Impedance	Input Voltage	Sensitivity	Dimensions and Weight	Price
1970	20 cycles to 1 megacycle	75-150 300-600	1 to 200 volts	Distortion level of 0.02% for 1 volt input	19" x 10½" x 12" 30 lbs.	525.00

A.C. LINE REGULATOR

A distortion free 60/400 Hz electromechanical a.c. line regulator. Features a tubeless fast response phase reversible magnetic amplifier preceded by a transistor comparison amplifier with zener reference.

Type	Nominal Input Voltage-Frequency	Output Voltage	KVA Rating and Regulation Range	Regulation Accuracy	Response Speed Volts/sec.	Dimensions and Weight	Price
R.A.C. 1.5/3	115 Volts 60 or 400 Hz	Adjustable 110-120 volts	3 KVA for ± 10% regulation 1.5 KVA for ± 20% regulation	± 0.25% for ± 10% regulation range ± 0.5% for ± 20%	10@ ± 10% 20@ ± 20%	19" x 7" x 13" 45 lbs.	450.00

DECADE CAPACITORS

The Freed series of Decade Capacitors cover a wide range of values and can be supplied as individual decades from 0.0001 PF. per step to 1 mf. per step or in various combinations of assembled decade boxes. All capacitors are non-inductively wound and heat treated for stability.

Type	Total Capacity	Dielectric	Dissipation Factor	Accuracy	Dimensions and Weight		Price

*Maximum Q depending on inductance value and a.c. voltage across coil.

PHASE SEQUENCE INDICATOR

The model 206 phase sequence indicator is a rugged instant reading instrument for determining the proper connections of motors, meters and relays operating in a 3 phase system. The unit is supplied with permanently connected coded leads and operates over a voltage range of 80 to 400/500 volts, 16 to 400 Hz. Weight: 8 oz.; Dimensions: 2½" dia. x 1" thick. Comes complete with leather carrying case. Price: $36.50

ELAPSED TIME METER

Model 1900 is a rugged synchronous drive elapsed time indicator which indicates hours to 9999.9. Operates on 117 volts, 60 Hz; power consumption 1 watt. Mounts in a 1" x 2" opening Price: $14.50.

SHORTED TURNS INDICATOR

*type 134 shorted turns indicator is a high sensitivity instrument which will detect the presence of one or more shorted turns in a coil using up to #44 wire. Eddy current losses are minimized by the use of a very low frequency built in test oscillator. The instrument will test most types of audio, power, IF chokes, relays and other coreless coils. Power requirement: 115 Volt, 60 Hz; Wt.: 13.5 lbs.; Dimension: 11" x 9" x 10"; Price: $395.00.

TRANSFORMER RATIO METER

The *type 227 will measure transformer ratio of 1 to 1011 in three decade ranges with an accuracy of 0.1%. The instrument can also be operated as a ratio comparison tester with a deviation range of ±1%. Power requirements: 115 volts, 60 Hz; Size 17" x 13" x 6"; Wt.: 25 lbs.; Price: $925.00.

*Norma Instruments, Freed Exclusive U.S. Agent.

FREQUENCY-TIME STANDARD

and now... Precision Frequency Standards *by* Atomichron® MODEL 3501

CESIUM BEAM PRIMARY TIME AND FREQUENCY STANDARD

Atomic and UTC Time Scales

Model 3501 Atomichron is a compact, solid-state, self-contained, cesium-beam primary time and frequency standard, designed for scientific, industrial and military applications. The 3501 provides output frequencies accurate to ± 1 parts in 10^{11} for the life of the cesium beam resonator, with a 1,000-second stability of ± 3 parts in 10^{12}, rms. The fundamental primary-loop frequency is 14.59+ MHz. Standard output frequencies (10 MHz, 100 kHz, 1 PPS and 14.591479 MHz) and standard time-scale selection (Atomic Time A.1 or Universal Time UTC) are provided by an internal frequency synthesizer (secondary loop) with a 10 MHz reference oscillator. No accessories are required to convert the unit from one time scale to another.

800 Hz SOLID STATE AURAL WARNING DEVICE

FUNCTION: This tone oscillator is designed for installation in aircraft of the turbo-jet class and up. Triggers audible warning alert signal when preset flying conditions are attained.

Unit works in conjunction with existing altimeter system to seek and hold pre-determined altitude.

VERSATILITY: By controlling 28 VDC input, functions other than altitude may be monitored audibly in flight.

SPEAKERS: The plane's built-in speaker system is employed, but, if required, self-contained speaker system supplied at extra cost.

INPUT: 28 VDC.

OUTPUT: 4 or 8 ohms at 10 W. maximum.

SIZE: 2¼ inch cube

WEIGHT: 8 oz.

ENVIRONMENTALS: Operates from −65°F. to +185°F. at altitudes up to 65,000 ft.

PERFORMANCE: Meets FAA requirements of FAR 91.51.

VOLTAGE REGULATOR — MODEL MRS

Designed for installation in computers, control, automation GSE, and other digital logic systems.

The Model MRS Series Voltage Regulator: 1) dissipates only 20% of the power consumed by conventional regulators; 2) distributes power to digital systems in the form of higher voltage and lower current; 3) delivers high current only at the point of installation; 4) reduces system noise by reducing buss bar currents.

SPECIFICATIONS

1. Input voltage range: 16-24 VDC
2. Output voltage:
   Model MRS 45 — 4.5 VDC
   Model MRS 50 — 5.0 VDC
   Model MRS 55 — 5.5 VDC
3. Load current: 0-500 ma
4. Efficiency: 65% @ Full Load
5. Line regulation: ±0.5% Max.
6. Load regulation:
   No load to full load: ±0.5% Max.
7. Output ripple: 40 m v P-P Max.
8. Temperature stability: 2.0 m v/°C
9. Operating temperature: 0-65°c
10. Overload and short circuit protection: Protected against dead short and above 150% overload
11. Recovery time:
    (a) No load to full load: 0.75m sec
    (b) Full load to no load: 4.5 m sec
12. Size: 1 3/16 x 1¼ x ½ inches high
    Leads: ⅝ inches long

Wide variety of other models of Voltage Regulators available. Contact us for further information.

HIGH POTENTIAL INSULATION TESTER MODEL HPT-100

MEASURES OR TESTS

☐ DC Insulation ☐ AC Insulation ☐ DC Leakage Current ☐ AC Leakage Current ☐ Megohm ☐ Corona **ON INDUSTRIAL AND MILITARY** ☐ Transformers ☐ Capacitors ☐ Cables ☐ Motors ☐ Insulation Materials ☐ Appliances ☐ High Voltage Rectifiers **FOR** ☐ Quality Control ☐ Production Testings ☐ Research and Development ☐ Maintenance ☐ Repair

Oil Filled H.V. Transformer, HVT1, used in the High Potential Insulation Tester GAR Model HPT-100.

SPECIFICATIONS

INPUT VOLTAGE 115 vac, 60 hz

POWER CONSUMPTION 70 watts

OUTPUT VOLTAGE DC: 0-10 kv continuously variable AC: 0-5 kv continuously variable

LEAKAGE CURRENT DC: 5 ranges zero to 5ua/10ua/50ua/100ua/500ua AC: 4 ranges zero to 100ua/500ua/1ma/5ma

MEGOHM INSULATION RESISTANCE AT 500 VDC 5 ranges: 1-50/5-250/10-500/50-2500/100-5000 megohm

ACCURACY DC: ±3% current and voltage AC: ±4% current and voltage for up to 1ma range AC: ±5% voltage for 5ma range MEGOHM: ±5%

LEAKAGE CURRENT TRIP-SET-POINT DC: 1ua-500 ua continuously adjustable AC: .02ma-5ma continuously adjustable

NON-DESTRUCTIVE HIGH POTENTIAL TEST APPLICATION Continuously adjustable leakage current trip-set-point from 1ua to 5ma may be used for non-destructive high potential tests

CORONA Scope output per MIL-T-27B and per ASTM D1868-61T Audible output via speaker for corona detection

ZERO START FOR H.V. OUTPUT Minimizes erroneous electrical test condition. Eliminates hysteresis from previous on-off usage

FINISH Cabinet: Hammertone. Panel: Semi-gloss light green. Other colors available on special orders

WEIGHT 35 pounds

PORTABILITY Handles provided for ease of carrying

FEATURES

DC OR AC DIELECTRIC STRENGTH TESTS
- ☐ Edgewise meter calibrated to read 0-10 kvdc or 0-5 kvac
- ☐ 0-1000 vdc expanded scale provded by using leakage current meter
- ☐ KV meter re-calibration

DC OR AC LEAKAGE CURRENT MEASUREMENTS
- ☐ I.C. operational amplifier used for linear, damage-free measurement of leakage current.
- ☐ DC and AC leakage current range switch
- ☐ Microamp meter re-calibration

INSULATION RESISTANCE MEASUREMENTS
- ☐ 5 ranges up to 5000 megohms at 500 vdc
- ☐ Up to 100,000 megohms at 10 kvdc

CORONA LEVEL VOLTAGE TESTS
- ☐ Scope output for visual peak-to-peak corona level indication
- ☐ Speaker output with volume control for audio corona detection

SAFETY PROVISIONS
- ☐ Continuously adjustable leakage current trip-set-point from 1 ua to 5 ma may be used for NON-DESTRUCTIVE high potential tests
- ☐ Flux-gate H.V. transformer (model HVT-1) automatically decreases the output voltage when overloaded or short circuited.
- ☐ Zero start interlock to minimize erroneous application of test condition
- ☐ Positive selection of DC or AC function by relay logic to have only DC or AC output, but not both
- ☐ Leakage current trip set, flux-gate transformer and zero start interlock doubles as safety feature to the operator

SIMPLICITY
- ☐ Easy-to-operate, illuminated instructional display

CONVENIENCE
- ☐ High voltage on/off/momentary switch for abrupt voltage application on the sample under test

Easy to use, illuminated functional operation.

GEO SPACE SYSTEMS, INC.

PRECISION INSTRUMENT SYSTEMS AND EQUIPMENTS

COMPLETE INSTRUMENT CONTROL SYSTEMS

MOVABLE TURRET ASSEMBLY & CONTROL SYSTEM SACRAMENTO PEAK OBSERVATORY

The Air Force Cambridge Research Laboratories' Sacramento Peak Vacuum Telescope is a vivid demonstration of the Company's depth of diversified talent and systems capability.

This telescope, with associated instrumentation and electronics, is located at Sunspot, New Mexico, 9200 feet above sea level. It stands 136 feet above ground level and extends 221 feet into the heart of the mountain.

The instrumentation and electronics furnished by Geo Space Systems, Inc., will serve as the operating controls of the telescope. It is designed to auto-track or track on a programmed basis, the sun, other stars or planets and will enable scientists to learn more about the physical composition and activity of these bodies. The instruments can provide continuous automatic compensation for the rotation of these bodies with respect to their celestial coordinates during all tracking phases. One hoped-for result of these studies will be the ability to forecast accurately solar flares. This ability will be of great importance to world-wide communications and to space programs.

The GSS role in this program involved design, production and installation of an optimum switched, non-linear servo control system to drive the 10,000 ft/lb torque motor which rotates the 230 ton evacuated optical tube forming the lower part of the telescope; and the servo control systems operating the upper turret section and its precision components, including solar-optical error detectors yielding auto-track accuracy within 30 arc sec. GSS is also building and installing the large spectrograph and the Echelle spectrograph.

TIME/FREQUENCY CONTROL EQUIPMENT

GSS VLF RECEIVERS

The GSS VLF receivers are designed for precision phase monitoring of VLF stations or rating of local standards. They are also capable of monitoring the new Omega stations when used with a suitable commutator. Characteristics are standard inputs of 100 kHz or 1 MHz, tuning range of 10 to 30 kHz in 50 Hz increments, mechanical or electronic servo, .006 Hz servo bandwidth, 10 nanovolt sensitivity and a built-in chart recorder for read-out. Units are line operated with optional DC standby input available.

OMEGA SYSTEM

The Omega Navigation System provides navigation for ships and aircraft with excellent accuracy. Results are obtained with readouts of "lane crossings" and an analog position voltage. Suitable outputs are also provided for interfacing with a computer for more sophisticated readout and data analysis.

VLF ANTENNA MULTICOUPLER

This multicoupler can reduce such roblems as desensitization, phase hift, cross-coupling interference, and oherent ground circuit interference. put impedance is 50Ω, with 8 indeendent 50Ω outputs featuring 50 db olation, and a gain of 3 db.

VLF LONG-WIRE AND WHIP ANTENNAE

The AT-10 long wire antenna and matching network provide excellent VLF reception, and allows use of a 50Ω coaxial transmission line.

The WA-10 whip antenna excels in areas of heavy horizontally polarized man-made noise.

COHERENT SIGNAL GENERATOR

This instrument furnishes a stable and controllable input signal for complete, rapid testing of performance characteristics of VLF receivers, including sensitivity, stability, accuracy, time constant and lag, deadband, noise rejection, adjacent channel rejection, intermodulation distortion, image response, and desensitization. The reference and the GSC-12 outputs are simultaneously monitored by the receiver under test, yielding data that is an absolute measure of the receiver's response.

BATTERY POWER SUPPLY

The GSS standby battery power supplies have been designed to furnish emergency DC power to critical equipment when primary AC power fails. Stable output voltage is obtained from nickel-cadmium batteries for long periods. Integral circuits provide fast and trickle charge. In the fast charge mode, batteries are restored to full charge in less than 8 hours. Full voltage life is dependent upon Amp/Hour rating of batteries supplied and the load current. Indication of approximate charge status is provided by a front panel meter and indicator lights.

As a leading manufacturer of standard frequency correlation and time signal nchronization equipment, Geo Space Systems, Inc. has successfully met the owing needs for time synchronization between geographically separated ations.

With its equipment serving the U. S. Army, Navy, NASA and FAA, and by meeting their stringent requirements, Geo Space is continually expanding its efforts develop new approaches and instrumentation in this field.

Solitron DEVICES, INC.

Greibach true RMS passive analog meters

Greibach RMS Meters combine the proven Bifilar Suspension system with a new, proprietary solid state transducer called transquare. These precision meters achieve measurements with an accuracy of 0.5% full scale.

Exceptional stability with repeatability of better than 0.1% is obtained since no amplifiers, power supplies or other active components are used in the simple meter design. Input is completely isolated as there is no coupling of meter circuits through power transformers of components. In addition, Greibach RMS Meters are capable of withstanding 100X overcurrent. This overload capacity applies to the most sensitive current ranges.

Greibach Meters also have low insertion loss resulting in minimal disturbance to the circuits under test. Greibach meters offer large, easy-reading scales for best visual accuracy. Scales are at least 6″ long and individually enscribed in a calibration-marking process. One unique feature of the Greibach meters is their leight-bar readout that completely eliminates normal reading difficulty due to parallax.

Cases are formica and aluminum for both ruggedness and eye appeal. Several styles are offered including Portable, Panel-Mounted and Edgewise Panel-Mounted.

OUR ACCURACY IS TRACEABLE TO THE BUREAU OF STANDARDS.

DC AMMETERS
- NANOammeters—¼% and ½% accuracy, from 50 nanoamperes, 15 ranges to ½ A.
- MICROammeters—¼% and ½% accuracy, from 1 microamp, 22 ranges to 10 A.
- MILLIammeters & AMMETERS—¼% and ½% accuracy, complete coverage to 100 amps full scale.

DC VOLTMETERS
- VOLTmeters—from 1 millivolt to 1000 volts full scale, 1 K to 30 K ohms per volt.
- VOLT-AMMETERS—¼% and ½% accuracy, up to 23 ranges in each instrument.
- VOLT-POTENTIOMETERS—20,000 ohms/volt as voltmeter, infinite impedance in balanced system.

AC-DC AMMETERS
- MICROammeters—from 25 microamperes full scale, 0.5% accuracy.
- MILLIammeters & AMMETERS—complete coverage from 1 milliamp to 30 amperes with 0.5% accuracy.

AC-DC VOLTMETERS
- VOLTmeters—from 30 millivolts to 1000 volts with ½% accuracy.
- HIGH FREQUENCY AMMETERS—from 1 milliampere to 1000 amps full scale with frequency coverage from 30 Hz to 10 KHz. ½% accuracies.

WATTMETERS
- MILLIwattmeter—from 10 milliwatts to 10 watts full scale, 1% accuracy and 0.1% repeatability.
- W-A-V wattmeter—a true multimeter for volts, amps and watts from 30 Hz to 10 KHz, ½% accuracy and 1 to 10 watts at 25 v, 10 to 100 watts at 250 v. Additional ranges with external current transformers.

GALVANOMETERS

From Honeywell: Nine ways to make data do what you want it to

Whether your problem is transducing data, conditioning a signal . . . readout or recording, Honeywell has the experience, the instruments, the complete data acquisition systems you need for a better solution.

Statham Transducers
Need someone to assume single source responsibility for your measurement problems? Honeywell has the Statham family of general purpose strain gage transducers . . . a line so complete, we can help you measure virtually any parameter.

Signal Conditioning
Our complete line of signal conditioning devices, includes everything from strain gage control units to attenuators and amplifiers; gives you interface between transducer and measuring, monitoring or recording instruments.

Digital Multimeter
A low-cost, versatile meter providing direct readout of transducer output as well as measurement of AC/DC voltage and current, plus resistance, in general purpose trouble-shooting applications.

X-Y Graphic Recorders
Make direct recordings of transducer outputs with respect to time or other independent variables.

Strip Chart Recorders
For highly accurate measurement and recording of long-term transducer outputs – 1 or 2 channel.

Ink Writing Oscillographic Recorders
Record up to eight channels simultaneously for simplified correlation.

Light Beam Oscillographic Recorders
Multiple channel recording of signals requiring higher frequency response.

Magnetic Tape Recorders
A permanent record available for repeated analysis, remote display and/or control functions.

And complete systems
If your need is for a complete data acquisition system . . . incorporating single or multiple data channels . . . Honeywell can supply this as well, completely installed and ready to go on-line.

For additional information about these products, contact: Honeywell, Test Instruments Division, P. O. Box 5227, Denver, Colorado 80217.

Honeywell

SERVICE TEST EQUIPMENT

5", Wide-band Industrial and General Purpose Oscilloscope

MODEL 770A

Calibrated 4 MC DC vertical amplifier with 8-step and vernier attenuator, covers 0.01v/div. to 50v/div. 80nsec rise time. Built-in square wave calibrator. Eighteen direct reading, calibrated sweep rates from 0.5 sec/div. to 1 μsec/div. Choice of free-running, driven or automatic sweep modes. 5X sweep magnifier. Flat-faced, post-accelerated CRT. Illuminated, calibrated graticule. 11" w., 13¾" h., 17½" d. Shipping weight 57 lbs.

$475.00

Wide-Band Service Technician's Oscilloscope—5" AC—5 cps to 4.5 MC within 3db.

MODEL 677

40 mv/in. sensitivity. Pre-set horizontal and vertical sweep positions. Has sharp, bright trace with astigmatic correction. Facilitates detailed observation of TV sinc wave forms, including 3.58 MC color burst. 9½" w., 14" h., 18½" d. Shipping weight, 36 lbs. **$269.50**

Dynamic Beta Transistor Tester.

MODEL 870

Measures AC and DC Beta. Variable collector voltage and current permits tests according to manufacturer's specifications, Tests switching transistors. Measures large signal DC Beta on power transistors—small signal AC Beta on low and medium power transistors. Collector Test current variable up to 2 amperes, permitting Beta measurement on power transistors rated 5 amperes or more. Icbo Ranges: 100μa, 1 ma, 10 ma. Beta Ranges: 0-100, 0-300. Replaceable roll chart. 14⁹⁄₁₆" w., 7⅞" h., 11¾" d. Shipping weight, 22 lbs.

$425.00

Dynamic Beta IN-CIRCUIT Transistor Tester.

MODEL 890A

Utilizes unique test circuit to measure AC Beta in OR OUT of circuit with 5% accuracy. Measures these in-circuit parameters: AC Beta, Ic, Rin (transistor input resistance), Z ohms (base-emitter circuit impedance). Measures AC Beta, Ic, Rin and Icbo out of circuit. Portable, completely self-contained, fully transistorized. 10¾" w., 6½" h., 9" d. Shipping weight, 8 lbs. Shipped less batteries. **$235.00**

Industrial and Laboratory Cardmatic® Automatic Tube Tester

MODEL 123R

Card programmed complete "Fringe" tests, saturation and cut-off tests, in addition to basic Gm measurement. 5% accuracy. Supplied with 575 selected cards. May be ordered less cards. 16½"w., 9¼"h., 19½"d. Shipping weight, 57 pounds.

$795.00

Technician's High Speed Deluxe Portable Tube, Transistor and Diode Tester

MODEL 6000A

Tests latest tubes including Compactrons, Novars, 5- and 7-pin Nuvistors, 10-pin "headers". Sensitive, neon lamp type instantaneous interelement leakage and shorts test. Gm to 15,000 μmhos in three ranges. Also tests transistors and diodes. 16¾" w., 7½" h., 11¾" d. Shipping weight, 21 lbs.

$297.50

Industrial and Communications Portable Tube Tester

MODEL 752A

Designed for use in maintaining communications equipment and industrial electronic apparatus. New voltage regulator test circuit tests VR tubes to handbook specifications, including firing point, regulating voltage and current range. Tests all the latest tubes including Compactrons, Novars, 5- and 7-pin Nuvistors, 10-pin "headers". Push button test feature for dual-section tubes speeds selection of tubes for balanced or matched characteristics, Gm to 30,000 μmhos in five ranges. Interelement leakage read directly on the meter (sensitivity to 10 megohms). Illuminated meter and roll chart. 18⅜" w.., 7½" h., 16¾" d. Shipping weight, 27 lbs, **$475.00**

Industrial and Laboratory Portable Tube Tester

MODEL 539C

Tests all the latest tubes, including Compactrons, Novars, 5-and 7-pin Nuvistors, 10-pin "headers", VR tubes, low power thyratrons, "4-digit" types. VR test evaluates voltage regulator tubes under actual operating conditions. Panel terminals provide access to grid, plate, cathode and heater circuits, permitting direct measurement of voltages and current for "non-standard" or "tailored" tests. Metered line voltage, metered grid voltage. Dual leakage readings: directly on meter or by neon short indicator (sensitivity to 50 megohms). 16¾" w., 7½" h., 18⅜" d. Shipping weight, 35 lbs.

$625.00

Crystal-controlled, High Output AM-FM Sweep and Marker Generator

MODEL 288AX

A complete alignment instrument with built-in decibel meter, crystal-controlled reference frequency. 8 bands from 35KC to 160MC FM, 110 KC to 110 MC AM. New 35-125KC ultrasonic band. Provides for internal or external amplitude or frequency modulation of RF output. Complete with 100 KC/1000 KC crystals, cable assembly and meter leads. 16" w., 13" h., 7" d. Shipping weight, 33 lbs.

$415.00

DIGITAL MEASURING SYSTEM

WHAT IS A HICKOK DIGITAL MEASURING SYSTEM?

The HICKOK Digital Measuring System is an all solid-state, three and one-half digit precision measurement system that offers unlimited expansion capability through plug-in additions resulting in a specialized instrument for each type of measurement.

The variety of plug-ins available negates the need of several instruments to measure voltage, frequency, resistance, capacitance, etc., because the Main Frame will accept any one of the DP series plug-ins for measurement of these parameters at a cost considerably less than individual voltmeters, counters, etc.

The system is further expanded by two pieces of peripheral equipment. The Model 4900 Printer is used with one or two Model 3202Ps to provide a permanent record of measurements. The Model 1050 Set Point Controller can be used in a variety of ways with any of the plug-ins to provide a signal for a closed feedback loop control system, or, for example, to indicate a go-no go condition on parameter measurement.

The illustration at the bottom of this page shows the latest plug-in modules that are available for use in the system. Detailed descriptions and specifications are given in the following pages.

PLUG-INS AVAILABLE

DC MICROVOLTMETER — **Model DP110**
Range: 0.001 mv (1 microvolt) to 1,300 volts
Resolution: 0.01% of reading (using 1000% overrange capability)
Accuracy: ± 0.05% of reading ± 1 digit

DC VOLTMETER — **Model DP100**
Range: 00.1 mv to 1,500 volts
Accuracy: ± 0.1% of reading ± 1 digit

AC VOLTMETER — **Model DP130**
Range: 0.01 mv to 1,000 volts
Frequency range: 22 Hz to 1.0 MHz
Accuracy: ± 0.1% of reading ± 1 digit

DC CURRENT ADAPTER — **Model D310**
Range: 000.1 nanoamps to 13 amperes
Accuracy: ± 0.15% of reading ± 1 digit

100 MHz COUNTER — **Model DP160**
Range: 00.1 Hz to 100 MHz
Accuracy: ± 0.00005% of reading ± 1 digit
Sensitivity: 20.0 mv
Resolution: up to 7 digits

1 MHz COUNTER — **Model DP150A**
Frequency Measurements: 00.1 Hz to 1 MHz
Period Measurements: 00.1 ms to 999. sec
Accuracy: ±0.0005% of reading ± 1 digit
Resolution: up to 7 digits

EVENT COUNTER — **Model DP140**
Counting rate: up to 1,000,000 counts/second

TIME INTERVAL METER — **Model DP210**
Range: 0.01 ms to 1,999 seconds
Accuracy: ± 0.0005% of reading ± 1 digit

RESISTANCE METER — **Model DP170**
Range: 0.001 ohm to 1,000 megohms
Accuracy: ± 0.1% of reading ± 1 digit

CAPACITANCE METER — **Model DP200**
Range: 0001. picofarad to 10 millifarads
Accuracy: ± 0.1% of reading ± 1 digit

NOTE
All plug-ins may be used with the following Main Frames. DMS3200, DMS3200A, DMS3200P, Model 3202, Model 3202P.

AC AND DC VOLTAGE AND DC CURRENT

DC MICROVOLTMETER

- TRULY INTEGRATING SYSTEM
- 1 MICROVOLT SENSITIVITY
- FLOATING INPUT
- 4 DIGIT RESOLUTION
- SCALE EXPANSION
- 0.05% ACCURACY

GENERAL DESCRIPTION

The Model DP110 DC MICROVOLTMETER plug-in is a true integrating voltmeter which measures DC voltages from 1 microvolt to 1300 volts with a basic accuracy of ±0.05% of reading ±1 digit. The SCALE EXPANSION feature provides four digit (0.01%) resolution on any range.

The input circuitry is fully floating, with more than 10,000 megohms isolation between input ground and chassis or power line ground. The 3000 volt breakdown voltage makes it possible to use the instrument safely for above ground measurements.

The DP110 and all of the other voltage plug-ins maintain a constant 10 megohm input impedance to assure a constant and minimum range-to-range loading on the circuit under test.

Full four digit resolution is obtained by depressing the EXPANDED push button to enable the DP110 to automatically overrange one decade and display the fourth most significant digit.

DC CURRENT ADAPTER

- 1 NANOAMP TO 13 AMP RANGE
- FLOATING INPUT
- AUTO POLARITY
- 4 DIGIT RESOLUTION
- 1,300% OVERRANGE
- LOW INSERTION LOSS
- 0.15% ACCURACY

GENERAL DESCRIPTION

The model D310 CURRENT ADAPTER is used with the Model DP110 DC VOLTMETER and 3202 MAIN FRAME for measurement of DC current from 0.1 nanoampere to 13.0 amperes with an accuracy of ±0.15% of reading ± 1 digit and resolution up to 4 full digits.

The D310 consists of a combination of precision current shunts selectable through the front-panel push-button switch. Voltage across the shunts is measured by a DP110 MICROVOLTMETER plug-in in the 3202 MAIN FRAME and readout is directly in units of current. Range selection need only be made on the D310. The high sensitivity of the DP110 makes it possible for the shunt resistance to be very low in value, minimizing the insertion loss in circuits being measured.

Because the D310 is used in conjunction with the DP110, the features of the DP110 such as SCALE EXPANSION and AUTO-POLARITY are applicable to the D310.

The Current Adapter offers a completely floating input, with greater than 10,000 megohms isolation between input ground and chassis or power line ground. The 3,000 volt breakdown feature of the DP110 is applicable to the D310.

ENERAL DESCRIPTION

ıe Model DP130 AC VOLTMETER plug-in measures AC ›ltages from 10 microvolts to 1,000 volts in six ranges with ıe 3202 Main Frame. The basic accuracy of ±0.1% of read-g ±1 digit on all ranges includes effects of ambient mperature change from 15°C to 35°C, line voltage varia-ons, and line frequencies from 47 Hz to 400 Hz. The 1,000 egohm 20 picofarad input impedance minimizes circuit ading even for high frequency measurements.

ıis instrument is designed to provide RMS readings when easuring sine wave signals. Accurate indications of the MS value of square and triangular waveform inputs may be ›tained by using correction factors specified in the instruc-›n manual. The DP130 is designed to assure the stipulated :curacies so that certification may be obtained from NBS ›rtified calibration laboratories.

MODEL DP160

GENERAL DESCRIPTION

The DP160 100 MHz COUNTER provides digital display of signal frequencies from 0.1 Hz to 100 MHz when used with the 3202 or 3202P Main Frame. The instrument is direct-counting and utilizes no heterodyning to achieve its 100 MHz measurement capability. Through utilization of the overrange capability, the normal three and one-half digit display of the 3202 Main Frame can provide up to 7-digit resolution with an accuracy of ±1 digit, making it usable for frequency measurement of communications frequencies in addition to normal counter applications. A front-panel push-button selector switch permits readout of any 3-digit sector of a 7-digit input signal being measured, thus achieving the resolution specified. Alternatively, a slave output permits its use with a second Main Frame and DP140 Slave Plug-in combination to provide a full 6-digit simultaneous display, if desired.

Emphasis has been placed on the high sensitivity of the DP160 since signals being measured at these higher frequencies are normally at low levels. Further, to minimize any possibility of overloading the instrument's input, a front-panel input signal attenuator is provided. Either AC or DC coupling is available through a selector switch. A 10:1 attenuation accessory probe is available for minimizing circuit loading.

A precision crystal controlled time base with exceptionally low aging rate is used in the DP160 to achieve the accuracies specified, and recalibrated is simplified by a front-panel 1 MHz output which may be beat against NBS standard WWV. Built-in self test provisions are provided and front panel indicator lamps simplify the Trigger level adjustment.

MODEL DP150A

GENERAL DESCRIPTION

The DP150A 1 MHz COUNTER provides digital display of both frequency and period of sinewaves, squarewaves, pulses, or other complex waveforms.

Frequencies of 0.1 Hz up to 1.0 MHz and periods of 0.1 millisecond to 999 seconds may be measured. A 10:1 attenuation accessory probe is available for minimizing circuit loading.

Through utilization of the overrange capability of the plug-in, the normal three and one-half digit display of the 3202 Main Frame can provide up to 7-digit resolution, and with an accuracy of ±0.005% of reading ±1 digit. A front-panel switch selection permits readout of any 3-digit sector of a 7-digit input signal being measured. The plug-in also includes provision for event totalizing and a manual reset, permitting its use in production counting applications.

Built-in internal checks at 1 Hz, 1 kHz, and 100 kHz are provided. An output from the Trigger is provided on the front panel as a utility pulse output for oscilloscope trigger, time mark generator, etc. A slave output also permits use with a second Main Frame/DP140 Slave Plug-in combination to provide full 6-digit simultaneous display.

SPECIFICATIONS

RANGES
Frequency measurements from 0.1 Hz to 1.0 MHz.

00.0 to 199.9 Hz	(example of 6-digit resolution to measure frequency of 875,450 Hz read 875. on kHz range, then 450. on Hz range)
000. to 1999. Hz	
0.00 to 19.99 kHz	
00.0 to 199.9 kHz	
000. to 1000. kHz	

Period measurements from 0.1 millisecond to 1999 seconds.

00.0 to 199.9 ms	(example of 6-digit resolution to measure period of 475.324 ms read 475. on seconds range, then 324. on ms range.)
000. to 1999. ms	
0.00 to 19.99 sec	
00.0 to 199.9 sec	
000. to 1999. sec	

ACCURACY
±0.005% ± 1 digit, 15°C to 35°C ambient (50 ppm)
± 0.0005% ± 1 digit, short term accuracy at constant ambient temperature after calibration against NBS standard

GATE TIMES
1 millisecond to 10 seconds in five decades

INPUT IMPEDANCE
1 megohm shunted by 24 picofarads

INPUT SENSITIVITY
10.0 mv RMS

OVERLOAD
200v RMS

NOISE REJECTION
Selectable input for low frequency noise rejection to permit frequency measurements of high frequency signals which contain low frequency noise.

DISPLAY TIME
0.1 sec/reading to 10 sec/reading plus infinity.

WEIGHT
3½ pounds

PRICE
$255.00

'IME INTERVAL METER

10μSEC to 1999 SECOND TIME INTERVAL OR PERIOD MEASUREMENT
SEPARATE LEVEL AND SLOPE ADJUSTMENTS
20 MILLIVOLT SENSITIVITY
USE WITH DP140 FOR 6-DIGIT DISPLAY
0.005% ACCURACY
7 DIGIT RESOLUTION

ENERAL DESCRIPTION

ıe Model DP210 TIME INTERVAL METER provides a digital splay of time interval or period measurements from 10 icroseconds to 1999 seconds with an accuracy of ±0.0005% reading ±1 digit in the 3202 Main Frame.

ɔmpletely separate START and STOP inputs are provided, ıch with independent adjustments of trigger level, attenuaɔn, and slope. Thus, start and stop commands from the ɜvice being measured may be from different sources and ɜir isolation is maintained. A front panel selector switch ɜrmits the choice of either TIME INTERVAL measurement "one-shot" or repetitive phenomena or PERIOD measureent of repetitive signals. Either is displayed with resolution ɔ to eight digits in the case of a 1999 second measurement. ıis is achieved by readout of three digit sectors to obtain ı accumulative eight digit reading.

vo inputs may be internally connected through a front panel vitch without change in input impedance for measurements ıen both start and stop information is from a common signal ɔurce. A built in "self-check" tests for proper operation of ternal count circuitry. A "gate output," when used with an ɔilloscope, permits the operator to adjust trigger points sually.

ıe 20 millivolt sensitivity and 1 megohm input impedance ı all ranges permit use of the plug-in with signal sources hich may have low output levels and critical loading charɔteristics. Front panel trigger level controls allow accurate ɜlection of trigger point on any input wave shape, and selectɔle slope permits triggering on either positive or negative-goɔg wave fronts. Both STOP and START inputs are DC coupled.

slave output on the plug-in permits its use with a second ain Frame/DP140 Slave Plug-in combination to provide full x-digit display.

MODEL DP210

SPECIFICATIONS

RANGES
Six ranges for Time Internal measurements, six ranges for Period measurements.

ıENERAL DESCRIPTION

ıe type DP140 EVENT COUNTER plug-in is designed for use ith any Digital Measuring System Main Frame to provide ıe user with the following capabilities:

. Used singly, in a Main Frame, it permits counting of incoming pulses, with the totalized number appearing on the Main Frame three and one-half digit readout. Additional combinations of DP140 Plug-ins and Main Frames may be added which, when operated in cascade, can provide an accumulated readout of six, nine, twelve, etc., digits.

. Operating as a Slave Plug-in, the DP140 in a Main Frame may be driven from the output of a Main Frame DP150A or DP160 Frequency Counter, or DP210 Time Interval Meter combination to provide full six-digit display of frequency, period, or time interval.

RESISTANCE AND CAPACITANCE

RESISTANCE METER

- 0.001 OHM TO 1,000 MEGOHM RANGE
- AUTOMATIC BRIDGE BALANCE
- LEAKAGE CURRENTS ELIMINATED ON HIGH RESISTANCE MEASUREMENTS
- LEAD RESISTANCE ELIMINATED ON OHMS MEASUREMENT
- EXTREMELY LOW POWER TO DEVICE UNDER TEST
- 0.1% ACCURACY

GENERAL DESCRIPTION

The DP170 OHMMETER plug-in provides display of resistance measurements from 1 milliohm to 1,000 megohms with an accuracy of ±0.1% of reading ±1 digit with the 3202 Main Frame. The measurement system is that of a true four terminal Wheatstone bridge. The front panel null-out indicator shows the operator when automatic bridge balance is complete and a reading may be taken. Null time is nominally one second.

Four terminal measurement technique is used in the DP170 so that lead resistance will not cause inaccuracies on extremely low resistance measurements. This feature is very useful when measuring resistance of motor windings, coil windings, etc.

A "Guard" voltage is provided for high resistance measurement so that external leakage paths and spurious leakages in components are automatically eliminated.

The low power output of the DP170 makes it very useful for safe measurements on semiconductor devices.

CAPACITANCE METER

- 1.0 PICOFARAD TO 10,000 MICROFARADS RANGE
- NO POLARIZING VOLTAGE NECESSARY
- LOW VOLTAGE TO DEVICE UNDER TEST
- ±0.1% ACCURACY

GENERAL DESCRIPTION

The type DP200 CAPACITY METER plug-in provides digital display of capacity measurements from 1 picofarad to 10,000 microfarads, with an accuracy of ±0.1% of reading ±1 digit when used with the 3202 Main Frame.

Capacity measurement is by means of a bridge comparing the stored charge of the unknown capacitor with that of a precise internal standard capacitor. The test signal is a low DC potential so no external polarizing voltage is necessary for electrolytics. The measurement is relatively unaffected by the Q of the component being tested, resulting in highly accurate capacity measurements. A provision has been made for balancing out test lead capacity for low capacitance measurement accuracy.

Measurements with the DP200 are extremely simple, requiring no manual balancing or nulling operations to make a capacitance measurement. Test leads need only be clipped to the capacitor under test and a direct three and one-half digit reading gives the capacity value directly. Low test voltages and currents are used to protect components and operator.

MAIN FRAMES

- 3½ DIGIT READOUT
- ACCEPTS ALL DP SERIES PLUG-INS
- OVERRANGE INDICATOR
- PRINTER OUTPUT (MODEL 3202P)

MODEL 3202P

GENERAL DESCRIPTION

The Model 3202 and 3202P MAIN FRAMES contain the digital display system, power supplies, and accepts all plug-ins of the DP series. A 3½ digit, all electronic display makes maximum use of the high accuracy capability of the analog-to-digital converters in the System. Because of the high overrange capability of some plug-units used with these Main Frames, the 3½ digit display can provide an equivalent of a 4, 5, 6, or 7 digit display, providing resolution up to 1 part in 10^7.

Integrated circuits along with discrete transistors constitute the all-solid-state circuitry, providing high reliability and long life. The display counter circuit has a response of 5 MHz, assuring fast, reliable count and readout of input pulse trains from the plug-ins. A self-contained power supply provides all operating voltages for the Main Frame circuitry as well as plug-in units. All critical voltages are zener regulated.

The two Main Frame models are similar mechanically and electrically. The Model 3202P, however, offers the following additional features:

1. Non-blinking display through use of buffer-storage circuitry. A rear panel switch is provided to select either buffered or unbuffered display mode.
2. Printer output. 10-line decimal data is provided on a rear-panel connector along with decimal location, polarity, wrong polarity indication, overrange indication, and print command data. Out-puts are fully buffered and can be used to operate external device such as the HICKOK Model 4900 Digital Printer or the Model 1050 Set Point Controller.

C81 — $35.00

THE HICKOK ELECTRICAL INSTRUMENT COMPANY • CLEVELAND, OHIO 44108

PERIPHERAL EQUIPMENT

DIGITAL PRINTER

- COMPANION INSTRUMENT TO MODEL 3202P MAIN FRAME
- FIELD EXPANDIBILITY
- 10 SECOND TO 120 MINUTE TIMER
- EASE OF OPERATION
- DUAL CHANNEL OPTION
- FULL FOUR DIGIT PRINTOUT OF THE THREE AND ONE-HALF DIGIT MAIN FRAME READING

GENERAL DESCRIPTION

The Model 4900 DIGITAL PRINTER is a companion unit to the HICKOK Model 3202P Digital Measuring System and provides a print out of up to ten columns of digital information from one or two independent sources. The 4900 may also be used with any device which provides ten-line decimal or BCD coded data outputs. Voltage, frequency, time period, resistance, capacitance, or event counts are examples of the type of data which may be recorded in printed form.

The printer has integrated circuit electronics, permitting it to operate directly from standard low-voltage, low-level logic outputs. Both circuit boards and print wheel mechanisms are in modular plug-in form, thus providing the user with a wide variety of column, channel, and input code options. Options may be changed in the field if desired.

Operation of the unit is simple and a number of function selections are available to the operator. Inputs may be taken from two independent sources simultaneously or singly as preselected by a front-panel push-button switch. The print command is also selected by the operator, permitting him to choose print command as follows: External, Manual, Automatic, or at calibrated time intervals switched from the front panel in 36 steps from 10 seconds to 120 minutes. Maximum print rate is one line/second from an external print command signal.

Basic ten-line decimal logic is standard for the printer input. However, by adding the appropriate decoding board, BCD 1248 or 1224 codes may be used to drive the unit. Print is either by pressure-sensitive paper or by inked impression on standard 3½" adding machine paper. A replaceable ink cartridge provides 250,000 lines of printing. The printing mechanism slides out from the front of the unit to permit changing of paper rolls and ink cartridges with ease.

SPECIFICATIONS

PRINT OUT
Either three digit or full four digit print-out of the Model 3202P three and one-half digit display through print-out of all 10 numerals of the fourth overrange digit.
First digit of the 4 or 5 column print-out is the code print wheel digit which indicates polarity, decimal location and wrong polarity (overrange code controlled by front panel switch)
Single or dual channel, 4 or 5 column print-out options available. (one code column)

MODEL 4900

ACCURACY
Identical to input device used
PRINTING RATE
One line per second
DATA INPUT REQUIREMENTS
Parallel entry, 10 line decimal, positive logic, "0" state must be less than +0.4v and greater than −4.0v. "1" must be greater than +1.0v but less than 4.0v.
PRINT COMMAND
Activated on positive going portion of +2.0v or −4.0v pulse. Minimum rise time (positive going portion) 10.0v/microsecond.
OPERATING MODES
"Auto" prints each time source takes a reading
"Timer" prints on a preset time interval basic from 10 seconds to 2 hours
"External" prints upon application of an external print command signal.
TRANSFER TIME
17 milliseconds
PAPER REQUIRED
Roll 3⅞" width x 3½" diameter (standard adding machine paper) or pressure sensitive paper (no ink required.)
POWER REQUIREMENTS
115 VAC or 230 VAC ±10% 50 to 60 Hz
7 watts idle
35 watts at one line per second printing
SIZE
9⅝"W x 6⅞"H x 14⅜"D
WEIGHT
21 pounds

DIGITAL SET POINT CONTROLLER

- UPPER AND LOWER THREE FULL DIGIT SET LIMITS
- COMPANION INSTRUMENT TO MODEL 3202P MAIN FRAME and MODEL 4900 PRINTER
- FRONT PANEL INDICATOR LIGHTS
- CONTACT CLOSURE AT UPPER AND LOWER LIMITS AND ACCEPT

GENERAL DESCRIPTION

The Model 1050 DIGITAL SET-POINT CONTROLLER, when used with the Hickok Digital Measuring System, provides a feed-back control signal to adjust the operation of a peripheral function at pre-determined measurement values, as selected by the operator. Set-points may be set to 1 part in 1,000 and are absolute, assuring start or stop functions at specific values with zero-set-point error. Although the controller was designed primarily as a companion unit to the Model 3202P system, it can be used with any device which provides ten-line decimal data outputs at the proper logic levels and appropriate read commands.

When used with the DMS Main Frame and the appropriate DP series plug-in, digital measurements of voltage, frequency, period, resistance, capacity, events (and with appropriate transducers, pressure, flow, temperature, strain, etc.) can be used to activate external mechanical feeds, drives, print-outs, reject hoppers, feed motors, fuel adjustments, blowers, tabulation recorders, etc. Provision has been made for selection of three full digits of both upper and lower set-points so that external control will be activated when a reading exceeds an upper-set-point number or drops below a lower set-point number, thus establishing an "Accept" range.

Two controllers may be used in tandem, along with two main frames and a DP140 Slave Plug-in to extend the normal three-digit control to six digits. Further, a HICKOK Model 4900 Digital Printer may be added to the system to provide a printed record of all measurements or selective measurements within or outside of the "accept" range. Internal relay switches permit use of the Model 1050 for control of other equipment.

SPECIFICATIONS

DATA INPUT
Parallel entry, 10 line decimal, positive logic. "0" state must be

MODEL 1050

from 0 to +0.4v. "1" state must be greater than +0.9v but less than 4.0v. Nominal source requirement 1v at 200 microamps.
FREQUENCY RESPONSE
1 MHz when operated as 3-digit controller
100 KHz when two units used as a 6-digit controller
READOUT
Indicates if measurements are within or outside of "accept" band
OPERATED MODES
NORMAL — used for all functions except events
EVENTS — used when scaling is to be controlled
RELAY CONTACT RATING
1.5 amperes/115v
POWER REQUIREMENTS
115 vac/220 vac, 47 to 400 Hz, 2 watts
WEIGHT
6½ pounds
DIMENSIONS
6½"W x 6⅞"H x 7¾"D
PRICE
$295.00

DIGITAL MULTIMETER

MODEL 3300

- 27 MEASUREMENT RANGES
- INTERNAL BATTERY PACK AND AC LINE OPERATION
- DESIGNED FOR RUGGED PORTABILITY
- BRIGHT READOUT WITH OUT-OF-RANGE INDICATION
- AUTOMATIC POLARITY
- AUTOMATIC ZEROING
- HIGH INPUT Z

GENERAL DESCRIPTION

The Model 3300 DIGITAL MULTIMETER is designed for portability with 27 ranges covering AC and DC voltage, AC and DC current, and resistance. The Multimeter may be operated either from the internal rechargeable battery pack, or 115/230 volt AC line.

The internal NiCad battery pack has an overnight recharge cycle of 16 hours that provides approximately 24 hours of operation. For example, the batteries can operate the Model 3300 for one hour a day for 24 days, or alternatively, eight hours a day for three days. This allows operation in field locations for extended periods of time. In addition, the batteries permit measurement with complete isolation from power line interference (infinite common mode rejection).

The Multimeter may be operated from the AC power line while the battery pack is being recharged. For battery only use, the permanently attached recharge power line cord can be conveniently stored in a rear panel receptacle.

Operator convenience and safety has been stressed in the design of the Model 3300. A color-coded front panel is provided for ease in selection of the 27 ranges. The test probes are permanently attached to the front panel and are fitted with a captive strap which conveniently stores the probes on the combination carrying handle and tilt bail. The case is completely isolated from the input terminals and contains no metal parts for operator protection on high voltage measurements. Furthermore, a high input impedance minimizes erroneous readings from loading of the circuit under test. The bright fluorescent readout includes automatic polarity indicator, decimal point and out of range indication.

A high impact resistant ABS plastic case, shock mount readout, and wide temperature operating range makes this a rugged instrument for field applications, as well as for laboratory and production line use.

Ohms	all	0.3% of full scale	200 ppm/C°

*1 Only

INPUT ISOLATION FROM GROUND

Infinite when operated on batteries
1500 volts peak when line operated (batteries charging)

INPUT IMPEDANCE AT PROBE TIP

DC 11 megohm/5 pf, includes 1 megohm isolation resistor
AC 10 megohm/200 pf

COMMON MODE REJECTION

Infinite
40 db on recharge

NORMAL MODE REJECTION

50 db at 40 Hz
60 db at 60 Hz
70 db at 120 Hz

DISPLAY

7 segment numerical indicators
Maximum display of 1999
Automatically positioned decimal point
Automatic polarity indicator
Out-of-range indication
Display rate: once per second

PROBES

Permanently attached

AC volts, amps, ohms	straight through with prod tip
common	insulated alligator clip
DC volts	1 megohm isolation resistor in prod

OPERATING POWER REQUIREMENT

Internal rechargeable battery, or 115/230 ±20% vac, 50/400 Hz. 5 watt line operation (battery charging).

DIMENSIONS

8"H x 5⅞"W x 4"D

WEIGHT

6 pounds

PRICE $395.00

includes internal battery pack and probes

ACCESSORIES

Insulated alligator clip, threaded to fit on prod tip.
Red (p/n 3300-120) $2.00
Black (p/n 3300-103) $2.00

10KV Probe, prod tip and alligator clip included
(p/n 16970-101) $75.00

25 MHz OSCILLOSCOPES

- DC TO 25 MHz BANDWIDTH (3 db point)
- SIMPLIFIED STABLE TRIGGERING TO 50 MHz
- 24 CALIBRATED SWEEP RANGES
- VERTICAL DELAY LINE
- ALL SOLID STATE FOR HIGH STABILITY

GENERAL DESCRIPTION

The Model 5000 (Single Trace) and 5002 (Dual Trace) are precise laboratory oscilloscopes designed to exceed the basic specifications of higher priced oscilloscopes. The all solid state design offers stability, long term reliability, cool operation, minimum maintenance, light weight, and low power consumption.

The vertical bandwidth specification of DC to 25 MHz (3 db point) satisfies most high frequency oscilloscope requirements in laboratory, quality control, inspection, and production activities. The roll-off characteristic is essentially Gaussion to assure clean step response and makes the instrument usable to over 50 MHz. The built-in vertical delay line provides nearly 50 nanoseconds of display prior to the trigger point on the input waveform.

Vertical sensitivity of 10 millivolts per division and 11 calibrated sensitivity steps (12 in the Model 5000) accommodate a broad range of input signal levels. The input impedance is 1 megohm shunted by 30 picofarads and the input circuitry is overload protected. A 10:1 accessory probe is available to reduce capacitive loading, and a straight through probe for operator convenience.

The overdrive characteristics of the vertical output section facilitates critical viewing or measurement of the waveform in detail. The vertical amplitude display of any waveform may be increased five times the CRT display area with essentially zero distortion. Any portion of a 30 division waveform may be positioned to the center of the display area.

The multi-turn horizontal position control allows display of any 10 division segment of the 40 division sweep. Thus, a signal may be viewed in detail up to 40 divisions after the trigger point. Sweep linearity is maintained throughout the 40 division sweep.

The horizontal amplifier bandwidth of DC to over 5MHz (3 db point) permits wide bandwidth waveform displays such as X-Y presentations. The input impedance is 1 megohm shunted by 30 picofarads.

An ultra stable triggering circuit provides solid waveform displays up to 50 MHz. Either the positive or negative slope of the input waveform may be selected to start the sweep. From the internal source, the sweep will trigger on waveforms as small as 0.2 division deflection. All triggering functions are selected by front panel push buttons which are clearly labeled for operator convenience.

4½"

5½"

3½" ROUND-250 DEGREE METER

46-250

All DC meters can be supplied with accuracy either 1% or 2% of full scale deflection. The AC meters, which use copper-oxide rectifier-type movements, have accuracy within 5% of full scale deflection under all conditions. These instruments are as accurate as panel mounting instruments having equal size and have the advantage of two and one-half times longer scale. They are damped in accordance with American Standards Association Specifications, and their response time is also in accordance with these specifications. Allows readings to be taken quickly and more accurately.

3½" SQUARE 250 DEGREE METER SAME AS THE ROUND 250 DEGREE METER

46

All DC meters can be supplied with accuracy either 1% or 2% of full scale deflection. The AC meters, which use copper-oxide rectifier-type movements, have accuracy within 5% of full scale deflection under all conditions. These instruments are as accurate as panel mounting instruments having equal size and have the advantage of two and one-half times longer scale. They are damped in accordance with American Standards Association Specifications, and their response time is also in accordance with these specifications. Allows readings to be taken quickly and more accurately.

2½" 250 DEGREE AIRCRAFT METER

56-250

This instrument is mounted in a regulation aircraft case per Army-Navy specification, including the shielding and dimensional requirements. Has scale approximately 4-3/8" long. Quick readability makes them desirable as flight instruments. Aircraft-type dial is available. Mechanism specially designed for aircraft service and will meet vibration-resistant requirements, etc.

4⅝" RECTANGULAR PANEL METER

68

Model 68 DC, Model 69 AC, Accuracy 1½%.

Developed specifically to meet requirements for a 4⅝" instrument that permits maximum length of scale, new efficiency small movement, and choice of two mounting stud locations to permit maximum versatility in semi-flush panel mount applications. Also available as an illuminated type with a new illumination technique that permits bulb replacement from front panel without necessitating removal of instrument from panel.

3½" ROUND RUGGEDIZED METER

46 HSR

The high Hickok standard of quality is now available in a ruggedized DC or rectifier type AC meter. This instrument provides the practical answer to requirements for shock proof meters with dependable accuracy. This highly efficient shock mount design permits pointer and scale divisions to be easily read when meter is under vibration. Rear panel is built with new screw-type terminals to eliminate solder connections. Also available in 2-1/2" and 4-1/2".

DIRECT READING FREQUENCY METER, AIRCRAFT TYPE

59

These Hickok improved self-contained frequency meters can be mounted in aircraft type cases of the large AN size. These are the smallest size frequency meters. This type of case is often convenient where space is a limiting factor. Suitable for aircraft use. Movement is shockproof. Case is dust and waterproof in accordance with Army-Navy aircraft instrument specifications. Radium or fluorescent dials and pointers available.

4½" 250 DEGREE RUGGEDIZED METER

48-250R

DC Model: 48-250R
AC Model: 49-250R (Rectifier type)
Accuracy: 2% as standard and available to 1%.
For flush mounting.

These long scale 250 degree arc angle instruments are now available as shock proof ruggedized and sealed. Permits a scale length approx. 2½ times as long as conventional instruments in the same size case. Use of these meters offers possibility of considerable saving to panel space. Available in 3½" and 4½" sizes.

2½" MINIATURE SQUARE PANEL MOUNTING

S 56

Flush mounting, phenolic case, wide flange only; and metal cases, wide and narrow flanges. Accurate within 1-1/2%. These miniature panel mounting instruments are of the standardized 2-1/2" size, but have extra long scale lengths by reason of the wide angle of deflection and longer scale radius. Five types of cases are available. Lance type pointers regularly supplied, however, small spade pointers can be furnished.

3½" ROUND FLUSH MOUNTINGS

46

Accurate within 1-1/2%. Large opening symmetrically designed admits a maximum of light to the dial. Thick flange eliminates danger of breakage and improves appearance. Metal dials with white background are supplied in all standard ranges. Special dial designs are supplied on quantity orders, at no extra charge. Include internal illumination.

Hickok is one of the foremost pioneers and manufacturers of electrical indicating instruments. Here shown are a few of the more popular types furnished. However, any practical range and type can be supplied. Your inquiry is invited. Kindly list details of your requirements. Prices are available on request.

3½" SQUARE FLUSH MOUNTINGS

S 46

Accurate within 1-1/2%. Large opening, symmetrically designed, admit maximum light to the dial. Thick flange eliminates danger of breakage and improves appearance. Require less panel space than round flush instruments. Metal dials with white background are supplied in all standard ranges. Special dial designs supplied on quantity orders at no extra charge, including internal illumination by means of bulb inserted in a socket through the instrument base.

HIPOTRONICS INC.

AC INSULATION TESTERS

Hipotronics AC Insulation Testers are conservatively engineered to insure quality and dependability. The most advanced techniques and years of high voltage experience go into every unit, from the smallest AC Hipots to heavy units rated up to 500 kv, in excess of 3000KVA. Using Hipotronics' own transformers, corona free performance to full rating is guaranteed.

All units are designed for maximum operator and equipment protection. The surge devices preclude injury to any component from repeated short circuits at full output and the many safety devices insure operator protection.

FEATURES

- **Continuously adjustable output control from zero to maximum.**
- **Continuously adjustable electronic thyratron operated overload — prevents excessive burning of cable or insulation when failure occurs.**
- **Back-up magnetic overload circuit breaker.**
- **Triple range output connected KV meter, 4½" square, 2% accuracy.**
- **Single range current meter in grounded HV return.**
- **Circuit breaker input.**
- **HV on and off pushbuttons.**
- **Zero start interlock — compels operator to always raise voltage from zero.**
- **External interlock provision.**
- **Main, HV on and failure pilot lights.**
- **Surge and transient protection on all meters, transformers etc.**
- **Corona-free to full output.**
- **Meets ASTM, IPCEA, MIL, UL etc. specifications.**
- **Less than 5% waveform distortion on all models.**

OPTIONAL EXTRAS

Corona Detection Equipment: Any AC or AC/DC units may be supplied with Hipotronics' own advanced corona detector as part of an integrated system. See catalog sheet for features and prices of Hipotronics Corona System.

Motorized output control, single speed

Motorized output control with 10 to 1 range of adjustment

Burn Feature — bypasses overload and inserts line reactor in series with HV transformer's primary.

Multi-pi secondary — increases secondary current capability x4 at ¼ output, x2 at ½ output, thus increasing test capacity. Price depends on unit.

DA OUTPUT CHANNEL for 1.3 or 2.6 times AC rating with current capability of 10 ma.

HV on Dwell timer — allows operator to preset maximum HV on time

Memory KV — maintains KV meter reading at breakdown value on motorized units

Floor model cabinet with clear plastic 2 foot door

Caster mounted HV section

Test Jigs — Any ASTM jig — ¼" dia., 2" dia., oil cup, ¼" x4, etc.

SPECIFICATIONS

Hipotronics will provide more complete details including prices, sizes, weights, input voltage, and delivery time on a particular unit. While size and configuration of units depends on KV and KVA rating as well as optional extras that might be required, the following is an approximation.

Up to 25 KV Units generally air-insulated and in one cabinet.

Over 25 KV High voltage section hermetically sealed in oil.

100 KVA and up Consists of slope front desk type control console, voltage regulator section, and an oil tank containing the HV transformer, meter multiplier and power separation filter for corona testing if desired.

Over 200 KVA Normally as other units above 100 KVA, with a fourth section containing the main circuit breaker and contactor.

SERIES RESONANT

Hipotronics Inc., recommends the use of Series Resonant Dielectric test sets for very high KVA capacitive load testing. Write for details.

MODEL NUMBER AND ORDERING INFORMATION

Hipotronics uses this system. AC Insulation testers are preceded by the number "7". The next number or numbers is the KV rating, the number after the hyphen is the KVA rating, i.e.

715-5 is a 15 KV @ 5 KVA AC unit
7150-500 is a 150 KV @ 500 KVA AC unit

When DC outputs are available they are indicated with numbers following the AC designation, i.e.

715-1/20 is a 15 KV @ 1 KVA AC tester with 20 KV DC available.

Corona testers are indicated by the letters CT following the number designation, i.e. **750-2CT**

When requesting further information or quotation, please include complete details of your requirements and any special restrictions that might be applicable. If you are not sure which units best suit your needs, describe the tests to be performed, including capacitance of the load (i.e. rating and length of cable), test standards used IPCEA, NEMA, etc.

CUSTOM DESIGN

Hipotronics can provide start-to-finish fabrication of AC Dielectric Test Sets to exact specifications. Any reasonable KV-KVA combination throughout design ranges can be provided; i.e., 45 KV @ 225 KVA.

HIPOTRONICS INC.

DC INSULATION TESTERS

Hipotronics DC Insulation Testers are specifically designed for insulation testing with sufficient current capacity to charge high capacitive loads.

All units are designed for maximum equipment and operator protection. The surge devices preclude injury to any component from repeated short circuits at full output, and the many safety features insure operator protection.

An instantaneous overload relay turns the HV off and the internal shorting relay discharges the sample under test immediately after failure.

All units are ruggedly constructed for plant or field use and are designed for long life trouble free operation. Every unit is shorted many times at full output before shipping to insure the effective operation of all surge devices.

SAFETY FEATURES

- Output shorting relay with discharge resistor, gravity operated.
- Instantaneous adjustable overload relay in grounded return.
- Instantaneous overload circuit breaker in primary of HV transformer.
- Zero start interlock – compels operator to always raise voltage from zero.
- External interlock provision for test cage door or "dead man" switch.
- Surge limiting resistor in HV output.
- Shielded output cable or bushing.
- Three wire grounding type cord and plug on 115 volt units.
- 115 volt control circuitry in 220 volt models.

CONVENIENCE FEATURES

- Solid state rectifiers
- Triple range output connected KV meter with recalibration facilities
- Triple range current meter in grounded return
- HV on and off push buttons with HV on pilot light
- Continuously adjustable output control
- Hermetic sealed oil filled HV section on all models 30 KV and up
- 4½" square Weston meters with 2% accuracies

CORONA DETECTORS

All Hipotronics AC, DC, or AC/DC Insulation test sets are corona free to full rating and can be supplied with Hipotronics advanced Corona Detector Oscilloscope to provide a complete and integrated corona test system. These systems meet or exceed testing requirements as specified by ASTM, IPCEA, MIL-C-17D and MIL-T-27. Request a complete quotation to fill your requirements.

NON-DESTRUCTIVE HIPOT & INSULATION TESTERS

100 Series
NON-DESTRUCTIVE HIPOT AND INSULATION TESTERS

Model HD 115

The Hipotronics line of non-destructive AC/DC hipot test sets utilize a thyratron-operated overload circuit for unprecedented reliability and speed of operation. Reaction time is remarkably low, sensitivity is variable over a range of 1 to 110% of rated output current. With circuit sensitivity set at maximum, corona discharge or leakage currents of sufficient magnitude will trip the HV before insulation failure occurs.

Each unit is packaged on a rack mounted panel installed in a new, attractive desk-top cabinet. The unit may be removed from the cabinet and mounted to a standard equipment 19" rack in minutes. Controls have been human engineered to provide ease of operation, safety, readability, and an attractive, professional appearance.

Two versions are available: a standard unit with minimal control features, and a deluxe unit with all the most desired controls for laboratory precision testing programs.

FEATURES IN STANDARD MODEL:

• AC input on and off switches • Input fuse and pilot light • Output control continuously adjustable from zero to maximum • Single range, output connected KV meter, 2% full scale accuracy, 3½" arc • Single range current meter in grounded HV return. 2% full scale accuracy, 3½" arc, 0-5 ma AC/DC • Meters are recessed for protection • KV meter recalibration facility • Continuously adjustable, overload circuit from 50 ua to 5 ma • Failure indicator and reset button • Front panel, re-entrant output jacks with shielded HV output lead and ground lead • AC/DC meter switch with reminder lights over output jacks • External interlock provision • Surge limiting resistor in DC output • Deluxe, 21"W x 19"D x 10"H cabinet (slightly larger for 25 KV unit)

ADDITIONAL FEATURES IN DELUXE (HD) MODELS:

• Zero start interlock with HV on and off buttons—compels operator to start test at zero volts • Triple range KV meter • Triple range DC current meter, 0-50/500/5000 ua DC • High Voltage On pilot light

OPTIONAL EXTRAS (ALL UNITS):

- HV test probe $10
- Gravity operated output shorting solenoid with discharge resistor $35
- Audible failure signal $15

SPECIFICATIONS:

Input	115 VAC, 60 Hz, 5 amps max.
Size & Weight	21"W x 19"D x 10"H; appx. 60 lbs.
Output Current	5 ma. AC or DC at full rated voltage
Meters	2% full scale accuracy, 3½" arc

Model	Output Voltage	KV Meter Ranges	Price
H 103	0-2.5 KV AC/0-3 KV DC	0-3 KV AC/DC	$270
HD 103	0-2.5 KV AC/0-3 KV DC	0-.6/1.2/3 KV AC/DC	340

AC and DC PRODUCTION HIPOT TESTERS
A and B Series

Model HD B12

Designed for use by unskilled or semi-skilled personnel in mass testing of electrical components, transformers and appliances. Simple to operate, reliable for go no/go testing. Indicators provide information on component leakage and internal arcing. Continuously variable output voltage and output connected KV meter provide optimum test accuracy at lowest cost.

FEATURES:

• Detachable test leads enter front panel • Continuously adjustable output from zero to maximum • Output connected KV meter for maximum accuracy • "Arcing" detector employs corona pickup network for best sensitivity • "Leakage" detector sensitivity continuously adjustable from 500 ua to 5 ma • Three-wire grounding cord and plug • Shielded output lead thru re-entrant jack • AC input switch, fuse, and pilot light • Each model has a corresponding deluxe model with an audible failure alarm circuit incorporated in its design.

OPTIONAL:

HV probe $10

SPECIFICATIONS:

Size & Weight	7"H x 12"W x 8"D; appx. 20 lbs.
Input	115 VAC, 60 Hz, 3 amps max.
Short Circuit Current	
AC Units	18 ma.
DC Units	5 ma.
KV Meter	3% full scale accuracy, 3" arc

AC Models	Output	Price
H A3	3 KV AC	$145
HD A3	3 KV AC	170
H A5	5 KV AC	160

HIPOT TESTERS & MEGOHMMETERS

300 Series
AC/DC HIPOT TESTERS AND MEGOHMMETERS

Model H 306B

The 300 series of Hipot Testers and Megohmmeters are voltage test sets which perform three different functions. They may be used for AC dielectric/insulation tests, DC dielectric/insulation tests, and insulation/resistance tests. The "A" units perform IR tests to 1000 megohms and the "B" units to 100,000 megohms at 500 volts. Megohms at any other voltage may be determined from the volt and current meter readings.

New design package is human engineered for easy operation, flexibility, and safety, and is available in two series:

A SERIES: Four current ranges
Two resistance ranges
Reads currents as low as 1 ua
Measures megohms to 1,000

B SERIES: Current amplifier permits reading as low as 0.01 ua
as high as 100,000 megohms
Six current ranges
Four resistance ranges

FEATURES:

- Overload circuit has continuously adjustable sensitivity from 50 ua to 5 ma. Maximum sensitivity allows non-destructive testing of insulation and dielectrics.
- Reset button and failure indicator.
- Unit is mounted in an attractive, dust-proof, bench-top cabinet. May be removed from cabinet and mounted on a standard equipment rack.
- Dual range output connected KV meter, with set point for megging clearly marked.
- Range and function switches.
- Front panel test lead connections, with AC and DC output reminder lights.
- Input on and off switches, pilot light, and fuse.
- Recalibration facilities.

SPECIFICATIONS:

Input	115 VAC, 60 Hz, 1 amp max.
Size & Weight	21"W x 19"D x 10"H; appx. 50 lbs.
Meters	2% full scale accuracy, 3½" arc
Current meter ranges:	
A Series	0-50/500/5000 ua DC; 5 ma AC/ 1-100 megohms, x1, x10
B Series	0-.5/5/50/500/5000 ua DC; 5 ma. AC/ 1-100 megohms, x1, x10, x100, x1000

Model	Output Voltage (KV) AC	Output Voltage (KV) DC	Output Current	Megohm Ranges	Price

MEGOHMMETERS

Model H M3AS

Hipotronics megohmmeters are precision instruments for use in production or laboratory testing of cables, capacitors, printed circuits, transformers, electronic assemblies, etc.

- The output voltages are both regulated with a ferro-resonant line and a solid state electronic regulator. Even with large capacitive loads on the 20 million range, there is no bounce.
- The indicating device is a high quality Weston with better than 2% accuracies on all ranges below 1 million and 3% on 10 million. The VTVM circuit driving the meter on the higher range models has no zero shift on any range.
- The short circuit protection is such that the output may be continuously shorted without injury to any component.
- Self contained calibrating resistors in the seven range models permit the operator to periodically verify the calibration.
- A three terminal output network (positive, negative and guard) permits grounded or ungrounded tests to be made.
- Dual color scale on multiple output voltage models improves readability.
- The units also contain a resistor and switch position for discharging both the internal and load capacitance.
- Available in 6 models, all with 115 Volt, 60 Hz input and AC input switch, fuse and pilot light.
- Two models have mandatory 2-hand operation.

Model	Output Voltage	Range	Price
H M1	500	1-100 megohms (X1, X10)	$170
H M3A/3AS (H M3AS has mandatory two-hand operation)	50	1-100 megohms ($X.1/1/10/10^2/10^3/10^4$)	$315/$340
	100	2-200 megohms ($X.1/1/10/10^2/10^3/10^4$)	
	500	1-100 megohms ($X1/10/10^2/10^3/10^4/10^5$)	
	1000	2-200 megohms ($X1/10/10^2/10^3/10^4$)	
H M6B/6BS (H M6BS has mandatory two-hand operation)	50	1-100 megohms ($X.1/1/10/10^2/10^3/10^4$)	$255/$280
	250	5-500 megohms ($X.1/1/10/10^2/10^3/10^4/10^5$)	
	500	1-100 megohms ($X1/10/10^2/10^3/10^4/10^5$)	
M6C	250	1-100 megohms ($X.1/1/10/10^2/10^3/10^4$)	$250

MOVING MAGNET INDICATORS

MODEL No. 640, D.C. 2¼" Metal Case

Feature long scales, accuracy within 5%. Attractive appearance with sturdy movement; round or square cases at low cost. Standard finish on metal cases is black. Chrome Plate is available at slight additional cost. Many types of mounting arrangements available.

MODEL DC	CASE TYPE PANEL MTG.	SCALE LENGTH DC	FLANGE	BODY DIA. DC	BODY DEPTH DC

INCOR

WIDEBAND DC INSTRUMENTATION AMPLIFIERS

INCOR's Instrumentation Amplifiers are solid state devices containing their own regulated power supplies. Designed specifically to fulfill DC instrumentation requirements, each has the ability to drive all types of galvanometers, A to D converters, multiplexers, tape recorders and extremely long data lines.
Amplifiers provide low output impedance and frequency response from DC to 100 KHz. Up to ten amplifiers may be mounted in the INCOR Series 103 Rack Adapters, or supplied with individual cases for single channel bench operation.

STRAIN GAGE/TRANSDUCER POWER SUPPLIES

INCOR power supplies are designed specifically for low level DC instrumentation applications. They feature a high degree of guarded isolation from the power lines (0.1 picofarads) and ground (10,000 megohms minimum). Other features are high resolution 10 turn voltage control potentiometers, .01% time stability and .005% / °F temperature coefficient.
Up to 10 channels can be accommodated in the Model 103 rack, Fig. A.

RB-3	Same	4 point shunt calibration	Polarity switch Relay for remote or automatic calibration	80

Model 103B

RACK ADAPTERS AND CASES

The INCOR series adapters provide interchangeable mountings. The amplifier units plug in from the front with complete access to operating controls and test points. The rack adapter provides for AC power distribution and signal input (XLR-3-14) and output connectors (MS3102A) for operation in a recording system. Blank filler panels are provided for all unused positions. Rack size is 19″ x 3½″ x 18″ deep. Case 3″ x 1.7″ x 13″.

PHAZOR

The operation of the Phazors is unique in that the input and reference signals are applied to an electronic multiplier which derives the instantaneous product of their amplitudes. The multiplier output is then applied to a DC meter which produces a deflection proportional to the time average of this product.

Expressing this function mathematically we have: Meter Deflection = $\frac{k}{T}\int_0^T V_S \cdot V_R \, dt$

PHASE METERS

High Accuracy and Resolution • Measures 0°-360° Without Ambiguity • Rejects All Noise and Harmonics (without filters) • Wide Input Voltage and Frequency Range • Self Calibration Assures Accuracy

MODEL 200A

$505.00

APPLICATIONS: Measures phase shift in transformers, amplifiers, etc. • Readings not affected by noise and harmonics • Measures in-phase or quadrature voltage components • .01 degree can be measured employing special techniques.

SPECIFICATIONS

ACCURACY: ±2 degrees
FREQUENCY: 20 Hz to 20 KHz

MODEL 210AB

$840.00

This instrument retains the essential feature of other Phazor models in that accurate measurements can be made even though signals may be complicated by noise and harmonics. The quadrant is read directly on a projection readout. The angle within the quadrant is displayed on the meter.

SPECIFICATIONS

ACCURACY: ±2 degrees
FREQUENCY RANGE: 15 Hz—30 KHz
SENSITIVITY: 5 millivolts

VECTOR VOLTMETERS

Precise Measurement of:
IN-PHASE VOLTAGE • QUADRATURE VOLTAGE
TRUE RMS VOLTAGE • PHASE ANGLE
NULL VOLTAGE

MODEL 300PB

$1,200.00

- Portable — All Solid State
- Direct Reading Phase and Quadrant Indicator
- Battery Operated — Eliminates Power Line Ground Loops

SPECIFICATIONS

INPUT VOLTAGE: 1 MV—300 V
INPUT IMPEDANCE: 1 megohm
VOLTAGE ACCURACY: 2% full scale
PHASE ACCURACY: ±1 degree
FREQUENCY RANGE: 60 Hz—10 KHz
NULL SENSITIVITY: 10 microvolts
HARM. REJECTION: 40 db down without filters
WEIGHT: 9 lbs., approx., with batteries

AC Power Pack Available — $150.00

MODEL 300B

$1675.00

- Direct Reading Phase Angle
- Wide Frequency Range
- Rejection of Noise and Harmonics without Filters

SPECIFICATIONS

INPUT VOLTAGE: 1MV to 300 V
INPUT IMPEDANCE: 10 megohm
VOLTAGE ACCURACY: 2% Full Scale
PHASE ACCURACY: ±1 degree
FREQUENCY RANGE: 15 Hz to 30 KHz
REF. VOLTAGE: 5V to 220V
NULL SENSITIVITY: 10 Microvolts
HARM. REJECTION: 40 DB without filters
RACK PANEL SIZE: 19"Wx5¼"H

Powertron ELECTRONIC GENERATORS

Series 250S (Solid State)

$595.00
(Less Plug-In Osc.)

The Series 250S (illustrated above) and the Series 1000S Solid State supplies are designed to be used in modular form so that they may readily be stacked for 1Ø, 2Ø or 3Ø output power.

Fixed frequency and variable frequency plug-in oscillators are available for single phase, or poly-phase operation. The variable frequency oscillators are digitally set to three significant figures. They feature excellent stability and continuous resolution and are readily adaptable to remote programming.

A complete line of 1Ø, 2Ø & 3Ø models with power output ratings from 3 VA to 9 KVA and frequency accuracies to .0001%

These AC Power Supplies provide stable, low distortion AC power at frequencies within the audio frequency spectrum. The highly reliable and versatile power sources find wide application in calibration and test stations, motor drives, gyro wheel supplies, laboratory use, military component testing, and operating foreign equipment.

SPECIFICATIONS
(Series 250S Illustrated)

OUTPUT CIRCUIT: 1Ø, Isolated
OUTPUT POWER: 250 VA
POWER FACTOR: Unity ±0.7 (at full power)
OUTPUT VOLTAGE: Selectable — 0-130V RMS or 0-190V, 0-75V, 0-67V, 0-38V, 0-30V, and 0-17V
FREQUENCY RANGE: 45 Hz — 10 KHz full power; 20 Hz — 20 KHz derated
DISTORTION: 0.1% mid-band
REGULATION: 0.5%, 0—full load; 0.1%, for ±5% line
RESPONSE: 50 microseconds
HUM LEVEL: 80 db down
SHORT CIRCUIT PROTECTION: Output may be shorted indefinitely
THERMAL PROTECTION: Output transistors protected by thermal cutout
EXTERNAL AMPLIFIER INPUT: Available on rear
EXT. SYNC. INPUT: Available on rear
CONVENIENCE OUTLETS: Two switch-controlled outlets on rear
INPUT POWER: 115V or 230V, 50-60Hz (400 Hz avail.)

WRITE FOR COMPLETE POWERTRON CATALOGS

IMPEDANCE COMPARATORS

PRECISE, RELIABLE AND RAPID COMPARISON OF COMPONENTS

The circuit consists of a bridge, two arms of which are precision resistors matched to .01%. The two remaining arms are the standard and the component under test. Any voltage resulting from bridge unbalance is amplified and fed to a phase discriminator. The percentage deviation is read directly in both sign and magnitude on a meter.

FEATURES: High Accuracy & Stability • Fast Response • Linear Meter Scales • Self Calibrated

MODEL 60

$265.00

SPECIFICATIONS

FREQUENCY: 60 Hz
FULL SCALE RANGES: ±1%, 5%, 10%, 20%
IMPEDANCE LIMITS:
Resistance 5 ohms to 5 megohms
Capacitance 500 mmfd. to 500 mfd.
Inductance 15 milihy to 10,000 hy

MODEL 1010

$395.00

SPECIFICATIONS

FREQUENCY: Either 1 KHz or 10 KHz
FULL SCALE RANGES: ±5%, 10%, 20%
IMPEDANCE LIMITS:
Resistance 5 ohms to 5 megohms
Capacitance 50 mmfd. to 10 mfd.
Inductance 100 microhy to 100 hy

OTHER MODELS AVAILABLE } **MODEL 1000—1000 Hz—±1%, 5%, 10%—$395.00**
MODEL 1025—1KHz, 25 KHz—±5%, 10%, 20%—$455.00

MODEL 621 F NORMA FLUXMETER

Joining the widely used model 251F is the new, small and rugged model 621F fluxmeter. This accurate instrument, with a simple scale of 10^{-4} Webers (10,000 Maxwells)/Scale Division is expressly intended for the educational field. The economical price and liberal education discount makes its purchase for student use possible even with the limited budgets that exist in many science departments.

MODEL A GAUSSMETER

With prices starting at $185.00 (including probe) and a ten year history of performance and durability, the Model A Hall Effect Gaussmeter is the answer to many engineering, production and inspection requirements. The instrument includes a built-in magnet standard and can be supplied with axial probes to a diameter of 0.125 inches and transverse probes to a thickness of 0.006 inches.

MODEL D GAUSSMETER

The model D Gaussmeter provides a digital (3½ digit) display for exceptional readability and high resolution. As a highly stable laboratory instrument the model D Gaussmeter is available with a wide selection of probes including special units for operation at 4.2°K or 200°C.

MODEL 251F NORMA FLUXMETER

The model 251F is a highly sensitive, versatile fluxmeter for laboratory and production use. The instrument provides ten ranges covering 5×10^{-6} to 5×10^{-3} Webers (500 to 500,000 Maxwells)/Scale Division. Search coils, carrying/storage cases, etc. are also available.

SERIES 50 TEN MHz FUNCTION GENERATORS

NEW FROM INTERSTATE!

F51

F52

F53

F54

F55

From Interstate Electronics Corporation, a new series of highly reliable function generators providing a broad variety of functions as a universal signal source. Starting with the versatile, low cost F51 select the exact model for your needs.

F51 PORTABLE FUNCTION GENERATOR
Basic unit of the IEC Series 50

Frequency Range: 0.0005 Hz to 10 MHz. **Waveforms:** Sine, square, triangle, plus and minus ramp, plus and minus fixed width pulse, plus and minus variable width pulse waveforms and sync. **Output** adjustable up to 15v peak to peak into a 50 ohm load. Adjustable as well as fixed offset and VCG capability.

ALL IEC FUNCTION GENERATORS OFFER THESE FEATURES:

1. Broad Frequency Range — 0.0005 Hz to 10 MHz
2. Variable Width Pulse — provides variable pulse width in addition to the standard assortment of function generator outputs: sine, square, triangle, ramp, and fixed duty cycle pulse.
3. VCG — analog voltage control operating frequency
4. PWM — analog voltage control of pulse duty cycle
5. Sync signal output
6. Low Operating Costs . . . designed-in maintainability and reliability.
7. Voltage Offset — fixed offsets to provide all-positive or all-negative waveforms as well as continuously variable offset.
8. Sync Input — allows the function generator to be synchronized with another signal source.

CHECK THIS TABLE FOR SPECIFIC FEATURES OF EACH MODEL

MODELS	F51	F52	F53	F54	F55
Variable Offset — independent of output signal level	X	X	X	X	X
Calibrated Attenuator — with 70 db range		X	X	X	X
Triggered Output — one complete output cycle for each trigger input		X	X	X	X
Gated Output — continuous output when gate input signal is present. Variable gate threshold voltage. Gate accepts either polarity		X	X	X	X
Phase Lock — generator will lock and track any signal frequency within the selected 100:1 frequency range			X		X
Sweep — width variable to 100:1 repetition rate variable from 0.01 to 100,000 sweeps per sec.				X	X
Burst — uses internal sweep generator ramp to gate out a selectable number of Output Cycles				X	X

SERIES 50 FUNCTION GENERATORS OFFER THESE SPECIAL CAPABILITIES COMPARE!

Wider frequency range
Both variable and fixed width pulse waveforms. Simplified sweep width control for easier operation. Designed-in maintainability Model F55 offers both phase lock and sweep capability.

For complete technical information or demonstration call your IEC Field Engineer listed in the EEM Yellow Section or contact John Norburg at Dept. 7000E, Box 3117, Anaheim, Calif. 92803. Telephone (714) 772-2811. TWX 714-776-0280.

Jewell
Panel Instruments

Model MS Meters

Modern square-case design. Dials are uncluttered, easy to read, precisely marked. The sides of the cover are crystal-clear Plexiglas, like the front of the cover; this lets extra light in. In 20 standard colors.

Series 70 Meters

Simple, handsome design. Plexiglas cover. A serrated panel covers only the unusable parts of the dial. 2½-inch and 4½-inch models can be used with a metal bezel for mounting from behind the panel.

Model MM Meters

Distinctive medallion shape. Plexiglas cover and extra-long scale for maximum readability. Special wedge-shaped divisional markings and lance-type pointer. Choice of colors.

JULIE NEW DEVELOPMENTS—1970

ATS-106/20 AUTOMATED PRECISION MEASURING and DATA LOGGING SYSTEM

Prices are dependent upon application and begin at approximately $10,000 Refer to the current and voltage source section for Models AVS-106 and ACS-106 relay-operated precision sources. Also refer to the voltage divider section for the Model RVD series of relay operated dividers.

A significant advance has been made in universal interfacing of programmable inst mentation with the development of the new Julie ATS-106/20, which provides the mea for keeping up with today's increasingly sophisticated electrical test work load in t accuracy range of from 10% to 0.001% or better. This new system may be used with Julie programmable instruments and, in fact, any equipment using 10-line decimal BCD program format, and provides an immediate interface with any computer or oth data handling equipment equipped with a "Teletype" input/output channel. The Mo ATS-106/20 includes a modified Teletype keyboard, automatic paper tape punch a reader and specially designed digital logic cards to interface with the instrumentati and an external computer system.

It has four modes of operation:

1. Automatic Mode — The program tape made while operating in the Manual-Rec mode (see below) is placed on the reader. The system then goes through the programm measurement sequence and punches a new tape and prints out the new data along w the original data to show deviation.

2. Manual-Record — The user makes measurements manually in the conventional mann The results are printed by the Teletype and a paper tape is automatically punch storing the measurement data and the instrument settings. This tape will serve as program tape when the equipment is operated in the Automatic Mode.

3. Manual-Mode — The individual instruments may be operated manually, in the c ventional manner, via their front panel controls.

4. Computer Mode — The ATS-106/20 Teletype may be linked with a computer via dir wire or through a standard telephone coupling terminal. In this case, all data collect by the new JRL system will be simultaneously printed out at the keyboard and au matically transmitted to the computer for analysis. Conversely, the computer may used as a program source to direct the measurement sequence and control the vario instrument programs.

MODEL SCO-107 PORTABLE ABSOLUTE VOLTAGE STANDARD

The best voltage reference possible must meet two basic critical requirements —

1. Time performance; the three saturated cells used must have minimum output voltage change with time.

2. The enclosure must maintain its nominal temperature with time.

Our Model SCO-107 provides both of these requirements as shown in the table.

	Oven	Cells
Time Performance	1 PPM/Year guaranteed	.005°C/year guaranteed
Temperature Performance	64 PPM/°C	.001°C/day guaranteed

Other features include a.) Proportionally controlled oven. b.) Small size and light weight — it fits under the seat of an airplane. c.) Has rechargeable internal batteries that allow it to be transported while on heating power. d.) It is NBS certifiable. e.) **Price: $1390.**

DVD-108J 8 DIAL PRECISION DOUBLE K-V DIVIDER

Provides the means for comparison accuracies betwe two voltages, currents, resistances, etc., of up to .01 pp It also features — 1) Ultra stable Julie resistors t allow a guarantee of 1 ppm accuracy for 5 years and ppm for 1 year, without adjustment. 2) A trim feat with .01 ppm resolution that eliminates long term fr tional PPM ratio errors.

See voltage divider table in Ratiometric Systems section for details. **Price: $35**

MODEL VS-127S ULTRA STABLE VOLTAGE SOURCE

Features: • Stability: 1 ppm/1000 hours • Output voltage: ±12 volts • Out current: 35 ma • Accuracy: ±.5 ppm (after calibration) • Resolution: 0.1 p • System includes divider (1 ppm for 5 years) and null detector (11 uv sen tivity) so that it can be used as a precision 0 to ±12 volt potentiome **Price: $4550**

DV-1000B PRECISION VOLT BOX

10 ppm Accuracy for up to 1000 volts.

Also features: • Voltage taps at 1000/300/100/30/10/3/1 volts
• Small size, only 8" h x 10½" w x 7" d. **Low Price: $6**

MODEL DVP-108J 8 DIAL PRECISION DOUBLE POTENTIOMETER SYSTEM

The most accurate potentiometer available —voltage comparisons are, in effect, simultaneous and yet accomplished on a single set of divider resistors.

Range	Dialable Resolution	System Accuracy
0 to ±12 v	100 nv	0.5 PPM of reading +0.05 uv
0 to ±1.2 v	10 nv	0.5 PPM of reading +0.05 uv
0 to ±.12 v	1 nv	0.75 PPM of reading +0.01 uv
0 to ±.012 v	.1 nv*	1 PPM of reading +0.005 uv
0 to ±.0012 v	.01 nv*	2 PPM of reading +0.001 uv

Price: $6550 (includes ND-106/7 Null Detector)

GTX-332 AND GTX-335 VOLT-A-VIDER

A compact dialable precision voltage source at an economical price

Features: • 0.0025% or 0.005% accuracy, as ordered • ±0.001% stability
• 1 volt & 10 volt output with 6-dial resolution
• 25 ma maximum output current • Remote sensing

Prices: GTX-332 (.0025%) **$895** **GTX-335** (.005%) **$795**

UPB-100 UNIVERSAL POTENTIOMETER/BRIDGE (STUDENT KIT)

A durable and economical potentiometer/bridge syst designed for use in the college classroom as well as industry.

The basic unit consists of five items:

1. Precision Attenuator/Universal Galvanometer
2. Precision Resistance Standards (5 values) Ratio Netwo (1000:100:10:1)
3. K/N Ratio Standards (12 Resistors)
4. Potentiometer Linear Circuit Adaptor
5. Resistance Bridge Linear Circuit Adaptor

The basic system is used to measure voltage, resistance, current, and ratio a is priced at $732. A 10% educational discount is available, where applicab to produce a net price of **$658.80.**

For added convenience, optional accessories are available. These include Lead Kit (**$22**), a specially written instruction book for theory, experiments, a answers (**$15**), a Student Manual (**$1**), a Binary Series Resistor Set (16 Bin Bits) (**$55**) and a Binary Coded Decimal Resistor Set (5 decade) (**$66.**).

TDV-1000 SERIES DIFFERENTIAL VOLTMETERS

Provide rapid voltage measurements with lab-standard accuracies.

DC accuracies up to ±0.0025% and AC accuracies up to ±0.05% are standard. The Julie design includes a solid state chopper (in the detector/amplifier circuits) that never needs replacement, modular circuit construction that allows critical circuits to be unplugged for rapid emergency replacement (ie: plug-in encapsulated zener reference voltage. Julie Model ZVR-512, plug-in converter etc., etc.), and high quality Julie resistor components that reduce periodic readjustments by 80 percent compared with competitors models. Resistance to extreme environmental conditions includes operation from 4°C to 40°C, from 0 to 10,000 feet altitude at from 0 to 90% R.H.

All models that operate on battery power (rechargeable) also operate on 115v/230v. 50 to 440 Hz line power. **Dimensions:** 7" L x 8½" W x 14¾" D.

Model	DC%	AC%	Line	Bat.	Input Impedance Inf. to ±11v and 10 Meg above 11v DC (AC see below)	Price

TDV-1000/2AB	.02	.2	Yes	Yes	1 Meg, 40 Pf.	$108

JULIE RATIOMETRIC® SYSTEMS

odern Julie systems make older conventional approaches obsolete. They are arkedly superior both electrically and mechanically.

frequency measurements, very accurate reference crystals are used to set ecific frequency points and then plugin units are used to both interpolate tween and extrapolate from these values so that frequencies of all values can produced and measured accurately. The only additional significant errors oduced are those from the interpolating and extrapolating devices. Similarly, the Julie approach, use is made of very accurate resistance and voltage ref- ences. A voltage divider is used with associated circuitry, switches and a null tector, to interpolate and extrapolate the values of these references. Total easurement errors are reduced, very simply, to those produced by the voltage vider (usually 1 ppm f.s. at worst), switching and hook-up (usually 1 or 2 ppm) d reference voltage or resistance (1 ppm for voltage and 1 ppm to typically) ppm for resistance).

e key to the RatiometricTM approach is the stable Kelvin-Varley voltage vider. (See the table that follows.) Although the Kelvin-Varley divider was vented over 100 years ago, it was not used in high precision applications cause of accuracy limitations. With the radical improvement in the accuracy the Kelvin-Varley divider by Loebe Julie, founder of Julie Research Labora- ries, Inc., the previously unrealized advantages of this divider were harnessed. ckground information is available for the asking from the Julie Research home fice in New York City.

cluded in the sections of this catalog that follow are the various measuring stems and sources that incorporate the Julie Kelvin-Varley divider. In general, e required null detector will be the Julie Model ND-106. Where more sensi- vity is required, the ND-107 preamplifier is also specified.

e section immediately following describes the null detectors and dividers that e compatible with the Julie systems. These units may be considered as basic ilding blocks onto which plugin adaptors are added for specific measurement rameters of voltage, current, resistance and ratio. For example, a particular stem could consist of an ND-106 null detector and a VDR-307 divider, mounted

Multivider cabinet with null detector and voltage divider

in a carrying case (as shown) and then either a potentiometer plugin (such as Model PVP-1000C) or a resistance bridge plugin (such as PRB-205C) could be mounted in the space provided. The size of the space provided is standard and the plugin modules can be interchanged in a matter of minutes. A laboratory can be supplied with one basic null detector/divider unit and several plugins, to save the repeated cost of the null detector and divider.

Other arrangements are available. Some typical systems are shown in the illustrations.

NGINEERING DATA AND ASSISTANCE

Ratiometric systems may be assembled for special purposes from the basic Multi-Vider units and the many specific plug-ins. Special plug-ins can be designed for special applications. Automatic systems and data logging are our specialties.

The exclusive JRL instrumentation console shown here contains, on the right, a complete RATIOMETRIC DC standards laboratory, and, on the left, a complete wide-range DC current source, assembled from basic RATIOMETRIC instrument modules.

The complete JRL portable standards laboratory — the most popular form of RATIOMETRIC facility — is shown here mounted on a portable cart, which also carries a primary standard emf reference in oven, SCO-106.

PRECISION RESISTANCE AND VOLTAGE MEASURING SYSTEMS AND PRECISION VOLTAGE AND CURRENT SOURCES

PRECISION RESISTANCE MEASURING SYSTEMS

Through the use of the RESISTANCE PLUG-INS, the multivider system is made into various precision resistance measuring systems.

When the PRB-205C bridge and range extenders PRB-205L and PRB-205H are used with the basic multivider detector and divider, the system is identified as the PRB-205S, and is capable of measuring resistance values from 0 to 10^{12} ohms. Zero offset circuitry establishes the true zero point and eliminates all test lead and fixture effects. Direct reading deviation dials permit measurement of deviation from 0 to ±1200 PPM in 0.1 PPM steps, with an accuracy of 0.1% of observed deviation or 0.2 PPM, whichever is larger. Resistance measurement accuracies obtained are tabulated below. All required resistance standards with NBS traceability are included. Model PRB-205C Plug-in includes Model MRS-106 Reference Resistorset, and the PRB-205L includes Model MRS-105 Reference Resistor set. See specifications in the resistance reference section.

When the Model DRRS-108 plug-in is used, the Multivider system is made into a Direct Reading Ratio Set, capable of measuring the Thomas pattern 1 ohm resistor with an accuracy and precision of .1 PPM. It also permits making 1:1, 1:9 and 1:10 comparisons of 2 and 4 terminal standard resistors.

See also the Model UPB-100 Potentiometer/Bridge in the NEW PRODUCTS SECTION.

MODEL PRB-205C

MODEL PRB-205H

MODEL PRB-205L

Range	*Accuracy	*Accuracy With Self-Calibration
Model PRB-205C, Price $2120.00		
0-1000 ohm	±.0001% of setting ±.0001% f.s.	±.0001% of setting ±.00001% f.s.

0-100 ohms	±.0001% of setting ±.0001% f.s.	±.0001% of setting ±.00001% f.s.
Model PRB-205H, Price $990.00		
100 Megohms	±.004% ±.0001% f.s.	
1,000 Megohms	±.009% ±.0001% f.s.	
10,000 Megohms	±.019% ±.0001% f.s.	
100,000 Megohms	±.04% ±.0001% f.s.	

*Absolute accuracy of measurement is equal to the absolute accuracy of the resistance standard used plus the accuracy of the bridge as shown above.

DIRECT READING RATIO SET PLUG-IN DRRS-108

- Low impedance permits use with nanovolt null detector
- Simple automatic calibration with self-contained 1:1 STD.
- Use with .001 ohm to 10 meg resistors

Price (DRRS-108) only **$1480.00**

PRECISION VOLTAGE MEASURING SYSTEMS

Through the use of POTENTIOMETER PLUG-INS, the Multivider system is mad into various precision voltage measuring systems.

When Plug-ins such as the PVP-110C potentiometer or PVP-1000C potentiometer voltbox or PCVP-1000C potentiometer/current shunt, or PVP-1001J universa potentiometers are used with the basic multivider detector and divider, th systems are identified as PVP-110S potentiometer, PVP-1000S potentiometer voltbox, PCVP-1000S potentiometer/current shunt and PVP-1001JS, respectively potentiometers using larger dividers such as the VDR-106/7 and DPV-108J ar described separately. The voltage plug-ins have integrally mounted mercur cells for excitation current. The systems described herein are all complete except that an external voltage reference (such as Julie Model SCO-106 o SCO-107) are required. Other voltage plug-ins not pictured are:

PVP-110C potentiometer plug-in, same as PVP-1000C, except with only a singl range of 0-1 VDC. PRICE: **$1275.00**

PVCP-1000C potentiometer/current shunt plug-in is the same as the PVP-110 except that it includes compatible shunts for measuring current from 0-1 amperes. PRICE: **$1725.00**

ALSO SEE THE WIDE LINE OF JULIE DIFFERENTIAL VOLTMETERS LISTED IN TH NEW PRODUCTS SECTION for measurement of voltage to ±0.0025% accurac and the Models NVS-1103A and NVS-503A potentiometer/source system f ±.04% accuracy in the Voltage Sources Section, and the Model UPB-10 Potentiometer/Bridge in the New Products Section.

See New Products Section for .01 PPM potentiometer Model DPV-108J.

MODEL PVP-1000S (Model PVP-1000C Plug-in Potentiometer/voltbox) PRICE: $3850.00 (AS SHOWN)

Range	Accuracy
0 to 1 vdc	0.0004% ±1 digit 0.0002% ±1 digit*
3 vdc	0.0009% ±1 digit
10 vdc	0.0009% ±1 digit
30 vdc	0.0014% ±1 digit
100 vdc	0.0014% ±1 digit
300 vdc	0.0014% ±1 digit
1000 vdc	0.0014% ±1 digit
0.1 to 1.1 vdc (std. cell comparator)	±1 microvolt

* With self-calibration

NANOVOLT POTENTIOMETER

MODEL PVP-1001J PLUG-IN PRICE: $2175.00

Range	Accuracy Direct Reading	Accuracy With Correction
0 - 12 volts	.0005% ±1 μvolt	.0001% ±.1 μvolt
0 - 1.2 volts (standard cell comparison)	.0003% ±1 μvolt	.0001% ±.1 μvolt
0 - ±.12 volts	.0005% ±.1 μvolt	.0002% ±.02 μvolt
0 - ±.012 volts	.0008% ±.01 μvolt	.0003% ±.3 nanovolts
0 - ±.0012 volts	.0013% ±.001 μvolt	.0004% ±.1 nanovolts

NOTE: Complete PVP-1001JS System includes the PVP-1001J Plug-in, VDR-327J Ov ranging Divider, ND-106/7 Null Detector, and ND-107 Preamplifier: PRICE $4880.

DC VOLTAGE AND CURRENT SOURCES

Julie precision voltage and current sources are the most accurate and most stable available. Many standard models are available as tabulated below. The Julie Engineering team is always pleased to design special configurations when special applications demand custom units. In general, highest quality precision sources are comprised of a stable voltage reference (such as ZVR-512), a 100K Kelvin-Varley divider (such as VDR-307H) for output control, and an ultra stable, low noise operational amplifier (such as OA-600 Series). All three basic modules are available from Julie and can be assembled as required.

Model	Output and Output Resolution	Accuracy of Output	Stability Brief Specs.	Pr
DVS-106 Precision Voltage Source	0 to ±12, 120, 1200v at 0-35 ma. 7 digits	2 PPM of setting +0.5 PPM of range after calibration	7 PPM	$37
DCS-105 Precision Current Source	0 to ±1.2, 12, 120 ma and 0 to ±1.2, 12 amps with ±10v compliance. 7 digits	1.2, 12, 120 ma: 10 PPM 1.2, 12 amps: 25 PPM after calibration	1.2, 12, 120 ma: 15 PPM/wk. 1.2, 12 amps: 25 PPM/wk.	$37

JULIE VOLTAGE AND RESISTANCE REFERENCES (STANDARDS)

VOLTAGE REFERENCES

SATURATED STANDARD CELL OVENS

SCO-106 Primary standard voltage reference provides the highest accuracy and stability obtainable. This is derived from 3 saturated standard cells in a temperature stabilized enclosure which affords two orders of magnitude better accuracy than unsaturated cells customarily used for laboratory work. The SCO-106 is transportable under oven heat, thus eliminating the need for lengthy restabilization.

		Temperature	Time
SCO-106	Cells	64 ppm/yr.	.01°C/day max.
	Oven	1 ppm/yr. max.	.05°C/yr. max.
SCO-107		See New Products section	

PRICE: $1390.00

SOLID STATE REFERENCES — ZENERS

lie ovenized zener voltage ref-ences are second in stability and curacy only to ovenized saturated lls.

e zener reference is superior pri-rily in that it is not damaged en shorted, is less affected by mperature variations and is much ss expensive. Unlike cells, the ner can be adjusted to deliver wer to a specific load such as a ltage divider. This feature is ex-emely valuable to instrumentation stems manufacturers. Non-oven-d versions with extremely low mperature coefficients, and bat-ry-powered types are also available.

RESISTANCE REFERENCES

Julie evanohm resistors are acknowledged to be the most stable precision types available anywhere. For the ultimate in convenience and reliability these resistors are made available in a variety of packages and configurations. The most pampered are the NB-1's mounted in the PRO series ovenized enclosures. These resistors exhibit an observed drift (as low as 1 ppm in several years) which is much less than any other resistors available.

Other models are designed for maximum convenience in size and portability. Others are used when it is also important to be able to transfer values to different decade levels.

Refer also to the resistor chart in the resistor section. Individual data sheets are available for all Julie standard resistors.

Model	Absolute Resistance Values (ohms) and max. initial deviation from absolute in PPM	Stability Per Year (PPM)	Room Temp. Effect (PPM)	Size	Price

JULIE OPAMPS, SYNCHRO/RESOLVER BRIDGES, AC STANDARDS, DECADE RESISTOR BOXES, HIGH VOLTAGE DIVIDERS, VOLT BOXES, AND CURRENT SHUNTS

OPAMPS

Julie self-powered OA series operational amplifiers are uniquely drift free and ultra-low in noise content. Specially designed for high precision DC applications, these amplifiers feature input stability of 100 nanovolts and typical gains from 10^6 (120db) to 10^8 (160db).
Julie precision resistors, references, dividers and amplifiers can easily be assembled into high precision generators and sources in a wide range of output configurations.

Output Power Capability	Price
OA-601, ±10 ma, zero to 1000 ohms load	$ 800.
OA-602, ±40 ma, zero to 750 ohms load	$ 860.
OA-603, ±10 amps, zero to 1 ohm load	$1880.
OA-604, ±1,200 volts, 35 ma capability	$1980.
OA-605, ±150 volts, 50 ma capability	$1450.

PRECISION CURRENT SHUNTS

High quality shunts are high quality 4-termin resistors especially designed to operate relatively higher current levels without suffe ing appreciable resistance change. In order maintain a constant resistance, these resisto are mounted in oil or in air-finned heat sinks that the internal temperature rise is kept to minimum. Internal heating is negligible at cu rents up to that specified as rated.

Most high ranges (50 Amps for example) are t finned heat-sink type. Most lower ranges a available in both single and multiple-range unit Accuracies of up to .0025% are availabl although most applications only require acc racies in the order of .05% or .01%. Typic stabilities are .01%/year and temperatu coefficients are 5 PPM/°C or better.

Further details are available in data she CS-106, available upon request.

AC/DC THERMAL VOLTAGE TRANSFER STANDARD

The JRL Model TRS-105 Thermal Transfer Standard is designed to provide rapid and simple referencing of any AC voltage up to 1,024 vrms to known DC voltages with a basic accuracy of .001% without the use of calibration curves or correction tables and with excellent thermal stability and DC reversal error. Voltage Ranges: 1, 2, 4, 8, 16, 32, 64, 128, 256, 512, 1,024 vrms with each range useful from .5 to 1 times its maximum.

Price: $1500

Frequency	To 64 V	128 to 512 V	1,024 V
5 Hz through 10 KHz	.001%	.002%	.003%
10 KHz through 20 KHz	.002%	.003%	.005%
20 KHz through 50 KHz	.003%	.004%	.01%
50 KHz through 100 KHz	.02%	.1%	.2%
100 KHz through 1 MHz	.1% up to 10 V.		

Thermocouple Reversal Error: Zero ±2 PPM adjustable from front panel.
Input Impedance: 100 ohms/volt.

PRECISION DECADE RESISTOR BOXES

MODEL DR-100 SERIES. Accuracy: 0.02% of setting ± 1 milliohm

This is a modern two concentric-dial version the familiar inline 6-dial decade boxes found most Engineering, Q.C. and Production area Resistance at zero setting is 15 milliohms a repeatability at any setting is typically 1 mil ohm. Inquire about accuracies of .01%, .005 and .0025%.

Model	DR-114	DR-115	DR-116	DR-117
Total Resistance	11.1K	111K	1.11 meg.	11.1 meg.
Price	$210.	$210.	$210.	$260.

HIGH VOLTAGE MEASUREMENTS

The Julie High Voltage Dividers and Volt Boxes on the table below are used to "drop" high voltages to a level that traditional precision potentiometers and high impedance electronic voltmeters can safely measure (such as the Julie models PVP-1000S, PVP-1001JS, the DVD-108J and the TDV-1000).

Each unit contains the highest quality Julie primary standard resistors with the exception of the HV Series, where film resistors are used for highest possible input impedance, except where otherwise noted. Those HV models followed by a /w utilize the wirewound Julie resistors. All instruments listed are NBS-certifiable, self-calibrating and self-guarding.

KAY Sweep and Marker Generators

1500C
20 Hz-4 GHz

1500C: The model 1500C is a high performance solid-state sweep and marker system which accepts a variety of sweep and marker plug-ins to cover the frequency spectrum from 20 Hz to 4 GHz. The basic rack unit contains a variable sawtooth sweep generator, a fast-acting AGC, birdie and pulse marker controls, and RF output circuits including precision attenuators and built-in detector.

860H: The model 860H includes all of the features of the model 1500C with the exception of the frequency marking facility. It is intended for use where the frequency marking is obtained from an external source or counter.

SWEEP PLUG-INS for the 1500C an 860H systems feature: A group o highly stable, low residual audio ban modules; extremely flat wide band videc VHF and UHF plug-ins; and a new serie of low cost, high output, solid-stat microwave devices which extend th range of these systems to 4 GHz.

MARKER PLUG-INS for the 1500C in clude PCM7631, PCM7632, PCM763 and PCM932 pulse marker plug-ins PCM861 birdie marker plug-in and th new PCM7670 variable marker plug-in– all described on the following page.

Frequency Range	Model	Sweep Width	RF Output	FEATURES
20 Hz—200 KHz	PC-141A	0*—20 KHz	1.0V RMS Into 50 ohms	Ultra-stable, Narrow band plug-ins. Crystal-controlled beat-frequency oscillators provide 1.0 V rms output with excellent waveshape. Extremely low residual FM: <0.2 Hz. Drift: <3 Hz/min. Log or linear sweeps.
35 Hz—600 KHz	PC-142A	0*—40 KHz		
100 Hz—2 MHz	PC-130F	0*—2 MHz		Ultra-stable, narrow sweep plug-ins; wide sweeps to 2 MHz. Residual FM: <4GHz. Drift: <30 Hz/min. Log or linear sweeps.
1 KHz—20 MHz	PC-152B	0*—20 MHz		Wide video sweep plug-in; sweeps from 20 MHz down to less than 1 KHz. Log or Lin sweeps. Spurious beats down more than 30 DB. Residual FM: <75Hz.
50 KHz—115 MHz	PC-154A	0*—100 MHz		Solid-state wide sweep plug-in; very flat output: ±.25 DB; harmonic and spurious distortions >30 DB down. Residual FM: <50Hz. Log and Linear sweeps.
1—175 MHz	PC-857A	0*—30%		Ultra stable, narrow band plug-in, very low residual FM.
2—220 MHz	PC-860F	0*—30%		Solid-state, fundamental frequency sweeps to 220 MHz; Twelve band direct reading dial; high output with excellent waveshape. Extremely low residual FM.
220—470 MHz	PC-867A	20 KHz—70 MHz	0.5V rms into 50Ω	Solid-state, VHF-UHF, fundamental frequency sweeps. Excellent waveshape.
Following Models Available for 1500-C, 860-H and 121-C Rack Systems				
100 MHz—1 GHz (Any octave)	PC-123A P-123A	0.2%—octave	0.5V rms into 50Ω	Solid-state octave sweeps to customer specifications. Excellent linearity over full octaves. Stable outputs.
.75—1.5 GHz	PC-120A P-120A	Nom. 0—Full octave	10 MW levelled 13 MW unlevelled	Completely solid-state octave-wide sweep plug-ins; high-level outputs. Quality not luxury prices; spurious distortion: >60 DB down, Harmonic distortion: >20 DB down.
1—2 GHz	PC-125A P-125A	Nom. 0—Full octave		
1.2—2.4 GHz	PC-126A P-126A	Nom. 0—Full octave	50 MW levelled 70 MW unlevelled	
1.5—3 GHz	PC-128A P-128A	Nom. 0—Full octave	15 MW levelled 18 MW unlevelled	
2—4 GHz	PC-127A P-127A	Nom. 0—Full octave	10 MW levelled 13 MW unlevelled	

* Residual

121C
500 KHz-4 GHz

121C: This solid-state instrument is an electronically swept wide sweep and marker generator which accepts a choice of UHF and microwave sweep plug-ins to provide extended frequency ranges and sweep widths. With its plug-ins, the 121C covers a range of 500 KHz—4 GHz, offers a new series of solid-state microwave sweeps featuring high output at low cost, and accepts a variety of narrow and wide-sweep plug-ins for speci applications such as UHF TV.

The basic 121C system includes va able sweep rates, external modulatio CW and manual operation, built-in atte uator and detector plus a fine digit frequency control for smooth center fr quency settings and remarkable adjus ment during narrow operation.

Frequency Range	Model	Sweep Width	RF Output	FEATURES
500 KHz—1050 MHz	P-121A	5 KHz—350 MHz	0.5V rms	Electronic, wide-sweep, stable narrow sweeps.
900—1300 MHz	P-122	200 KHz—400 MHz	0.5V rms	Electronic, wide-sweep, stable narrow sweeps.
1.3—1.7 GHz	P-124A	500 KHz—400 MHz	0.5V rms	Electronic, solid-state, wide sweep.
.75—4 GHz	Microwave Plug-in Models P120 thru P128 see table above

Marker Generators KAY

NEW MODEL 8323A FREQUENCY MARKER COUNTER PROVIDES VARIABLE PULSE MARKERS TO 7 SIGNIFICANT DIGITS

8323A: This all new ultra-state-of-the-art instrument teaches your "Old Dog" sweeper a "New Trick" — How to count! The 8323A works with any old dog or new VCO sweep to provide both a counter (DC-115MHz) and three independent, continuously variable pulse markers that can be read out individually to counter accuracy. Designed to facilitate precision passband marking and sweep and point setting, each frequency marker can be read out as desired with the flick of a switch. Marker height, width, and direction (horizontal for sharp slopes) are controlled on the front panel. A variable, horizontal line provides easy reference for amplitude calibration. Works with Kay sweeps or others.

■ Variable Marker Plug-Ins

PCM7631, PCM7632, PCM7633, PCM932 (1500C system), PM7650 (154C, 159D systems): These plug-ins are precision pulse marking systems which accept multiple, crystal-controlled, markers at customer specified frequencies. Each marker or marker group is controlled by a simple front panel switch. The individual pulse marker is sharp enough to remain narrow and well defined even on extremely narrow sweeps.

Model	Freq. Range	No. of Markers
PCM7632	1KHz—1MHz	6 + External Variable
PCM7631	10KHz—2MHz	6 + External Variable

PM7650	1MHz—110MHz	8 + External Variable

■ Pulse Marker Plug-Ins

PM100, PM300: These new plug-ins provide two, accurate, variable pulse markers for use with 154C and 159D sweep generators. Both models also include individually controlled 1 and 10MHz crystal marker arrays. The variable pulse markers thus may be used as calibrated end point markers and passband markers. Individual amplitude controls adust marker size up from the base line for accurate gain marking.

PM7670: The model PM7670 is a new fundamental frequency marker module which develops a direct-reading variable birdie marker for use with the Kay model 154C, 159D and 1500C sweep systems. It covers its 300KHz—300MHz spectrum in 8 individual calibrated bands. In addition to the variable marker, 1 and 10MHz harmonic markers and a CW output are provided. An optional 4.5MHz crystal sideband marker may also be specified. For the model 1500C system, specify PCM7670.

■ Birdie Marker Plug-Ins

PCM861, PM7660: Designed for use with the 1500C and 154C and 159D respectively these plug-ins offer either individually switched single frequency and/or harmonic birdie-pip markers as specified. The PCM861 produces up to six markers in the 200KHz—1GHz region. The PM-7660 allows up to eight indicators in the 500KHz—300MHz range. All markers are held to .005% crystal accuracy. Variable level controls are included and an external CW signal can be injected to develop a variable birdie within the range.

154C - 159D: These up-to-the-minute versions of Kay's 154 and 159 are completely solid-state, electronically swept, wide-sweep and marker generators which cover their ranges in a single wide sweep. The additional features of continuously variable sweep width and multiturn digital frequency dial provide exceptional fine touch settings over the video, IF and VHF range. The use of a broad output amplifier in these beat frequency units permits light coupling of the mixed oscillators, thus providing high RF levels with superior waveshape; distortion and spurious are minimal.

Performance characteristics include line lock, CW, manual, wide variable sweep rates, and external modulation input. Frequency range may be swept from HI to LO or from LO to HI as required. Automatic leveling may be controlled either externally or internally. A built-in detector and precision sweep attenuator are standard features. Both models are available in 50 or 75Ω impedance. In addition, a full compliment of pulse, birdie, and variable marker plug-ins are available for use with these instruments. These modules are described above.

159D

Freq. Range	Model No.	Sweep Width	RF Output	Flatness	Markers	Features
50 KHz-110 MHz	154C	5 KHz-100 MHz	1.0 V., 50Ω metered	±0.25 db	PM7650 pulse markers PM7660 birdie markers PM7670 variable birdie markers PM100 dual variable pulse markers	Solid-state, wide sweep: plug-in marker system. Sweeps full 110MHz to low end 50KHz. Pulse and harmonic markers. Sweep rates .01—1000Hz.
300 KHz-300 MHz	159D	20 KHz-300 MHz	1.0V., 50Ω metered		PM7650, PM7670 PM7660, as above PM300 dual variable pulse markers See descriptions above.	Similar to 154C solid-state sweep and marker system. Very flat, very low harmonics and spurious. Now with full 1 volt RMS output.

KAY Sweep Synthesizers

101A

101A: The model 101A is a sweep synthesizer which provides not only the solid-state 100 MHz wide sweep capability of Kay's proven 154C (see above) but also superb, low residual, narrow sweep features essential for steep-skirted, narrow band filter applications and for the design and production of pin-point frequency discriminating circuits. In addition it provides a new order of swept and cw stability, of narrow-band frequency marking, of calibrated (0.01%) cw output frequencies, and of digital/analog programmability through the use of newly developed IC synthesizer circuitry. The price at around $3000 for a unit that includes a "locked" range of 100 KHz to 100 MHz is a fraction of the cost of the usual synthesizers.

KAY PRODUCTION SWEEPS FOR RADIO, TV, ETC.

1484 BP

- **Push-Button Sweep and Marker Selection.**
- **Application Oriented, Sweep and Marker Units.**

1483B: The new 1483B is a solid-state sweep and marker generator used to design, test, and align UHF-TV receivers, it develops a full 0.5 volt rms output into load over the entire channel 14 to 83 frequency range. A front panel control permits switching of the sweep width from a wide 520 MHz (entire UHF-TV band) to continuously variable widths from 60 down to 5 MHz.

- **Easy to Use, Lower Cost Excellent for Production.**

1484BP: New, compact units for production type applications feature push-button band switching of both sweeper and marker outputs. Markers are pulse or birdie pip, sweeps are ALC'd flat and linear, standard models at FM IF, FM RF, VHF TV frequencies. Frequencies to 1GHz to order. Excellent narrow sweep units feature level controls free from frequency pulling. Wide sweeps to an octave at all frequencies and wider as many (e.g. 40 — 230MHz single sweep TV), low cost, repeatable, stable.

Model No.	Frequency Range	Markers	Features
1483B	440-960MHz	Up to 8 single frequency or 7 harmonic birdie	UHF channels 14-83
1484BP	10.7MHz	Band selected pulse markers or single freq and harmonic birdies	Push-button sweep and marker selection for fast production line testing
1484BP	88-108MHz		
1484BP 1484BP	40-230MHz Selectable to 1GHz	Single frequency or harmonic birdies	Customer specified bands

KAY TELEMETRY L & S BAND GENERATOR

1522A

- **Programmable Carrier Frequency, IRIG Channel and RF Attenuation.**

A new FM signal Generator for the telemetry L and S bands uses phase-lock techniques to provide superior stability and accuracy; and digital control of RF frequency, set up for remote operation or BCD programmability. Remote operation (or programmability) is also provided for RF output and IRIG channel selection.

The new generator, model 1522, is a solid state unit with peak FM deviations of up to ±3 MHz modulated on a self-contained, calibrated deviation meter. Internal modulation for each of the 21 standard IRIG subcarrier frequencies is provided. Calibrated RF output is adjustable from 0 dbm to —120 dbm.

Settability: 100 KHz, digital control

Accuracy: ±.002%, calibrated after one half hour warm-up.

Stability: Drift plus incidental FM less than ±2 KHz pk for 1 minute, less than ±5.0 KHz pk for 10 minutes, less than ±15 KHz for one hour.

(Residual FM: <1.5 KHz on L Band <2.0 KHz on S Band)

KAY AUTOMATIC NOISE FIGURE METER

792A

- TUNED IF INPUT AMPLIFIER (NO SPURIOUS READINGS
- BROAD 10-1000 MHz SOURCE (NO CHANGING SOURCE IN MID-BAND)
- OPTIMIZED IN PRICE AND PERFORMANCE FOR 10-1000 MHz RANGE
- NOISE MEASUREMENTS TO 26.5 GHz
- 75Ω MEASUREMENTS FOR CATV COVERAGE

The 792A is a sensitive, solid-state, noise figure meter. Primarily focused on the frequency range below 1000 MHz, this instrument provides better accuracy and greater flexibility at considerably less cost than conventional noise generators. The 7921A hot wire noise source is a unique broad band generator and operates over the full 10-1000 MHz range.

Provision is made for later addition of noise sources covering the range to 26.5 GHz. In this way, an expanded applications requirement can be met without the full expense or added space demands of an additional unit.

Additional noise sources provide variable impedance and balanced VHF outputs from temperature-limited diodes, waveguide output from argon gas tubes Either 6 db or 15.2 db excess noise outputs can be selected for increased accuracy at low or high noise figures, respectively.

This wide coverage eliminates the inconvenience (and the inaccuracies) of changing noise generator source in mid-band, as is usually required.

INPUT FREQUENCY: 10-120 MHz Continuous Coverage

BANDWIDTH: Approx. 4% of Center Frequency

INPUT SENSITIVITY: 0 to 75 dbm (noise source on). Approx. 35 db gain required between lowest noise source & input.

INPUT IMPEDANCE: 50 ohms nominal

INPUT ATTENUATOR: Steps of 20, 10, 5, 3, 2, and 1 db.

KAY RANDOM NOISE GENERATORS

10, 403, 780: These models are calibrated random noise sources providing output over a wide frequency and power range. They employ noise diodes with tungsten filaments as temperature-limited noise generators. The plate voltage of the noise diode is regulated and the diode plate current, (proportional to noise power output), is variable by a front panel control. A calibrated meter provides direct reading in noise figure. The ability to vary the noise output in an accurately known way, greatly simplifies the measurement process since it permits precise matching of circuit noise rather than a more complicated referencing back to some fixed output.

Model	Frequency	Features
240	5-220MHz	0-23.8DB Noise Figure
403	3-500MHz	0-19DB Noise Figure
780	1-3GHz	0-20DB Noise Figure

AMPLIFIERS KAY

1022A, 1022A PF, 1023A, 1024A, 1026A: These amplifiers include new wide-band models with excellent gain-bandwidth characteristics, (40 db - 150 MHz, 30 db 300 MHz), and a high output 8 MHz unit delivering 15 volts rms into 50 ohms. Each of these amplifiers has unusually flat response over its full frequency range. Each is designed for accurate input and output impedances of 50 ohms, but can operate an accessory probe to provide amplification from high-impedance outputs without loading down the test signals.

For high impedance application, the 965A broad-band probe is designed for operation with these 50 ohm input amplifiers.

1025B: The 1025B gives overall response, and at the same time gives detailed, easily seen measurements of points on the curves as far down as 80 db. The unit permits highly accurate viewing of the skirts and sharp slopes of bandpass filters, single side-band filters, traps, etc. A control gives expansion of the top critical points simultaneously with the log display. 80 db log range, also available as undetected RF signal.

1025B

Model No.	Frequency Range	Output Voltage	Gain	Response	Features
1022A	50KHz—8MHz	15VRMS	34DB	±.25DB	High, Flat Output
1022APF	10KHz—110MHz	5VRMS	30DB	±.5DB	Wideband, High Output for distribution systems
1023A	1KHz—150MHz	.5VRMS	40DB	±.5DB to 100MHz ±1DB to 150MHz	40DB Gain, Compact Built-in Attenuator
1024A	200Hz—300MHz	.5VRMS	30DB	±.5DB: 1KHz—300MHz ±3DB: 200Hz—300MHz	Wideband Low Noise 75Ω for CATV
1026A	100KHz—300MHz	3VRMS	20DB	±.5DB	Wideband, High Flat Output

CATV TEST INSTRUMENTS

Kay offers a complete line of CATV test instruments. We have often supplied the model 159D sweeper with PM7670 vari-marker plug-in, 1024A amplifier, 792A automatic noise figure meter, attenuators, and 255B coaxial electronic switch at 75Ω for CATV testing.

159D

5070B

PULSED RF GENERATOR

The 5070-B is a solid-state instrument whose pulsed output features sharp rise and decay and flat tops. The unit will serve as a CW generator, as well as a video pulse generator. It provides a stable CW signal from 10 MHz to 120MHz, continuously variable, in five overlapping bands. Carrier off level — 85DB.

OTHER MODELS AVAILABLE
The Model 5071-A offers a wider frequency range of 10-250 MHz. The Model 5072-A expands the standard 5070-B to provide carrier-off levels of up to 95 db.

Kay in-line and rotary attenuators are designed to provide a means of inserting an accurate and fixed amount of loss in circuits operating in the DC-12.4 GHz range. Attenuation is controlled by field-proven high-frequency toggle switches. Solid silver contacts set in Teflon for low loss and superior match are employed throughout. The precision resistors used are 1% tolerance, carbon film resistors. The maximum total error is very low and incidental insertion loss is negligible. These units have met rigid environmental tests and are traceable to N.B.S.

The individually-switched steps are isolated in broad-tuned, shielded compartments, providing high accuracy and a flat frequency response over the specified range. All models are symmetrical, (bi-directional), attenuators. Most models are available in either 50, 75, or 90 ohms.

To afford maximum utility, Kay in-line attenuators are available for your special built-in applications. These attenuators are ideally suited for inclusion in a wide variety of equipment, such as test equipment, IF amplifiers, receivers, etc. In general, the electrical specifications are the same as for the in-line model. They differ, however, in mechanical configuration.

PROGRAMMABLE

A new series of programmable attenuators has been introduced to provide precise increments of fixed attenuation which may be switched from a remote position or be controlled by programmed opens and shorts on a 9 wire control system.

These models feature programmed values of attenuation in the DC-12.4 GHz region. Utilizing Kay's proven in-line models, these devices incorporate a new light-weight, low-cost control package that includes a low-level SCR network

TTENUATORS

cilitating use in large test systems here a low current drain is essential. A rotary control arrangement is avail- ble for remote sequential control of tenuator levels.

30B — DC - 1300 MHz
0-135 db in 1 db steps

61A — DC - 4 GHz
0-132 db in 1 db steps

24A — DC - 6 GHz
0-90 db in 10 db steps

COAXIAL ATTENUATORS

A new group of switched, coaxial attenuators is now available to span the DC - 12.4 GHz range. Developed from Kay's precision VHF - UHF attenuators, these devices eliminate the cumbersome technique of inserting and reinserting individual pads or the need to go thru a time-consuming rotary step-cycle.

Individual attenuation steps are controlled by finger operated, spring-loaded slide switches. These models consist of a complete coaxial system. Each segment is constructed with air dielectrics, and fine silver contacts insuring precision surfaces. Individual steps are isolated in broad-tuned, shielded compartments.

A variety of models is available to provide customer specified attenuation and frequency ranges covering the 0 - 132 db — DC-12.4 GHz range. Standard models are listed on the attenuator chart; many attenuators in this series are available in single coaxial pads, two or three step versions or special versions to suit customer specifications.

kikusui ELECTRONIC MEASURING INSTRUMENTS

MODEL 555 OSCILLOSCOPE

Vertical Amplifier
Sensitivity ..... 0.02V/cm~10V/cm in 9 Steps
Calibration Accuracy
..... ± 3% (at correct mains voltage)
Bandwidth (−3dB approx) ..... DC to 7MHz
Rise Time 50nS
Input Impedance 1MΩ, 33pF
Time Base
Sweep Range ..... 1μS/cm to 1S/cm in 19 Steps
Accuracy ..... ± 5% (at correct mains voltage)
Expanded Sweep ..... 5 times ± 5% accuracy (at correct mains voltage)
External Sweep
Deflection Sensitivity ... 1Vp-p/cm. 200mVp-p/cm using 5 times magnifier. 200mV to 10V/cm adjustable continously in conjunction with AMPLITUDE control.
Frequency Response (−3dB) ..... 2Hz to 200kHz
Synchronization
Synchronous System ... Self-excited trigger sweep
Synchronous Signal ..... Internal, external, mains frequency
Calibration
Output Wave-form ... 1kHz square wave (approx)
Dimentions ..... 205W × 295H × 450Dmm
Net Weight ..... Approx. 11Kg

MODEL 553 OSCILLOSCOPE (DUAL TRACE)

Vertical Axis
Calibrated Deflection Factor
..... 10mV/cm~20V/cm, accuracy ± 3%, 1-2-5 Sequence, 11 position
Bandwidth ... For DC connection, DC ~7MHz, within −3dB
For AC connection, 2Hz~7MHz, within −3dB
Input Impedance ..... 1MΩ paralleld by 38pF
Rise time ..... Approx. 50nS
Time-Base
Sweep time ..... 1μ S/cm~1S/cm in 19 calibrated steps. 1-2-5 Sequence
Time Base Sweep Accuracy ..... ± 5%
Sweep Magnifier ..... × 5, accuracy ± 5%
Synchronization
Synchronizing System ... Trigger sweep and self-oscillating sweep
Horizontal Axis
Sensitivity ... Approx. 1Vp-p/cm; approx. 0.2Vp-p /cm in case sweep magnifier is actuated
Bandwidth ..... 2Hz~200kHz, within −3dB
Input Impedance ..... Approx. 1MΩ paralleled by less than 40pF
Calibrator
Output Waveform ..... Squarewave of 1kHz
Dimensions ..... 206W × 295H × 460Dmm
Net Weight ..... Approx. 11kg

MODEL 573 ALIGNMENT SCOPE

This type is an X-Y oscilloscope to be used in combination with a sweep generator for direct-viewing the frequency response of measuring instruments.

Vertical Axis
Sensitivity ..... More than 1mVp-p/cm
Voltage Dividing Accuracy ..... Within ± 0.5dB
Frequency Response ..... AC Less than −3dB at 2Hz to 200kHz
DC Less than −3dB at 0 to 200kHz
Input Impedance ..... Approx. 1MΩ, 50 ± 2pF parallel capacitance,
Input Terminal ..... BNC-type receptacle
Horizontal Axis
Sensitivity ..... More than 10mVp-p/cm
Frequency Response ..... AC Less than −3dB at 2Hz to 200kHz
DC Less than −3dB at 0 to 200kHz
Intensity Modulation
System ..... Z-axis intensity modulation
Sensitivity ... Sufficient modulation obtained with 1Vp-p signal
Frequency Response ..... Less than −3dB at 400kHz

MODEL 455 FUNCTION GENERATOR

Ultra-low frequency oscillator which divides sine wave, triangular wave, ramp wave and square wave from 0.005Hz~100KHz into 7 ranges based on the decimal system and generates them. Transistors have been adopted for all the circuits of Model 455, resulting in compact design and light weight. The frequency characteristics of the oscillation output voltage is essentially flat for the reason of its principle. Almost no transient is caused when waveform and range are changed over. It starts oscillating immediately with newly given waveform. By means of the start switch located on the operation panel, sine wave, triangular wave and ramp wave can be oscillated from minus (−) electric potential and square wave, from plus (+) electric potential respectively optionally. For this reason, this is a very convenient unit when measurement is made in ultra-low frequency. This unit can be used for measurement on low pass characteristics of feedback amplifiers, test of servomechanism of automatic controllers and serve as function generator for analog computer as well as signal source for oscillation driver. This unit can be applied to various kinds of measurements and tests in a very wide range.
MODEL 455L
Oscillation frequency ..... 0.0005Hz~10kHz

MODEL 115 HIGH SENSITIVE DC VOLT AMMETER

High sensitive DC voltammeter designed for measuring small DC voltage and current and for using as a DC amplifier. This instrument consists of the stable amplifier of extremely less drift employing a DC-AC converter, and the measuring terminal is floated. Also, zero center type is adopted, so that simple and quick measurement is ensured without requiring attention to the polarity. The input resistance of each measuring voltage range is 11MΩ constant and the full scale is 1.5mV~500V. The current range is 0.15μA~50mA. They are divided into 12 ranges respectively in 1.5-5-15 step. As DC amplifier, this instrument enables to take out from the output terminal provided at the back side of the panel 1.5V output voltage to the input value of the full scale at each of the above voltage and current ranges.

MODEL 156A DIGITAL VOLTOHMMETER

DC voltage within a range from ± 0.000 to 1000 volts and resistance within a range from 0.000Ω to 30.00MΩ at high accuracy by the use of a pulse width conversion system of integration type. It has the following features:

- The dynamic range is wide, and measurement can be counted up to "3000" in four decimal digits without switching the range. When a voltage higher than "3000" preset is applied to the input, a lamp lights to indicate it.
- Compact and lightweight, the Model 156A requires a minimum bench space. Operating procedure is very simple.
- The measuring speed is as high as 10 samplings /sec. Polarity switching is automatic. Because of the memory circuit, indication has little flicker. The measuring accuracy is as high as ±(0.1%+1 digit) of the indicated value. The input resistance is 10 megohms for all measuring ranges. The input terminals are floated from the case.
- The circuitry does not involve any electromagnetic mechanical parts, but employs silicon transistors and integrated circuits to a great extent for high-reliability performance.

Larson CONTACTLESS METER CONTROLLERS

Where there is INDICATION, there is a need for CONTROL

4½"

Wide View

3½"

2½"

Features:

- Overall depth, ONLY 3.95"
- No moving wires — no failures
- Continuous indication beyond set point
- Fail-safe circuit
- Repeatability ¼%
- Relay contacts 10 Amps 115V
- Amplifier for 115V AC or 24V DC input

Space Saver

2½" and 3½"

This is exactly what the Larson Controller offers you. Our instruments are designed to indicate and control any electrical variable from:

5 μa up to 1000 μa, dc
1 ma to 1000 ma, dc or ac
5 mv to 1000 mv
1 amp to 1000 amps dc or ac
1 volt to 1000 volts dc or ac

The variety in models and ranges continues... AC Volts Rectifier, RF Amps, Watt meters, Expanded Scale and Temperature Controllers from 100°C to 3000°F plus the newest design which features a Temperature sensitivity of 60°C f.s. with Thermistor or Thermocouple output amplifier.

For your design, we have a selection of styling and sizes. The Wide Vue, available in 2.5", 3.5" and 4.5"; single or dual limits. Shadow box optional.

The Space Saver, in 2.5" and 3.5", for vertical or horizontal mounting; single or dual limits.

The method of operation is an optical system, consisting of a miniature light source with a life expectancy of 100,000 hours. Each set pointer is equipped with a photo-electric sensing device. The indicating pointer has a segment which actuates the sensing elements precisely at the control point. They will remain actuated anywhere beyond the set point.

Control is established by means of a transistorized electronic circuit. The transistor amplifier and load relay are continuously energized up to the control point. In the event of power or light failure, the fail-safe circuit will de-energize the relays.

In the Larson Meter Relays, we designed for you, **our** Customer, modern styling, incorporating components obtaining top reliability...to give **your** Customer the best in Quality.

Inkless Event Recorder

The Larson Model ROS instrument will continuously record the time, sequence and duration of as many as 30 different events on one chart. The record is made on electro-sensitive paper, by a stylus which marks only when current flows through the paper. The recording is instantaneous, accurate and permanent.

RESPONSE and **RESOLUTION.** The recorder can remain on stand-by for an unlimited length of time, yet be ready to respond within 1 Millisecond when a signal is applied. The instrument will record up to 60 pulses per second for each stylus. Response time of the styli is 1 Millisecond.

CHART SPEEDS. Are available for ½" per hour to 10" per second. Standard speeds are ½", 1", 2", 3", 4", 6", 8" and 10" per hour, minute or second.

DIMENSIONS
10¼" W, 12¾" H, 7" D.
WEIGHT 20 Lbs.

A new concept in
laboratory load simulation.

VARIABLE ELECTRONIC LOAD

- ☐ Instant dial-a-load control.
- ☐ Precision control to ± 10 milliamperes.
- ☐ Static and dynamic load simulation up to 100 watts.
- ☐ Front panel voltage and current readout.
- ☐ Lightweight, compact and portable.
- ☐ Available in rack or bench configuration.
- ☐ Programmable dynamic load.
- ☐ Rapid set up. No decade switching.
- ☐ No Calculations. One front panel control.

IMMEDIATE DELIVERY from stock

ELECTRICAL SPECIFICATIONS:
Power rating—100 watt maximum
Voltage rating—50 volts maximum
Current rating—20 ampere maximum

STATIC LOAD (VARIABLE):
DC current load adjusted by the front panel control 0-20 amperes.

DYNAMIC INPUT:
AC current load may be superimposed on DC current load at a ratio of one ampere peak-to-peak load current per one volt peak-to-peak of dynamic input. Modulated with sine wave, sawtooth, square wave or any non-symmetrical wave form, DC to 10 KHz.

POWER REQUIRED:
Four type "C" batteries (provided with unit).

BATTERY CONSERVATION:
VARIABLE ELECTRONIC LOAD unit automatically turns off when equipment under test is disconnected.

MECHANICAL SPECIFICATIONS:
Bench—4.5"H x 15"W x 10"D.
Rack—5.25"H x 19"W x 10.5"D.
Weight—12 pounds.

LogiMetrics audaciously introduces the world's most accurate RF signal generator with continuously viewable (non-ambiguous) display.

- **Unprecedented stability and resolution**
- **No separate counter or accessory equipment required**
- **A true combination of improved performance and reduction in cost!**

FOR GENERAL LAB USE

MODEL 920A

100 kHz to 80 MHz, ddc to ±0.006% (60 PPM) accuracy and resolution, with compatible stability. 3 Volts RMS into 50 ohms.

SPECIFICATIONS — MODEL 920A

FREQUENCY CHARACTERISTICS:

Accuracy: The total uncertainty in frequency determination is ±0.006% of full scale, (i.e. ±60 PPM of a 4-digit scale) on all ranges.

Stability: Drift is less than 20 PPM per 10 minute period.

External Frequency Shift: DC coupled frequency control, for phase locking or fine tuning.

Display: Four decimal digit visual display plus overrange.

AMPLITUDE MODULATION CHARACTERISTICS

Internal: 400 Hz and 1000 Hz (±5%). Continuously variable 0 to 95%.

External: DC to 20 kHz depending upon carrier frequency.

External Mod Input: 3 Volts RMS into 600 ohms.

Modulation linearity: Less than 1% distortion for 30% modulation and less than 3% distortion for 70% modulation.

RF OUTPUT CHARACTERISTICS

Voltage Level: Continuously adjustable from 0.1 uV to 3.0 Volts RMS into 50 ohm resistive load.

Power Level: Corresponding to CW or peak of modulated signal level range; −127 to +23 dBm.

Impedance: 50 ohms, SWR less than 1.05 on 0.3 volt attenuator range and below, less than 1.2 on higher ranges.

Output Levelling: Output Level variation with frequency change is less than ±½ dB.

Accuracy: Better than ±1.0 dB.

SPURIOUS SIGNALS

RF Harmonic Output: At least 30 dB below the carrier at output levels of 1 volt or below.

Spurious AM: Hum and noise sidebands are at least 70 dB below carrier down to thermal noise threshold of 50 ohm system.

Residual FM: Typically less than ±1 PPM.

Incidental FM With 30% AM: Less than ±1 PPM.

RFI and Leakage: Permits receiver sensitivity measurements to 0.1 uV.

PHYSICAL CHARACTERISTICS

Cabinet: 7¾″ H x 19¾″ W x 18″ D.

PRICE: $1,975.00.

FOR PRODUCTION TEST USE

MODEL 910A

100 kHz to 32 MHz, ddc to ±0.006% (60 PPM) accuracy and resolution, with compatible stability. Lowest-priced ddc design.

SPECIFICATIONS — MODEL 910A

FREQUENCY CHARACTERISTICS:

Display: Four decimal digit visual display plus overrange.

Accuracy: The total uncertainty in frequency determination is ±0.006% of full scale, (i.e. ±60 PPM of a 4-digit scale) on all ranges.

Stability: Drift is less than 20 PPM per 10 minute period.

AMPLITUDE MODULATION CHARACTERISTICS

Internal: 400 Hz and 1000 Hz (±5%). Continuously variable 0 to 95%.

Modulation Linearity: Less than 1% distortion for 30% modulation and less than 3% distortion for 70% modulation.

RF OUTPUT CHARACTERISTICS

Voltage Level: Continuously adjustable from 0.1 mV to 1.0 Volts RMS into 50 ohm resistive load.

Power Level: Corresponding to CW or peak of modulated signal level range; −65 to +13 dBm.

Impedance: 50 ohms, SWR less than 1.2 on all ranges.

Output Levelling: Output Level variation with frequency change is less than ±1 dB.

Accuracy: Output accuracy better than ±1.5 dB at any frequency.

SPURIOUS SIGNALS

RF Harmonic Output: At least 30 db below the carrier.

Spurious AM: Hum and noise sidebands are at least 70 db below carrier down to thermal noise threshold of 50 ohm system.

Residual FM: Typically less than ±1 PPM.

Incidental FM With 30% AM: Less than ±1 PPM.

RFI and Leakage: Permits receiver sensitivity measurements to 0.1 uV.

PHYSICAL CHARACTERISTICS

Cabinet: 7¾″ H x 19¾″ W x 18″ D.

PRICE: $1,475.00.

TEST EQUIPMENT by RADIOMETER COPENHAGEN

Audio Frequency

WVE ANALYZER, FRA3 — Frequency Cov-erge: 10 Hz to 60 kHz. Six Band widths: ±1, 6, 12, 25, 50 and 100 Hz. Sensitivity 30μV to 300V f.s. Distortion, noise and hum: in the order of —100 db. Recorder output. Internal BFO and Superposition Amplifier for Intermodulation Measurements.

DISTORTION METER, BKF6 — Ranges from 0.1 to 100% f.s. Sensitivity 100 mV to 3V f.s. True r.m.s. detection. High pass and low pass filters. Push button operation, low internal distortion, hum and noise.

WIDE RANGE SINE-SQUARE WAVE GENERATOR, RCO11 — 10 Hz to 1MHz in 5 ranges. Metered Outputs: Sine wave; 50Ω and 600Ω (0.1 mV to 1 Vrms-monitored) and direct at approx. 10Ω (0 to 5V) Square wave; 50Ω and 600Ω (0.1 mV to 1 peak to peak-monitored) 50 ns rise time.

VECTOR IMPEDANCE METER, GB11 — Accurate measurements of magnitude and phase angle of capacitive or inductive impedances from 1 ohm to 1.1 megohm. Frequency range 25 Hz to 1 MHz. Option for d-c polarization. Phase angle from 0 to ±90°.

Component

R-L-C METER, MM2 — Wide range, direct reading measurements of Resistance: 0.1Ω to 1MΩ, Inductance: 3 μH to 100 H., Capacitance: 3 pF to 5000 μF, five test frequencies from 160 Hz to 1.6 MHz., DC bias input to ±60V. Recorder output. Low voltage test signals from 160 Hz to 1.6 MHz.

R-L-C COMPONENT COMPARATOR, TRB11 — Manual or automatic comparison of magnitude and phase angle at 1 KHz. 10Ω to 10MΩ, 1 mH to 10 H., 200 pF to 20 μF. Magnitude Deviation: ±1.5 to 100% f.s. Phase angle deviation: ±.015 to 0.6 radian f.s. Shown with component jig KPH1 and Limit Sensor LMS1.

CAPACITANCE COMPARATOR, CMB12 — For manual or automatic check of capacitance directly or against a standard. 7 ranges from ±1 to ±1000 pF f.s. Test frequency 1 MHz. Ext. bias to ±60V.

COMPONENT LINEARITY TEST EQUIPMENT, CLT1 — Fast, nondestructive RELIABILITY TEST METHOD for detecting latent defects in resistors, capacitors and other components. May be used on laboratory basis or on-line for automatic check of up to 10 components per second. High sensitivity — Interference free. Impedance range: 0.01Ω to 100MΩ, 10kHz Test Signal.

Radio Frequency

AM/FM MODULATION METER, AFM2 — Frequency range: 5MHz to 1002MHz. AM: 3% to 100% f.s. FM: ±3kHz to ±300kHz. High sensitivity: 3mV to 10V input at 50Ω. Mod. Freq. Response: 10kHz to 200kHz. Automatic level control. L/R separation better than 46 d.b. Distortion less than 0.2%.

STEREO GENERATOR AND MODULATOR, SMG1 — Both Composite and RF Outputs (100MHz). Exceptionally stable stereo signal in accordance with FCC standards. SCA modulation with FM sub-carriers. Multiple Modulation Frequencies.

FM/AM SIGNAL GENERATOR, MS27 — Wide Range: 0.3 to 240MHz in 5 ranges. 0.5% accuracy with crystal calibration. Int. or ext. mod: to ±75kHz FM and 80% AM. Low distortion: ±50kHz incremental frequency for narrow band applications.

GALVONOMETER, MULTIMETER, GMV30 — High sensitivity measurements, Current: 30 pA to 300 μ A.f.s. Voltage: 1mV to 300 V.f.s. Resistance: 1 kΩ to 300 MΩ f.s. Battery operated; differential inputs.

Specifications subject to change without notice. Detailed literature and demonstrations available on request.

with

HIGH ABSOLUTE ACCURACY

SIX DIGIT RESOLUTION

HIGH SPEED PROGRAMMING

SWITCHES OPERATE AT 5K OHMS
No Switch Cleaning Required

Output Voltage

10 volt range: 10 microvolts to 9.99999 volts in 10 microvolt steps
100 volt range: 100 microvolts to 99.9999 volts in 100 microvolt steps

Output Current
0 to 50 ma for any setting on 10 or 100 volt range

Absolute Accuracy
10 volt range: ±(0.003% of setting +100 microvolts)
100 volt range: ±(0.005% of setting +1 millivolt)
From 20° to 30°C and for a ±10% line voltage variation

Stability 7 days
10 volt range: ±(0.001% of setting +30 microvolts)
100 volt range: ±(0.0013% of setting +300 microvolts)

Noise
10 volt range: less than 25 microvolts rms
100 volt range: less than 250 microvolts rms

ACCESSORIES

Remote Digital Readout
Operates with main unit in local or remote program mode.

Remote Programmer
Voltages or Frequencies may be preset on eight rows of manual switches. Any preset program may be selected by a front panel push button or a single contact closure. Remote programmers may be cascaded.

Programmable Attenuator
0 to 99 db in 1 db steps; DC to 60 MHz; may be controlled by front panel decade switch, remote BCD program or remote programmer accessory.

Harmonic Generator
Generates a comb of frequencies to 100 MHz precisely derived from the synthesizer.

100:1 Precision Divider
Provides a 0.1 volt range on Model 102 DC standard.

IRIG Programmers for Telemetry and FM Tape Systems
These devices generate BCD signals which program Model 201 Synthesizer to frequencies covering all telemetry channels (both constant bandwidth and proportional bandwidth). Other programmers set FM tape system center frequencies and 20 frequencies across the band in accord with IRIG standards.

60MHz, 2MHz, 100KHz and 1KHz

MODEL V ALL-ELECTRONIC D.C. HYSTERESIGRAPH

by Lowell Electronics Corporation

The Model V Electronic DC Hysteresigraph replaces several laboratory pieces of equipment used in the point by point method of generating hysteresis curves. Traditionally the H axis is obtained by employing batteries, ammeter, rheostat, ballistic galvanometer and a reversing switch.

The operator is faced with the compound problem of monitoring power supply drift and balancing a ballistic galvanometer while reading flux and current.

The Model V DC Hysteresigraph does all this automatically by plotting a continuous B-H curve.

Operator time is decreased to approximately 20 seconds per curve and an infinite number of points plotted. No important data is overlooked or missed. Both major and minor loops may be programmed at will.

Driving samples to zero flux is insured by automatic recycle control so that initial permeability curves may be plotted.

The Hysteresigraph automatically does the following:

- Draws the positive half of the loop.
- Reverses the field when the preselected value of magnetization is reached.
- Draws the negative half of the loop and reverses direction of the field again when the desired value is reached.
- Initiates another reversal of field and completes the positive half of the loop.
- Lifts the pen from the recorder and turns off the current source.

Other programs are possible by manipulating front panel controls.

E AXIS CONTROLS

tegrating Fluxmeter—search coil employed in a Miller Integrator Circuit

curacy—0.05% or better

ability—3% of display at ±100 Maxwell turns for one minute or better allows practical measurements as low as 10 Maxwell turns

nsitivity—Scaled by operator. Displays of 10 Maxwell Turns per inch readily obtainable

he Nanovolt integrator is also sold as a separate unit

put Impedance—essentially infinite

utput —5 to +5 volts at 5 ma

EMANENCE TEST SET

perator positions piece part in solenoid, presses button, activating rogrammed power supply, and withdraws piecepart at end of program signal and reads remanence flux on digital display.

agnetizing force up to 1000 Oersteds with flux sensitivities to 5 Maxwells.

pecial as well as stock fixtures available.

pecial magnetic system designed to your requirements.

H AXIS CONTROLS

Power Supply—Programmed −10 to +10 Amps, current regulated, 1 KW max, short circuit proof.

CONTROLS

Max current—Adjusts power supply output from 2 ma to 10 amps

Full scale amps—Meter scale selector

Magnetize rate control—Adjustable from 0 to 1 amp per second

Recorder Sensitivity—K factor control sets recorder to display 0 to 10^5 oersteds per division. Continuously variable with .1% calibrated multipliers

Forward-Reverse—Permits initial magnetization in positive or negative mode changes sweep direction without changing polarity

Size—Instrument is 30″ high x 60″ wide x 30″ deep in a steel frame desk. A handy storage drawer is supplied. The top is walnut grain formica

Recorder x-y type 11″ x 17″ display

MAGNETICS TEST FIXTURES

Typical one shown below—ask for information.

MODIFIED EPSTEIN FRAME

FEATURES

- **High Speed testing**
- **Quickly programmed**
- **Direct digital readings**
- **Gated power supplies**
- **Test results memory**
- **Twelve test positions**
- **Wide operating range**
- **Swing-out front panel for easy accessibility**
- **Removable PC card assemblies**
- **Provision for custom modification**
- **Sloping desk-type extension for operating facility**
- **Any combination or sequence of tests**

Description The Mastech transistor/diode test sets are high speed sequential limit testers which perform all of the common transistor and diode tests such as breakdown or reverse voltage, sustaining voltage, leakage or reverse current, saturation voltage, forward voltage, DC beta and small signal AC beta. All DC tests are made as pulse tests at low duty cycles whenever the operating current is programmed over ten milliamperes. All tests can be made in any desired combination or sequence. The standard models are programmed by means of thumbwheel digit switches.

The differences between the various standard models are the number of test positions, the direct readout mode of operation, the voltage and current range and the type selection programming. In addition special sets are available. These include sets designed for testing SCR's, UJT and FET transistors and other discrete semiconductor devices. Test sets can also be supplied with other types of programming devices such as card readers and core memory storage.

2610

2610 C

201

Models Available The two basic test sets are the Model 2610 and the Model 2900 each of which are twelve test position limit testers with a maximum voltage and current range of 300 volts and one ampere. The Model 2610 has the direct readout mode of operation whereas the Model 2900 does not. The voltage and current range can be extended on these two basic models to 600 volts and 10 amperes ("B" postscript) or 1000 volts and 20 amperes ("D" postscript). Each set can also be supplied with a type selection programming capability ("C" postscript) which is useful whenever a lot of devices are to be segregated into appropriate classifications according to the tests passed or failed. Test sets with six test positions (Model 2611 and 2911) and a single test position (Model 2901) are also available as standard sets. These standard sets are priced from $8,500 to $17,000 depending on the model selected.

NEW!
MODEL 201

Model 201 has been designed for low to moderate volume users of semiconductor devices for incoming test and inspection. This set is an economy version of the Model 2611 featuring the direct readout mode of operation, six test positions and a 250 volt, 1 ampere operating range. Model 201 performs all of the transistor and diode DC tests in any desired combination and sequence. Small signal AC beta is an optional test (Model 201A). Digit switch programming is used in the standard set but a card reader programmer can also be supplied. Model 201 is priced at $7,200.

Write or phone for additional information

MODEL 2809 DATA LINE ANALYZER — A self contained test set for assessment of overall distortion produced by communication links, it is useful for testing the suitability of voice band transmission systems and microwave links — for data transmission. Three types of measurement can be made, peak-to-average rating (PAR), frequency response and system noise level (a special circuit is incorporated to correct for the effects of phase intercept distortion.)

MODEL 2090B NOISE LOADING TEST SET — This new unit measures Noise Power Ratio directly in db and picowatts. A standardizing noise generator is built into the receiver to facilitate out of — band measurements. Band limiting and slot filters for all CCIR/CCITT and D.C.A. recommendations. Special frequencies to order.

INTERMODULATION AND BASEBAND TEST GEAR

ESCRIPTION	FREQUENCY	FEATURES
OISE LOADING TEST SET RANSISTORIZED 625-670-0146) N/GSM 161) odel 2090A	12KHz to 12.388MHz (i.e. up to 2700 channels)	Solid state unit has built-in standardizing noise source in receiver for gain setting, out-of-band testing, etc. Includes noise generator, receiver and a choice of many different filters. NPR measurements can be made up to 75 db.
OISE LOADING EST SET odel 2090B	12KHz to 12.360MHz	Designed to meet latest CCIR and CCITT requirements (Recommendation 399-1 Oslo 1966). Operation similar to model 2090A.
WELVE CHANNEL OISE GENERATOR 625-948-4724) odel TM7816	300Hz to 3400Hz	Generates twelve non-related channels of Gaussian noise from twelve separate solid state sources. Output: each channel 1mW in 600Ω balanced, 300Hz to 3400Hz. Attenuation to −32 dbm in 2 db steps. Spurious noise in OFF channel (all other channels ON) is less than 10 dba (−75 dbm FIA weighted).
ATA LINE NALYZER odel 2809		Used for testing data transmission lines and links; measures peak-to-average rating (PAR) frequency response and system noise level. Has correction for phase-intercept distortion.
WO-TONE SIGNAL OURCE odel 2005	20Hz to 20KHz	Two continuously variable solid state oscillators 0.1% harmonic distortion, intermodulation −80 db, hum −80 db, monitored 111 db attenuator with balanced and unbalanced outputs. Recommended for SMPTE and CCIF two-tone testing.
ELECTIVE VOLTMETER odel 2330 625-168-0955)	20Hz to 50KHz	3 db bandwidth 6Hz; rejection ratio 65 db at 40Hz off tune. Sensitivity 30μv to 300 volts full scale. BFO output tracked in frequency and flat to 0.1 db. Includes RF detector for AM demodulation.
OLID STATE ISTORTION FACTOR ETER odel 2331	20Hz to 20KHz Fundamental 20Hz to 100KHz Max. Bandwidth	All transistorized unit measures distortion factor 0.05% to 100% in seven ranges from 0.1% to 100% f.s.d. Noise measurement to 100% in similar ranges. Switch bandwidth 100KHz or 20KHz with filters to give HF cut above 20KHz, LF cut below 400Hz and CCIF weighting characteristics. Voltage measurement 20Hz to 100KHz in ten ranges between 1mv and 30v f.s.d.

RECEIVERS FM/AM/CW/SSB

DDYSTONE odel 850/4	10KHz to 600KHz	11 tube superheterodyne with top performance throughout VLF and LF bands. Three selectivities, 100Hz to 6KHz; 75 db image rejection. Has facility for eight xtal controlled spot frequencies.
DDYSTONE odel 958	10KHz to 30MHz	High stability AM/SSB receiver with FET front end. Drift cancelling loop above 1.6MHz gives stability better than 20Hz. Blocking and adjacent signal interference exceptionally low; front end protected against high voltage at antenna input.
DDYSTONE odel 990R	27MHz to 240MHz	All solid state four range single conversion receiver for AM/FM. Two bandwidths of 30KHz and 125KHz. Local oscillator may be xtal locked to any of 8 internal customer selected crystals.
DDYSTONE odel 990S	230MHz to 870MHz	Transistorized two range single conversion receiver for AM/FM. Bandwidth variable 6MHz an 1MHz. FM discriminator deviation to 250KHz.
NORAMIC SPLAY UNIT odel 961	50KHz to 60MHz	3 models (/A — 50KHz to 800KHz; /B — 500KHz to 36.5MHz; /C — 36MHz to 60MHz) can be used separately or in conjunction with Eddystone Receivers. Sensitivity: /A 10μv/cm; /B and /C 20μv/cm. Calibration markers and pen recorder output; log/lin display, variable sweep speed or manual.

SWEEP GENERATORS & OSCILLATORS

DESCRIPTION	FREQUENCY	FEATURES
VIDEO AND UHF SWEEPER Model 2361		Main sweep unit has internal rep. rate 0.01Hz to 100Hz with linear, semi log, CW, single shot and manual modes. TV field lock, blanking and phase shift controls and alternate trace separation.
VIDEO PLUG-IN Model 9692	25KHz to 30MHz	Sweep width variable 0 to 30MHz, detected system flatness +0.05 db harmonic and spurious 40 db down. 1MHz and 5MHz markers.
UHF PLUG-IN Model TM9693	1MHz to 300MHz	Sweep width variable 0 to 300MHz, flatness ±0.25 db, harmonic and spurious 40 db down, 1, 10 and 100MHz markers.
AF OSCILLATOR Model 2102M	3Hz to 30KHz	A solid state oscillator capable of delivering up to 10 volts into 600 ohms (20 volts open circuit). Has complete freedom from "amplitude bounce" when rapid frequency changes are made. Drift 0.02% per 15 minutes. Distortion 1%.
WIDE RANGE OSCILLATOR Model 2103	10Hz to 1MHz	Sine wave or square wave output 0 to 2.5 volts RMS continuously variable with 4 step attenuator. Sine wave distortion less than 0.5% 50Hz to 10KHz.
MICROWAVE OSCILLATOR Model 6058	7.0 to 12.5GHz	Direct digital readout of frequency, accuracy ±1% resettability ±0.1%. Output power 5mw. Internal square wave mod, external PIN diode.
GUNN DIODE OSCILLATOR Model 6061	8.0 to 10.5 GHz	Micrometer head tuning, 5mv output other types for system use available on request.

FM DEVIATION METERS

FM DEVIATION METER (6625-060-3320) Model 791D	4MHz to 1024MHz	Deviation ranges, ±5, ±25, ±75 and ±125KHz full scale. Accuracy 3%. Crystal standardized. Local oscillator can be xtal controlled for measuring deviations down to 10Hz.
FM DEVIATION/ AM MODULATION METER Model 2300	4MHz to 1000MHz to 2500MHz using ext. oscillator	Wide range, mod. freq. up to 200KHz; deviation ranges ±5, ±15, ±50, ±150, ±500KHz. Local oscillator can be xtal locked, external oscillator can be used. De-emphasis 50μsec. 75μsec. switch selected. FM accuracy ±3% for deviation up to ±500KHz f_m 30Hz to 150KHz. AM modulation two ranges 30% and 100% mod. freqs. 30Hz to 50KHz (carrier 4 to 350MHz).
WIDE BAND FM DEVIATION METER Model 2300/6	20MHz to 1000MHz to 2500MHz using ext. oscillator	Deviation Ranges: ±10, ±30, ±100, ±300, ±1000KHz. Accuracy better than 5%, crystal standardized, f_m 30Hz to 150KHz.

BRIDGES AND Q METERS

UNIVERSAL BRIDGE Model 1313A	1KHz and 10KHz 20Hz to 20KHz External	0.1μh to 110h, 0.1pf to 100μf, 0.003Ω to 110MΩ. Accuracy 0.1%. Built-in osc. and det. Direct reading; simplest possible operation. Uses adapter TM6113 for biasing inductors to 200ma.
PORTABLE UNIVERSAL BRIDGE Model 2700	1KHz internal 20Hz to 20KHz External	0.2μh to 110h, 0.5pf to 1100μf, 0.01Ω to 11MΩ. Accuracy 1%. Transistorized, simple. Measures incremental L, electrolytics & non-linear resistance using external bias supplies.
Q METER Model 1245A	1KHz to 300MHz	Q ranges 5 to 1000, △Q 25-0-25. Accuracy 5% to 100MHz, 20% to 300MHz. Calibrated capacitor 7.5 to 500pf, △C ranges ±1 and ±5pf. Extremely stable and easy to operate. Uses separate oscillators—see below. Dielectric and Series Loss Test Jigs available. Also HF & LF inductors.
POWER OSCILLATOR Model 1246	40KHz to 50MHz	For driving 1245A Q Meter, or 4v across 50Ω for general lab use.
POWER OSCILLATOR Model 1247	20MHz to 300MHz	For driving 1245A Q Meter, or 4v across 50Ω for general lab use.

TELEVISION TEST EQUIPMENT

SINE² PULSE AND BAR GENERATOR Model 2905/5		Sine² pulse and bar generator for 525 line systems includes monochrome pulse and bar T/2, T and 2T. Also 10T and 20T with color burst, color sine² pulse and bar and sub-carrier added to staircase or sawtooth. External sub-carrier may be used.
SINE² PULSE AND BAR GENERATOR Model 2905/9		For accurate K factor measurement provides T, 2T, 5T, 10T, and 20T sine² pulse 25μsec bar, adjustable luminance/chrominance amplitude and delay, color burst pedestal, asynchronous square wave, 0.05 volt 52μsec set up. Includes inverted sine² pulse for checking quadrature distortion.
LUMINANCE/CHROMINANCE GAIN & DELAY TEST SET Model TF2904/1		Measures gain and delay inequality with gain discrimination 0.5 db, delay discrimination 2 nanoseconds, visible display of misalignment with scope.
TV SIDEBAND ANALYZER Model TF2360	100KHz to 20MHz 30MHz to 90MHz 170MHz to 230MHz 470MHz to 960MHz	Provides a symmetrical or asymmetrical swept video signal for testing video amplifiers or transmitters using 625, 525 or 405 line systems, positive or negative modulation.
BLANKING AND SYNC MIXER Model TF2908		Reshapes blanking and sync pulses and mixes with video waveform (sine² pulse and bar, sweep, sawtooth, etc.). Permits sweep measurement with clamps or dc restoring circuits in normal operation. Output flat 0.2 db to 10MHz, 0.3 db to 20MHz.
GRAY SCALE GENERATOR Model 2909/1		For linearity measurements on color and monochrome systems. 5, 7 or 10 stai step or sawtooth with line sync. selectable every first, fourth or fifth line. Colo sub carrier can be added to steps. Features automatic switching between blaci and white levels. Contains line frequency xtal or may be triggered from externa VIT unit.

MODEL 2006 SOLID STATE PRECISION SIG. GEN. — All solid state unit in which each frequency range is covered by separate fundamental RF oscillator unit. Generators will accept any 4 of 5 available units. Features very low microphony 12KHz deviation under ½ G acceleration. Low noise pure spectrum typically 12Hz telephone weighted, 40Hz flat over entire range.

MODEL 6055 SOLID STATE SIG. SOURCE — All solid state microwave signal source operates on fundamentals 850MHz to 2150MHz with digital frequency readout. Unwanted harmonics are −25 db; spurious unrelated components −35 db. Resettability 0.1%; square wave AM. FM to special order.

FM/AM SIGNAL GENERATORS

SCRIPTION	FREQUENCY	FEATURES
M SIG. GEN. (525-900-1016) odel 144H/4	10KHz to 72 MHz	0.2μv to 2v ±0.5 db, 50Ω. Also max. direct output 2.75v, xtal check, 400KHz and 2MHz. Stability 0.002%/10 min. internal AM to 80% at 400Hz and 1KHz. Also external AM.
M/AM SIG. GEN. odel 2002AS	10KHz to 72 MHz	0.1μv to 1v ±1 db, fully solid state, AM variable to 100%, FM deviation ±1KHz to ±50KHz max. dependent upon range. Incremental frequency controls with discrimination of 0.025% of carrier frequency and direct readout in KHz. Xtal calibrator 1MHz, 100KHz, 10KHz. Drift less than 30 ppm/15 minutes after warm-up. External frequency shift permits phase mod. or phase locking. For specifications of TF2116 Synchronizer, see below.
EQ. CONTROL UNIT odel 2166		For use with Signal Generator 2002AS. Unit locks up the frequency to a crystal, internal or external, or another signal generator. Variable offset up to ±50KHz enables units to simulate SSB signal.
M/AM SIG. GEN. (525-913-7223) odel 995B/Series	200 KHz to 220 MHz	0.1μv to 100mv. Calibrated, △F. Step attenuator, Crystal standardized; extremely stable. Deviation ±600KHz on top bands. Has simultaneous FM & AM. Special high sensitivity external FM mod. position with frequency/phase response suitable for stereo modulation. Also available for narrow band working FM spurious less than 25Hz. Model 995B/5.
OBILE RADIO EST SET odel 2905	Low and High Band	Test set comprises an FM/AM Signal Generator covering low and high bands, FM/AM modulation meter with demodulated output, RF power meter terminated and through line with forward and reflected power, 1KHz audio oscillator and AF voltmeter.
M SIG. GEN. (625-929-4277) odel 1066B/1	10MHz to 470 MHz	0.1μv to 100mv. 50Ω, FM at 1KHz and 5KHz internal, deviation to ±100KHz, △F to ±100KHz, both meter monitored. Stability .0025% 10 min. Rack mounted available.
M SIG. GEN. (625-937-2801) odel 1066B/6	10MHz to 470 MHz	0.1μv to 100mv into 50Ω. FM modulation at 1KHz and 5KHz internal or 30Hz to 100KHz external. Deviations to 100KHz, 10MHz to 50 MHz, ±400KHz, 50MHz to 270MHz and ±300KHz. 270MHz to 470MHz. Modulation distortion 5% over telemetering band 215MHz to 265MHz, AM or FM less than 5% at max. deviation. Crystal calibrator gives check points at 1MHz and 10MHz.
OW NOISE M SIGNAL GENERATOR odel 2012	400MHz to 520MHz	Highly stable low noise unit for testing UHF narrow band mobile receivers. Rejection ratios exceeding 90 db at 20KHz from mid band can be measured. Output level 0.01μv to 100mv into 50 ohm. FM deviation variable to ±30KHz f_m 300Hz to 3KHz.
OLID STATE RECISION FM IGNAL GENERATOR odel 2006	4MHz to 1000MHz	Solid state precision FM unit accepts any 4 of 5 oscillators with bands 4 to 10MHz; 10 to 90MHz; 88 to 220MHz, 215 to 500MHz and 440 to 1000MHz. Stability 15ppm +1.5KHz per 15 minutes. Xtal calibrator, 10MHz, 1MHz, 100KHz. Output 0.1μv to 100mv into 50Ω. FM ±100KHz to ±300KHz max. dependent on frequency. Mod. frequencies 20Hz to 125KHz from internal tunable oscillator or external source.
OLID STATE SIG. OURCE odel 6055	850MHz to 2150MHz	Digital readout continuously tunable solid state microwave source. Scale accuracy 1%, residual FM 1ppm, harmonics 25 db down, output 30mW into 50Ω max. AM (square wave) 900Hz to 1.1KHz. FM model to special order.

SIGNAL GENERATORS

MODEL		FREQUENCY RANGE
65B	AM	75 kHz to 30 MHz
80	AM	2 MHz to 400 MHz
80-R	AM	5 MHz to 475 MHz
82	AM	20 Hz to 50 MHz
95	FM	50 MHz to 400 MHz
180	AM	2 MHz to 400 MHz
180 R	AM	5 MHz to 475 MHz
188	FM	86 MHz to 108 MHz
189	FM	86 MHz to 108 MHz, 10.7 MHz
800	FM	Mobile Bands
801	FM	Mobile Bands
802	FM	Mobile Bands
840	FM	400 MHz to 1000 MHz

CALIBRATORS

MODEL	FREQUENCY RANGE
111	250 kHz to 1000 MHz
111 B	100 kHz to 1000 MHz
950	54 MHz to 250 MHz

SQUARE WAVE AND PULSE GENERATORS

MODEL	FREQUENCY RANGE
71	Square Wave 6 Hz to 100 kHz
72	Square Wave 5 Hz to 5 MHz
179	Pulse 60 Hz to 100 kHz

INTERMODULATION METER

MODEL	I. M. FREQUENCIES
940	60 and 120 Hz (low) 3, 7 and 12 kHz (high)

MEGACYCLE "GRID DIP" METERS

MODEL	FREQUENCY RANGE
159 Std.	Oscillator only (2.2 MHz to 420 MHz)
159 LF	Oscillator only (100 kHz to 4.5 MHz)
159 UHF	Oscillator only (420 MHz to 940 MHz)
159 P.S.	Power supply only
159 COMB.	Above oscillators, with one power supply

VACUUM TUBE VOLTMETERS

MODEL	FREQUENCY RANGE
67	Peak-to-peak (5 Hz to 100 kHz)
162 & 162 R	20 Hz to 300 MHz

BOLOMETER BRIDGE

MODEL	FREQUENCY RANGE
202-C	2 MHz to 1000 MHz

FREQUENCY METERS

MODEL	FREQUENCY RANGE
700	25 MHz to 50 MHz
760	Mobile Bands

DEVIATION METER

MODEL	FREQUENCY RANGE
140 A	25 MHz to 1000 MHz (0-20 kHz Dev.)
141	2 MHz to 500 MHz (0-20 kHz Dev.)

SIGNAL GENERATION SYSTEMS

• Hi-Stability • Logic Control Switching • Custom Applications

WIDE BAND TRANSMITTER EXCITER

- 2-30 MHz output frequency with inputs of 2 to 10 MHz
- Two internal 10 channel oscillators
- Logic Controlled switching and tuning
- ±.0005% Stability
- Harmonic distortion less than 1%
- Up to 1 watt output

Operates on 115 VAC or 230 VAC, 50 to 400 Hz

URE SINE WAVE GENERATOR

- 12 Discrete frequencies in a 1KHz to 20KHz range
- Push Button Selectable
- Harmonic distortion less than .1%
- 1 VRMS into 600 ohm load balanced or unbalanced
- Individual level adjust and master level adjust

HI-FREQUENCY: HI-POWER

- 1 to 500 MHz frequency range
- Minimum of 5 watts into 50 ohms
- Turn-counting pot for output level adjust
- Less than 12 lbs. weight
- Stability to $\pm 1 \times 10^{-8}$

Operates on 117 VAC, 50 to 400 Hz

0 Hz, 60 Hz, or 400 Hz TIME STANDARD

- $\pm 1 \times 10^{-7}$ frequency stability
- 120 VRMS output voltage
- ±.5% output regulation
- 25 Watt output power
- Square wave or sine wave available
- Operates from 120 VAC, 50 to 400 Hz or 28 VDC

30 to 35 MHz TRANSMITTER EXCITER

- 1 VRMS output into 50 ohm load
- $\pm 5 \times 10^{-8}$ stability
- Sine wave
- Harmonic distortion less than 5%
- Remote keying capability

FCC approved in the 32 to 33 MHz range

"Designed for Application"® OSCILLOSCOPES AND ACCESSORIES

MODULE OSCILLOSCOPES

Miniature, packaged panel mounting cathode ray module oscilloscope indicators for monitoring. Designed to be built into equipment. Require minimum panel space. Use separate module power supply.

No. 90901 uses 1CP1 fixed focus cathode ray tube. Smallest and most economical of the module oscilloscopes. Panel 2⅜″ square.

No. 90911 uses type 1EP1 flat face 1¼″ cathode ray tube. Balanced deflection. Blanking input. Sharp focus. Panel 2⅜″ square.

No. 90912 uses type 2BP1 two inch cathode ray tube. 3″ x 5″ panel.

No. 90912-R uses type 3UP1 2⅛″ x 1-9/16″ cathode ray tube.

No. 90913 uses type 3XP1 3″ x 1½″ rectangular cathode ray tube.

No. 90914 uses type 4KP1 3½″ square cathode ray tube.

No. 90943 uses type 3KP1 Three inch C-R-T. Contains power supply.

No. 90945 uses type 5BP1 Five inch C-R-T. Contains power supply.

BASIC OSCILLOSCOPES

Rack mounted inexpensive basic oscilloscopes including cathode ray tube circuit, power supply; intensity, focus, and centering controls, magnetic shielding, safety features, switches, etc..

No. 90902 uses type 2BP1 two inch cathode ray tube. 3½″ x 19″ panel.

No. 90902-M designed to meet military specification MIL-T-945.

No. 90903 uses type 3KP1 three inch cathode ray tube. 5¼″ x 19″ panel. Power requirement — 105-125 volts 60 cycles — 19 watts.

No. 90903-R uses type 3XP1 3″ x 1½″ rectangular cathode ray tube.

No. 90905 uses type 5UP1 five inch cathode ray tube. 7″ x 19″ panel.

No. 90905-B uses type 5ADP1 five inch flat face precision tolerance cathode ray tube. Balanced deflection. Blanking input. 35 W at 117 V.

No. 90905-D for balanced direct coupled deflection. Uses 5ADP1.

No. 90905-R uses type 5BXP1 4⅝″ x 2⅝″ rectangular C-R tube.

COMPACT COMPLETE OSCILLOSCOPES

Extremely compact oscilloscopes complete with amplifiers, linear low frequency sweep, and power supplies. Balanced deflection for minimum distortion. High accelerating potential for good resolution.

No. 90923 uses type 3XP1 3″ x 1½″ rectangular cathode ray tube. 3½″ x 19″ panel. 0.4 V. p to p per cm. defl. d.c. to 275 kc.

No. 90923-C uses 3RP1. 5¼″ x 10½″ panel. 50 mv p to p per cm.

No. 90925 uses type 5BXP1 4⅝″ x 2⅝″ rectangular C-R tube. 3½″ x 19″ panel. 0.16 V. p to p per cm. defl. DC to 550 kc.

No. 90925-A Vertical amplifier is 50 mv. p to p per cm. to 2.5 mc.

No. 90925-B Low frequency linear sweep 3 seconds per sweep to 22 kc.

PORTABLE FIELD OSCILLOSCOPES

Especially suitable for use in factory, laboratory, and the field for desig installation, maintenance, and service. Well shielded against magnetic fiel Excellent linearity. Sharp focus. Compact.

No. 90915 uses 5AQP1. Frequency response either amplifier DC to 200 Completely insulated front panel and case. Double shielded.

No. 90952 Synchroscope or Oscilloscope. 7½″ x 5⅝″ x 13″

No. 90954 uses 4KP1 3½″ square CRT. 7½″ x 9½″ x 13½″ insulated ca 23 pounds. Response DC to 1.2 mc. 0.1V. per cm.

MONITOR OSCILLOSCOPE

No. 90932 Amateur Band Monitor Oscilloscope is a complete oscilloscope monitoring the modulated r-f output of a transmitter. Built-in link-coup tuned circuits cover all amateur bands 3.5 to 54 mc. All circuits and cessories are built in. The monitor will display the r-f envelope and/or trapezoidal monitoring pattern.

AMPLIFIER/SWEEP UNITS

Amplifier/Sweep Units are accessories which may be used with any ba or module oscilloscope. They contain a vertical amplifier, a horizon amplifier, a sweep generator and power supplies.

No. 90921 Inexpensive rack mounted unit. 5¼″ x 19″ panel.

No. 90921-A DC to 1 mc. Vert. amp. Balanced deflection. 0.3V./cm.

POWER SUPPLIES

Compact high voltage and low voltage power supplies for oscilloscopes 1⅞″ x 2⅛″ x 4⅝″. Input 117 volts 50/60 cycles. Supply accelerating centering potential for oscilloscopes.

No. 90202 is a plug-in supply for high voltage and heater power for of the MILLEN Module Oscilloscopes. Output 750 volts dc at 3 ma.

No. 90202-M designed to meet military specification MIL-E-16400.

No. 90203 supplies B+ and heater to three amplifiers and a sweep.

No. 90203-A has external filter capacitors for military applications.

MODULE ACCESSORIES

The MILLEN Module Oscilloscope Amplifiers and Sweep are comp plug-in units designed to provide the required deflection voltages for MILLEN series of Module and Basic Oscilloscopes.

No. 90924 A-C coupled unit. Use as pre-amplifier or deflection amp.

No. 90926 Plug-in linear sawtooth sweep generator. Controls on top.

No. 90927 Several versions of direct coupled deflection amplifier.

GRID DIP METERS

No. 90651-A GRID DIP METER

The No. 90651-A Grid Dip Meter has a transistor d.c. amplifier to increase sensitivity. It provides full scale meter reading at all frequenies from 1.7 to 300 mc. It has a modern, taut band meter to eliminate any possibility of meter ever becoming "sticky". These additions are made while still maintaining all of the features which have made the MILLEN No. 90651 Grid Dip Meter so thoroughly reliable it has become the standard of the industry. It uses the same stable oscillator without spurious dips, it has a transformer-type power supply, it has seven coils protected by forming molded covers, etc.

No. 90651 STANDARD GRID DIP METER

The No. 90651 Grid Dip Meter is complete with a convenient polypropylene carrying case which keeps the coil/probes with the Grid Dip Meter and protects both. Frequency coverage is 1.7 to 300 mc. with the seven coil/probes finished. Additional coils for extending the calibration to 160 kc. are available. See below.

No. 90662-A LABORATORY AND INDUSTRIAL GRID DIP METER

The No. 90662-A Industrial and Laboratory Grid Dip Meter is hand calibrated from 225 kc. to 300 mc. Calibration accuracy is +0.5%. Additional features are a d.c. amplifier for excellent sensitivity at all frequencies, modulation, easily read dial, three wire grounding-type power cord and stable carrying case.

No. 90662 INDUSTRIAL GRID DIP METER

The No. 90662 Grid Dip Meter covers the frequency range of 225kc. to 300mc. and is hand calibrated with calibration accuracy of +0.5%. It is supplied with a carrying case, three wire grounding-type power cord and a plug-in modulator. The d.c. amplifier and internal modulator are not supplied.

No. 90661 INDUSTRIAL GRID DIP METER

The No. 90661 Grid Dip Meter covers the frequency range of 1.7 to 300 mc. and is hand calibrated with calibration accuracy of +0.5%. It is supplied with a carrying case and three wire grounding-type power cord. DC amplifier, modulator and L-F coils are not supplied.

ACCESSORIES

No. 90672 ANTENNA BRIDGE

The No. 90672 Antenna Bridge is an r-f bridge which uses a Grid Dip Meter as a source of signal. It is a sensitive bridge for measuring impedance in the range of 5 to 500 ohms for unbalanced impedances.

No. 90751 TONE MODULATOR

The No. 90751 Tone Modulator plugs into the 'phone jack of a Grid Dip Meter to provide 800 cycle modulation.

No. 46721 PROBE — Used where it is difficult to couple directly.
No. 46701 COIL KIT — Coil form and cover for Grid Dip Meter. No coil.
No. 46702 LOW FREQUENCY COIL/PROBE — 925 to 2000 kc.
No. 46703 LOW FREQUENCY COIL/PROBE — 500 to 1050 kc.
No. 46704 LOW FREQUENCY COIL/PROBE — 325 to 600 kc.
No. 46705 LOW FREQUENCY COIL/PROBE — 220 to 350 kc.
No. 46706 LOW FREQUENCY COIL/PROBE — 160 to 225 kc.
No. 46672-10 BALUN — Reactances tuned out for 10 meters and C.B.
No. 46672-15 BALUN — Reactances tuned out for 15 meter amateur band.
No. 46672-20 BALUN — Reactances tuned out for 20 meter amateur band.
No. 46672-40 BALUN — Reactances tuned out for 40 meter amateur band.
No. 46672-80 BALUN — Reactances tuned out for 80/75 meter band.

PRECISION LABORATORY INSTRUMENTS!

SPECIALISTS IN BATTERY OPERATED SOLID-STATE INSTRUMENTS

MV-722A, R.F. Millivoltmeter with Digital readout. 3mV to 10V F.S. to 300V with 100/1 divider. 10KHz-100MHz ±3%, 100MHz-400MHz ±5%, 400MHz-1.2GHz 10%. 115/230V. 50-450Hz....$1150

MV-928A, Same as MV-722A except 1mV to 3V, 300V with divider. Analog readout, Battery or 115/230V. 50-450Hz 775

MV-828A, Same as MV-928A without battery operation 675

MV28B, Same as MV828A, except vacuum tube model 625

MV-38B, Same as MV28B except 3mV-3V F.S. 525

MV-952A, Ultra Sensitive Solid State Micro-Volt-Ammeter. Measures 10uV to 1KV DC F.S. with 1% basic accy. Current 10pA to 10mA with 2% basic accy. 1 to 100 meg input, Shunts, 1 meg to 1 ohm. Battery operated and/or 115/230, 50/450Hz 695

MV-852A, Same as MV-952A, except without battery operation 625

MV-07C, Measures same as above, but tube model and operates on 115/230, 50/60Hz only 575

MV-27E, 250uV to 1KV, F.S. DC, 14 ranges, imp. 10-100 megs, 1% accy. 425

MV-127B-L, 100uV to 1KV, F.S. DC, 15 ranges, inp. imp. 1-100 megs, 1% basic accy. 475

MV-11E, 100pA to 10A, F.S. DC, 23 ranges, shunts 10 meg. .001 ohms, 1% basic accy. 425

MV-111B-L, 100pA to 250mA, F.S. DC, 20 ranges, shunt 1 meg .004 ohm, 1% basic accy. 475

MV-77B, 1mV-1KV, 1uA-1A, F.S. 1 ohm-5K meg. Input imp. 10-100 megs, 1, 2, 2% basic accy. 475

MV-964A, Solid-State Multimeter, 100uV to 1KV, DC F.S. Current 100nA to 1A F.S. Ohms 1 to 100 megs center scale. Input imp. 10-100 megs. Shunts, 10K to .01 ohms. Basic accy. volts 1% current 2%, ohms 5 & 10%. Battery operated and/or 115/230, 50-450Hz 525

MV-864A, Same as MV-964A, except without battery operation 445

MV-279C, Direct reading Linear Scale ohmmeter, 1 ohm-10 megs F.S. 15 ranges Rx drop 10mV. 1% accy. 550

MV-276B, Wheatstone Bridge, 1 milliohm to 1000 megs, .05%, basic accy. Lead resistance cancellations and calibrated 1% unbal. Max. dissipation 1mW 1050

MV-45A, 10uV to 1KV, F.S. AC, 17 ranges inp. imp. 10K to 3.3 meg, AC amp output 40db, 3% basic accy. 425

VS-68B, Hi-Impedance Hushed Transistor Amplifier, 10K, 100K and 50 meg input. Transistorized 575

VS-64A, Same as above except 10K and 100K input only 425

PANEL MOUNTED ELECTRONIC VOLTMETERS

PM-504A, DC Voltmeter measures 100uV to 1KV, F.S. in 15 ranges. 100uV, 3%, All others 2% F.S. accuracy. Operates on 115/230V. 50/60 Hz, 10 megs input $375

PM-503A, Same as above except 12 ranges, 1mV F.S. to 1KV F.S. $350

PM-502A, Same as above except 11 ranges, 10mV, F.S. to 1KV F.S. 325

PM-522A, Solid-State RF Millivoltmeter. Freq. Resp. 10KHz to 1.2GHz; Basic accy. ±3%, Measures 3mV to 10V F.S. in 8 ranges to 300V with 100/1 Divider. 10KHz to 100MHz, ±3% accy. 100MHz to 400MHz ±5% accy. 400MHz to 1.2GHz ±10% accy. 115/230V. 60 Hz 500

PM-301A, VTVM, 10mV F.S. to 1KV F.S. in 11 ranges, 3% accuracy, 10 meg input, 115/230V 60Hz 280

PM-311A-1, AC Voltmeter, 10mV F.S. to 300V F.S. in 10 ranges. Accuracy 1% 50Hz to 100KHz, 3% from 20Hz to 250Hz. Input 5 megs shunted by 25pF, −40 to 50db, 115/230V 50-400Hz 250

PM-311A, Same as above, except 3, 4 and 5% accuracy 200

PM-300-1, DC Multi-Range Voltmeter. 1V to 1KV F.S. in 7 ranges. 1% accuracy. 115/230V 50-400Hz. Input 10 meg 155

PM-300, Same as above except 3% accuracy 120

(Also available, 4½" square single range AC or DC. Panel Mounted Meters.)

SPIKE READING MEMORY VOLTMETERS... VOLTAGE MEMORY PAKS AND A-D CONVERTERS

SPIKE READING MEMORY VOLTMETERS AND SYSTEMS

icro Instrument Co. offers a complete line of ecision memory voltmeters and systems for dustrial, commercial and aerospace mea- rement of peak pulse amplitude and one ot pulses. Features include: positive and gative readout of amplitude to 30 kV; digital meter readout; strip-chart or printer opera- n; analog or digital outputs; continuous line onitoring with systems to 100 channels. For tails on the complete line, contact your local presentative or Micro Instrument Co. directly.

MODEL 5201C

MODEL 5203

DIGITAL READOUT MEMORY VOLTMETER — DUAL SHIELDING CABINET — MODEL 5203

The Model 5203 is a new 4-digit Memory Voltmeter, featuring digital readout of dc to 50 nanosecond single pulses with amplitudes to ±1000 volts in four ranges; it also has overrange capabilities, as well as an optional probe for measurements to 10 kV. It is a broad-band, dc to 50 MHz, all solid-state instrument that will measure any ac or dc coupled parameter that can be defined in terms of peak voltage; it holds the peak amplitude of one-shot or transient pulses, as well as repetitive pulses, until an input voltage of greater amplitude occurs, causing an increase in the reading, or until operator or automatic reset. Automatic reset permits using the digital Memory Voltmeter as a conventional RF digital voltmeter. Accuracy of wide band peak value will be displayed to 1% of full scale, with narrow band measurement ¼% of reading ±2 bits.
The Model 5203 is housed in a dual shielded cabinet to prevent radiated transient pick-up, ground loops or common mode errors; this also permits off-ground measurements to 1000v while maintaining the cabinet at ground potential for operator safety. The instrument's case is a 7 inch high half-rack cabinet for portable use or for rack mounting. Available features include: provision for remote programming of mode, range and reset; analog output; BCD output; sample-and-hold capability.

SPECIFICATIONS

Input: Single-ended. Ground isolated.
Voltage Range: 0.999, 9.99, 99.9 and 999V full scale. To 10 kV with optional H.V. probe.
Input Impedance: 1V range, 10K ohms; 10V range, 100K ohms; 100V range 1Mohms; 1000V range, 10Mohms. All ranges shunted by 100pF max.
Pulse Width Range: DC to 50 nanoseconds (wide band) DC to 400 microseconds (narrow)
Accuracy: 1% wide band; ¼%, ±2-bits narrow.
Readout: 4-digits in-line.
Price: $1,550.00

METER READOUT MEMORY VOLTMETER — DUAL SHIELDED CABINET — MODEL 5201C

The Model 5201C Memory Voltmeter is an all solid-state broad-band, dc to 20 MHz instrument, with amplitude memory. With ac and dc ranges from 0 to 1000 volts, the instrument will measure and store the maximum peak voltage applied. The voltage range may be extended to 30 kv; pulses as short as 50 nanoseconds duration will be recorded. Voltages of greater amplitude than the stored voltage will increase the reading, displaying the maximum voltage detected. In addition, a front panel switch permits automatic reset of the internal memory allowing operation as a standard peak-reading voltmeter that will follow the peak value of a varying waveform. The peak amplitude is displayed on a 5" taut-band, mirror-backed 1% panel meter. The instrument is housed in a dual shielded cabinet to prevent radiated transient pick-up. This construction also permits off ground measurement while maintaining the cabinet surface at ground potential for operator safety. The common side of the input is isolated from ground thus preventing ground loops in systems checkout work, or incorrect connection for power line monitoring applications. Portable cabinet standard, single or dual rack mount units available. Optional gate circuit available for sample and hold operation. Variable response control to reduce band width in 5 steps for added versatility.

SPECIFICATIONS

Voltage Range: 0-3, 10, 30, 100, 300, 1000 v. Can be operated up to 1000 v above ground.
Input Impedance: 100k to 10 megohms (depending on range).
Pulse Width Range: DC to 50 nanoseconds.
Accuracy: ±3% of full scale.
Operating Modes: +, −, ± (dc or ac coupled).
Price: Model 5201C ..... $ 795.00

Single Rack Mount: Model 5201C-1 .. $ 845.00
Dual Rack Mount: Model 5201C-2 ... $1690.00
Gate Ckt. Option: ..... $ 100.00
Hi Voltage Probes: (3, 10, 30kv) each $ 100.00

PEAK VOLTAGE MEMORY PAKS AND A-D CONVERTERS

oltage Memory Paks are available in two asic versions: Pulse Stretchers with tempo- ary memory for recording of short duration ulses with low frequency devices and Volt- ge Memories that provide permanent stor- ge of the measurement values.

The Pulse Stretcher Paks and Voltage Mem- ry Paks may either be used separately or to- gether to form a system for measuring a wide variety of single, repetitive or complex wave- forms and permanently retain the maximum peak value.

CONVERTS SINGLE OR REPETITIVE PULSES TO DC OR DIGITAL OUTPUT FOR PERMANENT STORAGE... UNTIL RESET

SERIES 5221

VOLTAGE MEMORY PAKS PERMANENT MEMORY

- **Pulse To Digital Conversion**
- **Analog To Digital Conversion**
- **Conversion Times To 100 Microseconds**
- **Accuracies To +0.1% Of Reading**

The Voltage Memory configurations convert the peak analog or pulse voltage input of single or repetitive pulses into a digital or D.C. output for readout by meter, digital display or other appropriate monitoring device. This output level will be held permanently until a higher peak input is applied or until the memory is reset by external contact closure or application of a reset pulse.

DIGITAL OR ANALOG OUTPUT

Digital output is available in binary, BCD or as a DC voltage proportional to the input amplitude. An average of the peak output may be provided by applying the reset signal periodically, thus allowing the memory to function as a conventional peak reading voltmeter.

CONTINUOUS UNATTENDED MONITORING

Random transients or periodic pulse peaks may be monitored without continuous observation because the binary register will retain the pulse peak permanently... even if the input signal is removed.

Price: $150.00 up.

SERIES 5222

PULSE STRETCHER PAKS BUFFER MEMORY

- **Pulse To Analog Conversion**
- **Analog To Analog Conversion**
- **Acquisition Time to 50 Nanoseconds**
- **Accuracies To ±1.0%**

Pulse Stretchers convert short duration peak voltage pulses into longer pulses. These temporary dc voltages provide excellent accuracy for pulses in the nanosecond region. They also provide a suitable input for low frequency monitors, such as strip chart recorders, and DVM's which would otherwise be unable to monitor pulses in the nanosecond range.

POSITIVE OR NEGATIVE MEASUREMENTS

Pulse Stretchers are available for either positive or negative signal operation. They may be used together to provide simultaneous positive and negative pulse stretching.

TRUE PEAK READING AND HIGH INPUT CHARGING RATES

The Pulse Stretcher charging current is "snapped off" upon reaching the peak voltage. This produces greater accuracy than conventional voltage averaging devices which never achieve full charge and which have a rapid capacitor discharge through associated circuitry.

Price: $150.00 up.

PRICES AND SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE.

MULTIPLE PLUG-IN DIGITAL BRIDGE TEST SYSTEM

MIC SUPERBOX . . . The new concept in component test systems consisting of a basic Data-Deck and optional plug-in test modules for optimum test capabilities at minimum instrument cost

MULTIPLE PLUG-IN DIGITAL BRIDGE "DATA DECK"— MODEL 6100

Similar in concept to plug-in oscilloscopes, the Model 6100 brings the same kind of versatility to digital component testing. The system features two basic sections: (1) the 6100 Data-Deck; and (2) any one of many MIC plug-in modules. Buy the basic Data-Deck with basic controls, readouts, circuits and power supply just once . . . add inexpensive plug-in modules for specific tests as required. Typical test modules are detailed at right. The model 6100 features true self-balancing bridge techniques with laboratory accuracies.

MODEL 6100 SPECIFICATIONS

Readouts: Two sets of readout tubes: in groups of six digits and three digits.
Controls: Pushbutton control of all operating functions.
Outputs: Electrical BCD outputs for both 6 digit and 3 digit displays;Test/Display signal; Print command signal for remote printer.
Inputs: Display "Hold" line . . . allows hold of BCD data by electrical signal;External Trigger input.
Dimensions: 10-1/2" high by 19" wide by 20" deep.
Price: $2,495.00

1 KHz CAPACITANCE PLUG-IN UNIT MODEL 6205

Used in conjunction with the MIC Model 6100 digital Data-Deck, the Model 6205 plug-in module provides a complete test instrument for simultaneous display of both capacitance and dissipation factor at one kilohertz.

SPECIFICATIONS

Test Frequency: 1000 Hz, ±5%
Capacitance Ranges: From 1pF to 150 μF in 8 ranges, with complete automatic ranging.
Capacitance Accuracy: (Cs Measurement) 0.1%
DF Range: 0.00 to 9.89%
DF Accuracy: ±1% of reading, ±1 Digit.
Test Signal Amplitude: 1 volt rms, max.
DC Bias: Internal: 0 to 5VDC, front panel adj., External: 0 to 300 VDC
Test Time: 200 msec, nominal.
Price: $1,495.00

120 Hz CAPACITANCE PLUG-IN UNIT MODEL 6208

Model 6208 120 Hz Bridge plug-in and a Model 6100 Digital Data-Deck make a complete test system for simultaneous display of both capacitance and loss at 120 Hz. The loss factor can be optionally displayed as DF or ESR by the push of a panel button.

SPECIFICATIONS

Test Frequency: 120 Hz, ±2%
Capacitance Ranges: From 500pF to 1500 μF in six ranges.
Capacitance Accuracy: ±0.1% of reading, ±1 Digit.
DF Range: 0.00 to 9.89%, 00.0 to 98.9%
ESR Ranges: 6 Ranges from 989. milliohms to 989. kilohms.
Accuracy: DF and ESR: ±1% of reading, %1 digit.
Test Signal Amplitude: 1 volt rms, max.
DC Bias: Internal: 0 to 5VDC, External: 0 to 300VDC
Test Time: 1 second, nominal.
Price: $1,495.00

Contact the factory for complete data on these and other plug-in modules.

Several plug-in modules available include: Resistance; Capacitance to 1.2 Farad; Capacitance & ESR at 100KHz; Capacitance & Df at 1MHz

CAPACITANCE TEST INSTRUMENTS AND SYSTEMS

A complete line of capacitance test instruments are available from Micro Instrument Co. Included in the line are: 120 Hz, 1000 Hz and 120/1000 Hz; C and DF limit bridges and digital readout capacitance testers featuring true series capacitance measurements; high speed digital comparators; interface units for card punch and related BCD functions; digital capacitance ratiometer; capacitance-winder, auto-controller and systems for intermittency testing or for complete data logging. Contact your local representative or the factory for complete details.

MODEL 1212

MODEL 1206

1 MHz C & DF DIGITAL CAPACITANCE TESTER — MODEL 1212

The Model 1212 is the first instrument that simultaneously displays dissipation factor in digital form on a 1 MHz instrument along with the capacitance measurement. This all solid-state capacitance tester uses a true automatic bridge circuit for high accuracy measurements in ½ second. BCD output information is supplied for interfacing with printers, card punches, computers, etc. The conveniently located two and three-terminal (guarded) connections permit front panel component testing, while eliminating stray capacitance errors. A variety of test jigs and adapters are available to extend the rapid testing versatility of the unit.

SPECIFICATIONS

Capacitance Range: 0 to 1999.99 pF full scale.
Capacitance Accuracy: ±½% of reading ±3 digits.
Capacitance Readout: 6 in-line readout tubes.
D.F. Range: 0 to 9.99%
D. F. Accuracy: ±1% of reading ±3 digits.
Readout: 3-digit in-line readout tubes.
Single Level: 500 mV rms.
Test Time: 500 msec.
Display Time: Variable from 50 to 500 msec.
Stray Capacitance: 100 pF null control.
Trigger Operation: Input trigger pulse permits single readings to be displayed indefinitely; a repeat trigger pulse resets instrument to zero and displays next readings.
Outputs: 1-2-4-8 BCD (0 = 0V, 1 = +3.5v min. into 50K ohms)
Terminals: Guarded input test fixture provided with instrument for axial lead components.
Price: (rack mount) $4,775.00

1 MHz HIGH SPEED DIGITAL CAPACITANCE TESTER — MODEL 1206

The Model 1206 is a new direct reading 1 MHz capacitance tester featuring high reliability integrated circuitry for fast test time of 50 milliseconds. The instrument also features a 50% over-range which minimizes switching at often used test values, permitting faster testing. The instrument provides direct digital readout of measurements from 0.01 pF to 1500 pF. The tester may be equipped with a wide range of comparators for high speed sorting. The instrument also provides low impedance, short circuit-proof output signals which will directly drive digital printers and can be interfaced to card punches, electric typewriters, etc. Automatic zero control circuit produces extreme stability and drift free operation.

SPECIFICATIONS

Ranges: 00.01 pF to 1500 pF.
Over-Range: Fifth digit 50% over-range.
Accuracy: ±¼% of reading ±1 digit.
Readout: 5-digit, in-line, readout, with blanking.
Signal Level: 0-100 pF range: 35mV rms max.
Test Time: 100 msec nominal.
Display Time: 25 msec adjustable from ¼ to 1 sec.
Maximum Frequency Variation: 1% (at full scale).
Low Q Tolerance: No accuracy loss for 10K ohms shunt resistance or greater.
DC Bias Supply: 0-100 vdc in two ranges.
Stray Capacitance: Front panel controls permit neutralization of up to 100 pF.
Off-Scale Indicator: Front panel light.
Off-Zero Indicator: Front panel light.
Outputs: 1-2-4-8 BCD (0 = 0v, 1 = +5v min). Source impedance 600 ohms maximum.
Terminals: Guarded input test fixture supplied.
Price: $3,000.00

LIFE TEST SYSTEMS, LIFE TEST POWER SUPPLIES and LIFE TEST CARDS

LIFE TEST SYSTEMS

LIFE TEST SYSTEMS

Micro Instrument Company offers, to the industry, the most versatile and reliable component power aging systems available. These systems have proven themselves through hundreds of thousands of hours of operation in customer facilities. Systems are available for testing resistors, capacitors, diodes, transistors, power transistors, rectifiers, and integrated circuits (both flat pack and TO-5 types). The power aging techniques employed include Reverse Bias Soak, Forward Bias Power Dissipation, Dynamic (AC Power Simulation) Operation for Diodes, DC and Dynamic Tests for Integrated Circuits, Resistor Power Dissipation, and Capacitor Voltage Soak. Systems are available for either ambient or elevated temperature testing.

STANDARD MODELS —

The Models 1024 and 1025 are modular systems ideally suited for testing small components such as resistors, capacitors, signal diodes, and transistors. In these systems, the components to be tested mount on printed

circuit cards with proprietary spring clips, or with printed circuit type transistor sockets. The systems have a capacity of eight cards, each mounting up to 200 axial lead or 100 3-lead components. Tests may be performed under reverse or forward bias conditions. The Model 1024 system connects each test device in series with a load resistor, which is installed on a connector assembly (resistor module) mounted on the outer wall of the test chamber. This system is used primarily for reverse

bias testing where parameter measurement at elevated temperature is not required. The Model 1025 system is similar to the Model 1024, but uses plug-in load cards for mounting the load resistors. The load card may be removed and a scanner head inserted for parameter measurement while the components are at elevated temperatures. The Models 1024 and 1025 provide exceptional versatility. Load resistor modules are readily changed, allowing easy conversion; for example, from a forward soak to a reverse bias test for diodes. Transistors may be operated with emitter and/or collector load resistors under power conditions or in a reverse bias circuit. Component mounting cards of many different circuit configurations are available for these systems. Variations of the basic systems are available with internal bias supplies.

INTEGRATED CIRCUIT SYSTEM —

The Model 8500 Integrated Circuit Power Aging System consists of two interconnected assemblies: the temperature test chamber, and the power supply, pulse generator, and failure indicator console. The components to be tested are inserted in mother boards. The mother boards plug into rack connectors in the temperature chamber which distribute the various bias and signal drives. The mother board also contains monitor lines, and a signal mixing circuit to provide failure indication.

The Model 8500 is available in three basic sizes:

The -1 holds 32 mother boards
The -2 holds 48 mother boards
The -3 holds 80 mother boards

GENERAL INFORMATION —

Standard power aging systems operate in the temperature range of +40 to +150°C with overall accuracy including control, gradient, and drift of ±3°C. Special systems with temperature ranges to 325°C are available. Micro Instrument Company offers a wide variety of printed circuit cards and trays for holding components for various systems. Micro Instrument Company will be pleased to discuss any lift test requirement, suggesting possible test methods and system concepts.

SWITCHING TYPE LIFE TEST POWER SUPPLIES AND LIFE TEST SYSTEMS

SWITCHING-TYPE POWER SUPPLY — MODELS 9100-100, 9100-300

The Model 9100 Switching-Type Power Supply is used in life testing and power aging of semiconductor rectifiers. The output waveform consists of a half-sine wave adjustable from 0 to 15 volts peak (for forward conduction through the test rectifiers), and a half-sine wave adjustable from 0 to 1000 volts peak, depending on the model, (for reverse voltage stress on the test rectifiers). Both forward current and reverse voltage are independently adjustable. Forced-air cooled SCR's are used as switching elements; the SCR's are automatically turned off for over-load or over-temperature conditions.

SPECIFICATIONS

Average Rectified Forward Current (Io): 0 to 300 A (Model 9100-300). 0 to 100 A (Model 9100-100). Outputs in two equal channels.
Forward Voltage: 0 to 15 volts peak.
Forward Form Factor: 170° typical into rectifier & resistive load at max. forward volts.
Forward Current Metering: 0 to 150 A to (Model 9100-300. 0 to 50 A to (Model 9100-100).
Forward Current Interlock: Remote contact.
Forward Current Indication: Front panel light:
SCR Protection:
Peak Inverse Voltage: 0-200 volts (-2); 0-400 volts (-4); 0-600 volts (-6); 0-1000 volts (-10).
Peak Inverse Current: 350mA peak continuous.
Reverse Voltage Metering: 0-100, 300, 1000.
Transient Protection & SCR Protection
Input and Output: Terminal strips on rear.
Input Power: 208 or 230 volts, 60 Hz, single phase, 4500 VA (Model 9100-300), 120 volts, 60 Hz, single phase, 1800 VA (Model 9100-100).
Size: 17½" H (9100-300), 8¾" H (9100-100).
Weight: 275 lbs. (9100-300). 150 lbs. (9100-100).

Prices: In 1 to 4 quantities, complete including SCR's. Model 9100-300-2 (200v), $1703.00; -4 (400v) $1774.00; -6 (600v) $1884.00; -10 (1000v), $2168.00. Model 9100-100-2 (200v), $1276.00; -4 (400v) $1332.00; -6 (600v), $1395.00; -10 (1000v) $1620.00.

COMPONENT LIFE-TEST CARDS

These high-reliability epoxy-glass, printed circuit cards offer efficient power aging and testing to +150°C with low cost per position. The component mounting cards are available in a wide variety of configurations and sizes with mounting sockets or M.I.C. proprietary mounting clips. Automatic eyeletting and soldering insure uniformity of workmanship and high quality at low cost.

CARD TYPES — Many types of component cards are available, broadly categorized by connector pins (44 pin, 56 pin and 210 pin), by component type (two-lead and three-lead or combination), and by circuit (sensing, non-sensing, etc.).

SPECIAL CARDS — A wide variety of special designs are available, or can be made to customer requirements. Cost is comparable to standard designs except for an average one-time engineering charge of $150.00 to $250.00.

PRICES AND SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE.

MODUTEC
TAUT BAND PANEL METERS

The Modutec family of precision, self-shielded, permanent-magnet / moving coil panel meters combines state-of-art movements with advanced, functional styling.

Each of the five Modutec series is available in a full range of five sizes.

FEATURES AND SPECIFICATIONS

Movement — High torque, frictionless taut-band suspension assures long life and dependable high accuracy.

Scale — 100° long, linear, low-profile scales provide easy, accurate reading.

Accuracy: ±2% for DC meters; ±3% for AC meters (60 Hz sine wave).

Tracking: ±1.5% for DC meters; ±2% for AC meters.

Modutec meters meet or exceed the performance requirements of USA Standard C-39-1.

S SERIES
SURFACE MOUNT BLACK COVER

The handsome aspect ratio and clean cut detailing of these meters will add distinction to any instrument or control panel. Available in five sizes and a wide variety of ranges, this series provides new latitude for the equipment designer.

C SERIES
SURFACE MOUNT CLEAR COVER

This series features a case front of clear acrylic, polished on the outside and closely ribbed on the inside surface. The visual effect of this is to greatly reduce contrast between the meter and the adjacent panel, resulting in a very pleasing overall appearance.

DIMENSIONS, AND PANEL CUTOUT FOR BARREL

METER SIZE	A	B	C	D	E	G	J	M	N
1½"	1.75	2.24	1.31	1.31	.66	.83	.34	4-40	1.55
2½"	2.27	2.99	1.88	1.88	.94	1.13	.37	4-40	2.22
3½"	2.87	3.70	2.25	2.25	1.12	1.44	.41	4-40	2.82
4½"	3.96	5.10	3.56	4.00	1.54	1.74	.48	6-32	2.82
5½"	4.48	5.85	3.00	5.25	.85	1.59	.55	6-32	2.82

Ruggedized meters for difficult environments

This series is available in all surface mount, bezel mount, and Windo-mount styles and sizes, and in all types except as noted at right. Hermetically sealed Lexan cases and covers easily withstand treatment that would break or damage ordinary meters. Specially shockproofed movements.

BLUE•DOT™ SERIES

ENVIRONMENTAL SPECIFICATIONS

BLUE•DOT meters meet or exceed the following:

General: MIL-T-21200-H; MILT-T-945-A; USA STND C-39.1.

Shock: 100g per lightweight machine of MIL-STD-202C, method 20

Vibration: MIL-T-21200-H, Class II & III, para 3.2.19.4.
MIL-T-945-B, para 4.4.5 (5-55Hz, 0.06" max ampl.).

Humidity: MIL-STD-202C, Method 103B, test cond. B.

Sand, dust, explosion proof: MIL-T-21200-H.

Flammability: UL Bulletin 94, Group II, UL rating +110°C.

Chemical resistance, cases & covers: See GE Lexan Btn. CDC-392-

PRICES

The following should be added to the basic prices of "S", "C", "BA", or "W" series:

Meter Type	1½"	2½"	3½"	4½"	5½
DC Microammeters*	6.60	6.05	6.60	7.70	8.8
DC Milliammeters	4.95	4.40	4.95	5.50	6.6
DC Ammeters	5.50	4.95	5.50	6.60	7.7
DC Milli- & Voltmeters	4.95	4.40	4.95	5.50	6.6
AC Milli- & Ammeters	6.05	5.50	6.05	7.15	8.2
AC Voltmeters	6.05	5.50	6.05	7.15	8.2
VU & NULL Meters	6.60	6.05	6.60	7.70	

Note: Types not listed above are not available in BLUE•DOT series

*Not available in 20μA or 50μA rating, zero left or zero center.

BEZEL MOUNT METERS

BA SERIES

Cut metal bezels are available for behind-panel mounting of S series or C series meters in all sizes. The cleanly designed bezel features minimum depth and cross-sectional area consistent with function, and is supplied in solid black finish or with brushed metal inline, as shown below.

When you order a bezel mount meter you are, in effect, ordering a complete package, comprising meter, bezel, hardware, template, and mounting instructions. To order, substitute "B" for the letter in the model designation, and add suffix "B1", "B2", "B3", or "B4". For example, 3B-DVV-025-B2 specifies a 3½" DC voltmeter, range 0-25 VDC, bezel mount with brushed metal inline over a clear cover meter.

Prices: Prices of bezel mount packages are obtained by adding to the basic meter prices (on the following page) as follows:

1½" — $2.20 4½" — $2.35
2½" — $2.20 5½" — $2.50
3½" — $2.20

METER SIZE	R	S
1½"	1.37	2.25
2½"	1.59	3.00
3½"	2.16	3.72
4½"	2.75	4.81
5½"	3.14	5.86

BA1 brushed metal inline bezel, black meter cover.

BA2 brushed metal inline bezel clear meter cover.

BA3 solid black bezel, black meter cover.

BA4 solid black bezel, clear meter cover.

WINDO-MOUNT® METERS

W SERIES TAUT BAND

If you want your panel to be the last word in sophisticated styling, specify Windo-Mount® meters! You see only the meter dial, through what appears to be a flush window in the instrument panel. Available in all standard Modutec sizes — concessions need be made to neither function nor appearance.

For illumination, see "Options" on next page. Mounting to panel can be done in several ways; for information request applications bulletin AB6-1 from your Modutec rep or from factory. Price: Same as "S" series, except see "Edge Options", below.

Edge Options

1. Clear. Concealed outside edge of dial cover is polished acrylic. This is the standard meter, and will be supplied unless specified otherwise.

2. White. Concealed outside edge of dial cover is painted opaque white.
To order: Add numeral "2" to the letter "W" in the catalog number, e.g., 4W2-AVU-190-AB, and add $0.75 to the list price.

3. Black. Concealed outside edge of dial cover is painted black.
To order: Add numeral "3" to the letter "W" in the catalog number, e.g., 4W3-AVU-190-AB, and add $0.75 to the list price.

MODIFICATIONS

Certain modifications of catalog meters, the specifications of which are normally detailed by the customer, can be accomplished quickly at Modutec factory modification centers, at costs proportionate to work required. Typical modifications:

Custom Dials or Scales — These can be produced from artwork supplied by Modutec or by customer.

Custom Colors — Meter covers can be finished with paint supplied by the customer.

Suppressed Zero — Up to 60% of the normal range may be suppressed.

Zero Right — Meters with zero-right movements and custom scale can be supplied.

Single-Point Calibration — Can be furnished to an accuracy of 1%.

Special Marking — Case or cover can be hot stamped with customer's name, trade-mark, etc.

SPECIALS

If your application demands special requirements beyond the listed options and modifications, communicate with us. Some of the areas of capability are:

- Damping factor variation
- Response time variation
- Special cases, covers
- High sensitivity movements
- VU meters
- Multiple range meters
- Externally adjustable (dead set) pointer

OPTIONS

The optional features listed below can be promptly incorporated in any standard meter. To order, add the appropriate suffix to the catalog number of the meter, and add the indicated charge to the list price before applying the quantity discount (see above).

Improved Accuracy

Calibration	Add'l Charge	Suffix
±1% tracking, ±1% accuracy	$4.50	A1
±0.5% tracking, ±2% accuracy	8.25	A2
±0.5% tracking, ±1% accuracy	11.00	A3

Colors — 9 standard colors, C suffix, add'l. charge $1.00

Blank Dial — D suffix, add'l. charge $0.50

Lexan Case & Cover — H suffix, add'l. charge $2.25

Illumination Kit — K suffix. For bezel mount & Windo-mount meters. 1½" to 3½", $3.00; 4½" & 5½", $3.25

Mirror Scale — M suffix, add'l. charge $1.00

Single-Point Calibration — P suffix, add'l. charge $2.25

Improved Terminal Resistance—R suffix, add'l. charge $1.00

Sealed Case — S suffix, add'l. charge $2.75

Temperature Compensation — T suffix, add'l. charge $4.00

Rear Zero Adjust — Z suffix, add'l. charge $2.25

Hand Lettered Custom Dials — Add'l. charge $7.50 minimum

NEUTRONIC

MODEL 100 SERIES DIGITAL PANEL METERS

FEATURES

- COMPACT: Physically interchangeable with most conventional 4.5″ Bezel Mount Panel Meters (3.5″ High x 4.5″ Wide x 2.75″ Deep).
- VERSATILE: Capable of measuring AC or DC Volts, Current (with DC Zero Suppression), or Ohms.
- TTL BCD DIGITAL OUTPUTS, REMOTE ENCODE & ISOLATED ANALOG AND DIGITAL GROUNDS STANDARD: Ideally suited for Data Logging System requirements.
- AC OR DC OPERATION: Permits either stationary or mobile use.
- HIGH ACCURACY: ±0.1% of Reading ±0.1% of Full Scale.
- HIGH INPUT IMPEDANCE: Greater than 1,000 Megohms on 0.2 Volt Range.
- 100 MICROVOLT RESOLUTION
- AUTOMATIC POLARITY AND OVERRANGE INDICATION
- NON-BLINKING WIDE ANGLE DISPLAY
- OVERLOAD PROTECTION

DESCRIPTION

The Neutronic Model 100 Series Digital Panel Meters were designed primarily as a high performance, low cost, 3½ digit instrument. They are direct replacements for most conventional 4.5″ bezel mount panel meters, thereby permitting instrument and system manufacturers to use interchangeably that meter which best suits their specific requirements.

MODEL 2000 RESISTANCE LIMIT BRIDGE

FEATURES

- TO 1.2 GIGOHM RANGE
- ±0.005% ACCURACY AVAILABLE
- PPM SENSITIVITY ON ALL RANGES
- INEAR, DIRECT READING PERCENT DEVIATION
- UTOMATIC DEVIATION METER RANGING
- O DEVIATION METER ZERO OR CALIBRATION ADJUSTMENTS
- OW OVERLOAD RECOVERY TIME
- EST VOLTAGE PER MIL-R-93
- OMPLETELY FLOATING, GUARDED AND SHIELDED
- LL SILICON SOLID STATE CIRCUITRY

ESCRIPTION

T Neutronic Model 2000 Resistance Limit Bridge is a human engi- nred, completely self-contained instrument, designed for use in the nufacture of resistors whenever control of a trimming process is uired. The instrument incorporates a unique "Active Guarded Bridge" wch permits features heretofore unobtainable in Resistance Limit Bges. Namely, perfectly linear direct reading percent deviation, with- o any requirement for meter zeroing or calibration prior to use on a range.

MODEL 250 DIGITAL CLOCK

FEATURES

- HIGH STABILITY: Aging rate 5 parts in 10^8/day typical.
- LOW POWER CONSUMPTION: 6 watts typical with the display off.
- COMPACT, LIGHTWEIGHT, INSTRUMENT PACKAGING.
- AC OR DC OPERATION: Permits either stationary or mobile use.
- SYNCHRONIZABLE ELECTRONICALLY TO WWV.
- CONTROL INTERLOCK: Eliminates accidental control misadjustments.
- CONTACT CLOSURES: Each second, minute, hour and day.
- ALL SOLID STATE CONSTRUCTION utilizing monolithic integrated circuits.
- ADVANCE-RETARD: Allows precision real time synchronization.

DESCRIPTION

The model 250 is an extremely accurate and reliable instrument primarily for precision measurement and/or recording of real or elapsed time in fixed or mobile applications. It displays seconds, minutes, hours and days (optional) with an in-line digital display utilizing cold cathode numerical indicator tubes. Pushbuttons are provided to preset instrument to desired start time. It can be started manually — or electronically by synchronizing from the 600 Hz audio tone transmitted by radio station WWV. The instrument also provides an optional serial Time Code Output for recording on magnetic tape, visual BCD outputs for use with data systems or digital recorders, and precision decade rate outputs for synchronization of external equipment.

AC PHASE SENSITIVE

Resolver/Synchro Simulators & Bridges

Most instruments offer a dual mode capability, permitting a single model to work with both resolvers and synchros. All units feature input/output isolation, and also direct in-line readout of angle, i.e., 359.999°, thus eliminating operator confusion, reading error and fatigue. All dual-mode units are also available as single-mode resolver or synchro units.

Series 530—Resolver/Synchro Simulators

These simulators provide the ideal outputs for driving resolvers and synchros at 11.8, 26, 90 and 115 V line-line voltages. These line-line voltages are all available with either 26 V or 15 V 400 Hz excitation, and feature isolated input and output. Accuracy is 2 arc-seconds. Standard resolutions are .0001°, .001°, 1° and 5°, with standard units 3½" full-rack. Optional half-rack mounting for 1° and 5° resolution models.

Model 530/20, 540/20 Broadband Resolver/ Synchro Simulator & Bridge

These broadband instruments operate over the frequency range from 50 Hz to 10 KHz, and provide accuracy to 10 arc-seconds. Their flat frequency vs. accuracy characteristic makes either unit an ideal choice for test facilities requiring maximum utility from all instruments. Both the Simulator and the Bridge provide selectable resolver-and-synchro-modes for all standard line-line voltages in a 5¼" high full-rack unit. Angle is displayed as a non-ambiguous in-line readout from 0° to 360°.

Model 532—Miniature Synchro Simulator

Model 532 is a miniature synchro simulator offering precision performance in a small panel-mounted unit suitable for production test, ground support and similar systems. Direct simulation of 11.8 V 400 Hz line-line synchro transmitters (CX) is provided, with dial reading in 30° segments plus 5° increments selectable by sealed thumb-wheel switches and accurate to 30 arc-seconds. A similarly packaged Resolver Simulator, Model 531, is also available. Units can be supplied with several options, including 90 V line-line output.

Series 530

Model 530/20, 540/20

Model 532

Series 540

Model 541/10

RTS-573

API-8025

RB-503, RB-504

Series 540—Resolver/Synchro Bridge

These bridges permit direct measurement of resolver an synchro transmitters. They feature a constant null gradien output voltage, isolated input and output, input impedanc over 500K, and 400 Hz accuracy of 2 arc seconds. Standar resolutions are .0001°, 1°, and 5°, and are provided in a 3½ full-rack panel unit. Optional half-rack mounting for 1 and 5° resolution models.

Model 541/10—Miniature Resolver Bridge

This Miniature Resolver Bridge is designed for panel-moun applications in production and field test equipment. It meas ures the angular position of 400 Hz resolver transmitter with an accuracy of 5 arc-seconds. Manual balance is b coarse and fine sealed thumbwheel switches, with readou in 45° segments plus 5° steps. A Miniature Synchro Bridg Model 542/10, is available in an identical package.

RTS-573

An integrated 400 Hz Resolver/Synchro Test Console fo complete resolver and synchro testing. Tests include Phas Shift, TR, Angular Accuracy, Electrical Zero, Phasin Total and Fundamental Nulls, Input Current.

Angle Position Indicators

High-speed performance 400 Hz servos for field test an production test measurement of synchro and resolver tran mitters. The half-rack API-8025 provides accuracy of 6 a minutes, repeatability of 30 arc seconds, and slew speed 25°/second with a digital readout display. Optional retran mit components, dual-mode, and two-speed operation. Al available for operational use, 2" and 3" diameter units.

Model 545—Automatic Angle Position Indicator

This instrument is offered with .01° resolution and accura or with .001° resolution and 10-second accuracy for all lin to-line voltages from 11.8 to 90 V at 400 Hz. The digit angle is both displayed and available in BCD format at t rear connectors. Remote or front-panel selection of resolv or synchro input, line-line voltage range and operating mo Operating modes selected as Track (the instrument contin ously follows the input data), Update (the instrument trac for 200 msec, then holds until receipt of another command and Auto-Update (repetitive track/hold sequences) with Variable Display Time of .5 to 3 seconds. Optional remo readout, analog d-c null output, data freeze command, sign frequencies 50 Hz to 4.8 KHz, multiplexed and multi-spe

AC Ratio Boxes

These precision inductive voltage dividers provide ide characteristics for use in ratiometric measurements. Th feature high input impedance, low output impedance, a accuracy over a wide frequency band. All units have dire in-line non-ambiguous readout and occupy a minimum panel space.

RB-503, RB-504—AC Ratio Boxes

For production test use, the RB-503 features 10 ppm acc racy from 50 Hz to 5 KHz, Zin 300K, Zo 3.5Ω, 0.35f vo input rating and a ratio range from 0 to 1.111110. RB-5 features 1 ppm accuracy from 300 Hz to 2 KHz, Zin 200 Zo 8.5Ω, 0.7f volts input rating, and a ratio range fr −0.111110 to +1.111110.

RB-503T, RB-504T—Inverting AC Ratio Boxes

Both models feature isolated input with full inversion ca ability. Ratio range is ±1.111110 with 0.35f volts input r ing. The accuracy is 10 ppm and 3 ppm respectively for ea model over the entire ratio range. Higher accuracy and inp voltage rating is included through a built-in direct-inp mode.

STRUMENTS, RATIO BOXES, AND ANGLE POSITION INDICATORS.

del 503/10—AC Ratio Box

broadband unit has a ratio range 0 to 1, operates from 50 Hz to 10 KHz with 10 ppm accuracy from 50 Hz to 3 KHz, and 100 ppm from 3 KHz to 10 KHz. This 3½" high rack unit is environmentally qualified for temperature, humidity, altitude, shock, and vibration.

521—Miniature Ratio Box

field use, this instrument features drip- and splash-proof construction while providing 10 ppm accuracy. Zin 25K, Zo 3.5Ω, 0.35f volts input rating.

ase Angle Voltmeters

se multifunctional instruments combine phase-sensitive es with the functions of a conventional a-c voltmeter rating over the range of 10 Hz to 100 KHz. They provide ct-reading voltage measurement of the total, fundamen- in-phase and quadrature components of an a-c signal to full-scale, as well as phase angle to 1°. They feature brated voltage ranges of 300 μV (or 1 mV) to 300 V full-scale, built-in or plug-in harmonic-rejection filters, in quadrature overload capability, and operate with a e range of reference voltages.

del 214A, 214B, 214C—Four-Frequency se Angle Voltmeter

production test use, these solid-state instruments pro- phase sensitive operation at 1, 2, 3, or 4 frequencies 30 to 20 KHz. Features include ±5% bandwidth without ustment, adjustable meter scaling for go/no-go applica- s, and 300 μV to 300 V full-scale ranges. Rapid field nge of frequency modules accomplished with simple one- trol recalibration procedure. Available as Model 214A isolation), 214B (reference isolation), and 214C (signal reference isolation). Optional rear connectors, 10 μV -scale range.

del 240, Model 245—Phase Angle Voltmeters

field support use, these transistorized Phase Angle Volt- ers are designed for operation at a specified frequency m 30 Hz to 20 KHz. Similar performance to the Series with operation at a fixed reference level. Optional d-c tmeter function.

-202—Phase Angle Voltmeter

e original Phase Angle Voltmeter designed for production t use, provides phase-sensitive operation at a single-spe- ed frequency 30 Hz to 10 KHz. Optional signal and/or rence isolation. Also available in 2- or 3-frequency del VM-204.

del 301A—Broadband Phase Angle Voltmeter

r production test and laboratory use, this broadband trument is designed for continuous phase sensitive opera- n from 10 Hz to 100 KHz with a phase angle accuracy of 5° from 30 Hz to 30 KHz. Harmonic rejection filters are ilable and simply plugged in behind the swinging meter el.

del 215C—Militarized Phase Angle Voltmeter

ovides over-all functions of and similar performance to e Model 214C Phase Angle Voltmeter in a configuration alified to MIL-T-21200, and designed for operation from to 75°C. Construction includes drip-proof front panel, oted toggle switches, panel meter per MIL-M-10304B, aled controls and RFI gaskets.

Model 212A, 212B, 212C—Transistorized Phase Angle Voltmeter

This solid-state instrument, successor to the famous VM-202, provides phase-sensitive measurement at a single pre-specified frequency from 30 Hz to 10 KHz with full-scale measurement from 300 μV to 300 V. Three basic models are available: Model 212A (no isolation), Model 212B (reference isolation), and Model 212C (signal and reference isolation).

Phase Sensitive Converters

PSC-419—Phase Sensitive AC/DC Converter

For automatic test systems, this programmable instrument converts 400 Hz signal components to high-level d-c with 0.1% linearity and 0.003% scale factor change from −40° to +75°C. Input sensitivity 10 mV full-scale for 10 vdc full-scale output with 100 msec response time. Output impedance 0.2Ω. Accessory panel available to provide rack mounting and manual input controls. Optional operation at other frequencies to 10 KHz.

Phase Sensitive Converter—Model 431

Designed as a building block for the GPATS (General Purpose Automatic Test System), this special purpose Phase Sensitive Converter measures total, fundamental, in-phase and quadrature voltages, and reads angles directly. It operates in multiple frequency bands from 60 Hz to 15 KHz.

DIGITAL PANEL METERS

series 2000

- 30 readings per second
- Automatic polarity
- Driven guard-shield, box-within-box construction
- High accuracy, ±.01%R±.01%FS
- Isolated inputs to BCD outputs, up to 500 volts common-mode
- 1000 MΩZ_{in}
- Overranging to 20,000 counts
- ± and overload indicators
- Operates 0° to 60°C
- Non-glare polaroid screen

model 20-S

- Small size — 4.50" x 5.75"
- High input impedance — 1000 megohms minimum
- Fast reading rate — up to 60 per second
- Wide operating temperature — 0°C to 50°C
- Zero stability — With Temp. ±1 digit 0-50°C
  Constant Temp. ±1 digit in 90 days
- Low price — under $100 at 100 level

The Model 20-S panel meter is a small, rugged, low-cost, non-blinking readout particularly suited for OEM users. It is stable and accurate over a wide-range of operating requirements.

Prior to shipment, all units are subjected to accelerated aging at elevated temperature to minimize or prevent failure in the field.

OEM users are invited to inquire concerning variations and special characteristics suited to your individual requirements.

Precision Devices and Equipment for Current and Power Measurement

WIDEBAND POWER MONITORING EQUIPMENT

4000 Series Power Monitoring Equipment is designed to measure average or peak power at frequencies from d.c. to Megahertz. Flat frequency response makes these units ideal for power measurements involving transients or non-sinusoidal waveforms as encountered in resistance welding, electrical discharge machines, rotating machines, inverters and other industrial applications. Meter displays of peak or average power is provided. Oscilloscope display of voltage, current or instantaneous power with 100 nanosecond risetime permits detailed analysis of system operation and efficiency determination.

WIDEBAND PULSE WATTMETER

5000 Series Wideband Wattmeters provide the unique capability of measuring pulse power involved in turn-on, conduction, and turn-off of switching transistors, silicon-controlled rectifiers and other solid state devices. The typical 30 nanosecond risetime and flat d.c. to Megahertz frequency response provides accurate measurements in circuits where 1 microsecond or less switching time is involved. Monitor output is available for oscilloscope display of instantaneous power, current or voltage.

WIDEBAND POWER MONITORS

600 Series Power Monitors provide economical units for power or current measurements where d.c., sinusoidal, non-sinusoidal or pulse power is delivered to a load. Currents as high as 1000 Amperes are handled with negligible circuit interaction due to use of isolated current transducers. Meter display of peak or average power is provided, as well as +1 to −1 volt output for oscilloscope monitoring of instaneous waveform.

WIDEBAND d.c. to Megahertz CURRENT MEASURING EQUIPMENT

1 Series current measuring units provide an output signal proportional to instantaneous current flowing through the transducer window. The d.c. to Megahertz response and ability to faithfully reproduce 1 microsecond transients provide an ideal way to monitor critical circuits without electrical connection and with minimum interaction caused by measurement. The panel meter provides display of direct current while the +1 to −1 volt output can be used for monitoring or control purposes with current flow in either direction.

MODEL	PEAK CURRENT AMPERES	METER RANGE AMPERES	OUTPUT-VOLTS
CM-30	30	0 - 30	0 - 1
CM-100	100	0 - 100	0 - 1
CM-200	200	0 - 200	0 - 1
CM-600	600	0 - 500	0 - 1
CM-1000	1000	0 - 1000	0 - 1

HALLTRON POWER COMPUTERS OR WATT TRANSDUCERS

The Halltron Power Computer provides a d.c. output signal proportional to the true power consumed by the load. Single and three phase units have fast response needed for sinusoidal or chopped waveforms and have an output which is electrically isolated from supply lines.

MODEL	APPLICATION	(Volts) VOLTAGE	(Ampere) CURRENT	(Millivolts) OUTPUT
PC-51	1ϕ 2 Wire	120	5	50 @ .5KW
PC-52	1ϕ 2 Wire	240	5	50 @ 1KW
PC-101	1ϕ 2 Wire	120	10	50 @ 1KW
PC-102	1ϕ 2 Wire	240	10	50 @ 2KW

Special units, for higher currents or higher voltages than listed in stock models, can be supplied for control applications.

HALLTRON d.c. to Kilohertz CURRENT TRANSDUCERS

These Halltron Current Transducers provide flat d.c. to 5 Kilohertz response and require no electrical connection to the circuit being monitored. The circuit isolation makes many measuring and control applications simple, especially where conductors are at high voltage with respect to measuring or control circuits.

Models with better than 1% linearity and temperature effects less than 1% are stock items in current ranges to 2000 Amperes. Special units for higher currents or split-core configuration can be supplied for specific requirements. Auxiliary amplifier-power supply units are available to provide 10 volt output when desired instead of 50 millivolt output of transducer alone.

HALLTRON TRUE PRODUCT MULTIPLIER

O.S.I.'s Halltron, true-product multipliers provide an electrical output which is the product of two input currents which may be ± d.c. or time-dependent. High linearity and low-noise properties insure optimum performance in critical circuit applications. All units are supplied in hermetically sealed packages with, in most cases, dual magnetic inputs so that series or parallel operation can be obtained to satisfy various input requirements.

MODEL	INPUT 1	INPUT 2	OUTPUT MILLIVOLTS
MC-101	25/50 ma.	250 ma.	250
MC-103	250/500 ma.	250 ma.	250
MC-105	1.25/2.5 A.	250 ma.	250
MC-107	7.0 A.	250 ma.	250

AMPERE-HOUR MONITORING EQUIPMENT

The A-H Series units provide bidirectional registration of charge and discharge in d.c. applications, thereby accurately indicating electrical energy consumed. 1% accuracy is mtaintained to current levels of 10,000 Amperes.

MODELS 103A, 104A, 105A and 106A

PRINCIPAL FEATURES

- Resolutions Greater Than 1 Part in 10^{12} Peak to Peak in One Second
- Direct Digital Readings of Frequency Difference of ±1 Part in 10^{12} for 1 Second Observation Time Using a Frequency Counter (Model 106A)
- Six Selectable Decade Stages of Error Multiplication of 10, 100, 1,000, 10,000, 100,000, and 1,000,000 (Model 106A)
- Built-in Frequency Discriminator Gives Analog Frequency Difference Indications on Front Panel Meter and External Chart Recorder
- Built-in Phase Detectors with Resolution Greater Than 0.3 Degree Peak to Peak at Equivalent Frequency of 1GHz
- Allows Quick Accurate Measurement of Both Short and Long Term Performance of Frequency Sources, Active and Passive Networks, etc.
- Can Be Used with Peripheral Equipment to Make An Extremely High Resolution, Low Noise, Very Wide Dynamic Range Spectrum Analyzer

The Parzen Frequency Comparators are advanced instruments based on well established error multiplication techniques and of proven design and performance. The basic units accept 1.0, 2.5, and 5.0 MHz signals in any combination. Other frequencies can be handled by adding the model MF Multiple Input Frequency option or using them in combination with the model 109 Wide Range Frequency Extender. By effectively multiplying the frequency difference between the two input signals, the Comparators provide an error expanded signal which can be fed directly to a counter for digital presentation and which is detected internally by a built in frequency discriminator and two built in phase detectors. The frequency discriminator provides a linear analog signal, proportional to the frequency difference between the signals, which is displayed on a calibrated front panel meter and which is also provided on the front panel for feeding to a strip chart recorder. The phase detectors of the compararto provide detailed information on the total frequency, phase, time and noise characteristics of the device being tested. The phase detector outputs can also be used for tracing specific sources of noise etc such as ac pickup, power supply hum, EMI, and low level oscillations. Finally they have a bandwidth of 3 KC allowing observation times as short as 0.3 ms.

APPLICATIONS Applications include

- Short-term and long-term stability measurements of frequency sources.
- Rapid alignment of frequency sources for maximum accuracy and stability.
- Rapid detailed analysis of total frequency, phase, time, and noise performance.
- Acquisition of useful information on noisy frequency sources.
- Stability and noise measurements of active and passive networks such as amplifiers frequency multipliers, dividers, mixers, and synthesizers.
- Rapid diagnosis and adjustment to improve performance of sources and networks.
- Extremely high resolution, low noise, very wide dynamic range spectrum analysis.

MODEL 109 WIDE RANGE FREQUENCY EXTENDER

MODEL 109 WIDE RANGE FREQUENCY EXTENDER

Used with Model 103A, 104A, 105A or 106A for 1 to 108 MHz inputs.

PRINCIPAL FEATURES

- Frequency comparison or calibration methods of operation.
- Accepts any frequency from 1 MHz to 108 MHz in comparison mode of operation and 0.6 to 220 MHz in calibration mode of operation.
- Resolution better than 1 part in 10^{11} peak-to-peak in 1 second.
- Allows short term phase stability of networks to be measured at any frequency from 1 to 108 MHz.
- Can be used with peripheral equipment to make an extremely high resolution, low noise, very wide dynamic range, wide tuning range, Spectrum Analyzer.
- Auxiliary unit for Parzen Frequency Comparators.

GENERAL DESCRIPTION

The Parzen Model 109 Wide Range Frequency Extender is a state-of-the-art instrument that expands the frequency coverage of Parzen Frequency Comparators. Now for the first time high-resolution comparison, short term phase and gain stability of networks, and frequency calibration measurements can be made at all frequencies between 1 and 108 MHz or 0.6 and 220 MHz depending on mode of operation used.

The Model 109 Extender can be used with any existing or newly purchased Parzen Research Model 103A, 104A, 105A, 106A, or Frequency Comparator. However, it is likely to be the most useful with the Model 104A for the majority of applications.

The Model 109 produces 1 MHz input signals for the Comparator. It utilizes a variable frequency local ocsillator (LO), which may be either the internal LO or any external unit of greater stability or purity. Complete phase-locking facilities and both aural and visual lock indications are provided, as well as flexible controls for the various methods of operation.

FREQUENCY COMPARISON

For frequency comparison measurements, either the internal LO or an external signal generator can be used. Both input signals must be nominally the same frequency. The LO is locked to the input in the following relationships:

Input Frequency	Intermediate Frequency (IF)	Band	LO Setting
Between 1 and 7 MHz	100 kHz	C & D	100 kHz lower than input frequency
Between 7 and 53 MHz	1 MHz	A & B	1 MHz lower than input frequency
Between 53 and 108 MHz	1 MHz	2XA	½ MHz lower than input frequency divided by 2

The LO lock beat output is provided for use in phase locking an external signal generator. Once lock is achieved either internally or externally, the frequency comparison measurement can be made immediately with the connected Comparator in the usual way. The frequency difference, Δf, is related to that indicated by the Comparator, as follows:

$$\frac{\Delta f}{F_{REF}} = [\text{Comparator indication expressed in parts in}]\frac{F_{IF}}{F_{REF}}$$

Thus, some error multiplication is effected by the Extender, and extending the resolution of the Comparator or allowing it to be used in its lower ranges. The practical resolution of this method is better than 1 part in 10^{11} peak-to-peak in 1 second.

FREQUENCY CALIBRATION

An external frequency synthesizer is required for frequency calibration of a test signal connected to F_{REF}. It is connected to the external LO input, with the output set for the same IF as above. There is no input to the Fx channel of the Extender. The F_{REF} output of the Extender is fed to the Fx input of the Comparator, and an external accurate 1, 2.5, or 5 MHz signal (such as from the frequency synthesizer) is fed to the F_{REF} input of the Comparator. The test signal can then be precisely calibrated to an accuracy determined by that of the frequency synthesizer, the accuracy of the signal fed to the F_{REF} input of the Comparator, and the capabilities of the Comparator.

ODEL 302 UNIVERSAL PRECISE CRYSTAL MEASURING SYSTEM

RINCIPAL FEATURES:

- State of the art instrument.
- Up to 1 part in 10^8 frequency ac-cracy.
- Up to 1 part in 10^9 frequency repro-cibility.
- Covers frequency range 500 kHz to 6 MHz.

GENERAL DESCRIPTION

The Parzen Model 302 Universal Precise Crystal Measuring System is a highly advanced, state-of-the-art instrument which, when used in conjunction with immitance bridges such as the Hewlett-Packard 803-A, General Radio 1606-A, 1606-B and 1602-B, and Wayne-Kerr B801 and B901, allows the precise measurement of the properties (i.e., impedance as a function of frequency) of quartz crystals of similar devices over the frequency range 500 kHz to 216 MHz. The system is of the single-frequency "servobridge" type and is based on the procedures described by E. Hafner in USAELRDL Technical Report E-1220.

The system is one in which the crystal unit or other device under test is used as a passive element in an impedance bridge. The system consists of a Master Oscillator, a superheterodyne receiver (i.e., coherent detector) whose local oscillator is phase locked to both the master oscillator and an internal frequency standard. In addition, it has provisions for additionally phase locking the master oscillator to the phase output of the receiver and hence to the bridge output, or operating the master oscillator in unlocked or swept modes. The wide dynamic range and high sensitivity of the instrument allows measurements to be made at powers of less than one fento watt. Bridges are not supplied with the instrument. All required operational controls and connectors are clearly marked and located on the front panel.

ODEL 154 and 155—OFFSET GENERATORS

RINCIPAL FEATURES:

- Automatic Conversion of One Time cale to Another, Such As A.1 to UT.2, ithout Affecting the Original Standard.
- Enables Comparison of Two 1 MHz ignals Offset Beyond a Frequency Com-arator's Frequency Range.
- Generates Precision Offsets from 0-050 Parts in 10^{-11} to 0-1050 Parts in 10^{-6} in Steps of 50 Parts.
- Short Term (1 Second) Stability of 1 'art in 10^{-10}.
- Provides 1 MHz and 100 KHz Outputs 'lus or Minus the Selected Offset.

GENERAL DESCRIPTION

State of the art instruments. The Parzen Models 154 and 155 Offset Generators are especially useful for time standard conversions. These precision instruments enable a laboratory to have access to all time scale standards without interruption of their basic time scale. These instruments provide an excellent method of calibration and measurement of narrow band filters, discriminators, sources, and investigation of phase-locked frequency control systems.

The Parzen Models 154 and 155 Offset Generators are completely Solid State and differ only in the offset selection Range. The 155 has an additional range of 10^{-11}. The Parzen Offset Generators automatically produce a stable output frequency that is offset by a precise amount from an input reference frequency. The amount of the offset can be fixed anywhere in the range from 0 to 1050 parts in 10^N, where N is selected. F_{OFFSET} **can be higher or lower than the input reference** frequency, F_{REF}.

The offset signal frequency is generated by a self-excited oscillator which is usually phase-locked to a stable frequency. This oscillator continuously covers the range from 0 to 10,500 Hz, which is equivalent to 0 to 1050 parts in 10^N. Three modes of operation are possible. The oscillator can be phase-locked to the internal source, it can be phase-locked to an externally supplied signal, or it can be used unlocked with moderate stability and accuracy.

The internal locking signal is derived by dividing down the input reference frequency. This provides 22 precise offsets, which can be dialed in, between 0 and 1050 parts in 10^N in 50-part steps.

An external locking signal is necessary only when an exact offset other than a multiple of 50 parts is required. The externally supplied frequency, in Hz, is equivalent to $10\triangle f$, and the amount of the offset is $10^N\triangle f$. Therefore, an external precision source of 1,300 Hz will produce an offset of exactly 130 parts in 10^N. The Generators will also lock on to harmonics of the externally supplied frequency.

TELEPHONE: (516) ED 4-3900

MODEL 113 — DIFFERENTIAL TIME COMPARATOR

(DUAL CHANNEL CONFIGURATION)

PRINCIPAL FEATURES:

- Low-cost high resolution instrument for long-term monitoring of Time and Frequency Difference.
- Unique differential feature enables precise measurements over a continually expandable range.
- Internal Stability Better than 1 part in 10^{13}.
- Recorder ranges down to ±5 nanoseconds full scale; self-calibration.
- 21 frequencies from 100 kHz to 10 MHz accepted in both inputs.
- Two Differential Time Comparators fit in one 3½ inch high cabinet.

FUNCTIONAL DESCRIPTION

The Parzen Model 113 Differential Time Comparator is an advanced solid-state instrument for indicating and recording long-term time and frequency difference between two (2) sources with maximum resolution better than 0.1 nanosecond. This permits determining frequency differences as small as 1 part in 10^{13} in about 15 minutes, and 1 part in 10^{10} in about a second. The Model 113 automatically accepts any of 21 frequencies from 100 kHz to 10 MHz in both channels, thus accommodating 231 possible combinations of input frequencies.

TECHNICAL SPECIFICATIONS

The Model 113 permits calibration of the output ranges, and eliminates the need for adjusting the phase of either source before the start of measurements. The total readings of the instrument at any instant, t_s, is equal to the sum of $t_1 + t_2 + t_3$ in nanoseconds, where t_1 and t_2 are the positions of the differential switches and t_3 is the reading on the external zero-centered chart recorder or voltmeter. When the range selector switch is in the X10 position, all nanosecond values are multiplied by 10.

The measurement procedure is as follows: First, the t_3 output is set to zero on the external recorder through the use of the differential switches t_1 and t_2 and the time zero set control. The initial reading of these switches has no meaning, but it must be noted. Second, the long-term change in the input phase is observed on the recorder. The accumulated time difference between the two input frequencies, $\triangle t$, is equal to the total reading, $t_s = (t_1 + t_2 + t_3)$, minus the initial reading. Third, when the recorder indicates near the end or off scale, the t_1 and t_2 switches are used to bring the reading back into the normal positive range; the locked zero set control is not touched. The new t_1 and t_2 positions must be noted. This last step can be repeated indefinitely.

The time difference, $\triangle t$, occurring between instant **a** and instant **b** can readily be determined as follows:

$$\triangle t = t_{sb} - t_{sa}, \text{ or}$$
$$\triangle t = (t_1 + t_2 + t_3)_b - (t_1 + t_2 + t_3)_a, \text{ in nanoseconds}$$

When the positions of the t_1 and t_2 switches have not been changed, then this calculation simply reduces to subtracting the meter reading at the end from the meter reading at the beginning of the observation period.

The frequency deviation, $\frac{\triangle f}{f}$, between the two sources for the time elapsed between **a** and **b** can be calculated as follows:

$$\frac{\triangle f}{f} = \frac{\triangle t \times 10^{9}}{T}$$

where T is the observation time in seconds and $\triangle t$ is the time difference in nanoseconds as calculated above between instant **a** and instant **b**.

MODEL 112 — TIME DIFFERENCE MONITOR

PRINCIPAL FEATURES:

- Digital readout of time difference between two frequency sources.
- Convenient observation time indication.
- High-resolution measurement technique.
- Skilled labor savings as a result of simple presentation of data.
- Unique "state-of-the-art" instrument.
- Accessory for Parzen Frequency Comparator.

GENERAL DESCRIPTION

The Model 112 Time Difference Monitor is an accessory equipment for use with Parzen Model 103A, 104A, 105A or 106A Frequency Comparators. These proven instruments offer an efficient technique for making long-term and extremely long-term measurements with high resolution. The Model 112 provides bi-directional digital readings of the total accumulated time differences between two precisely generated frequencies during timed monitoring periods.

The Monitor consists of a digital time difference indicator, a digital observation time indicator, associated controls, and completely solid-state circuitry. During the monitoring operation, the time difference indicator moves forward one digit for each unit of time gained, and reverses one digit for each unit of time lost, by the unknown frequency in comparison to the reference frequency. The unit of time difference is selected on the Frequency Comparator as 0.1 (with Models 104A, 105A or 106A), 1, 10, or 100 nanoseconds. This indicator can also be manually stepped in either direction. The observation time indicator counts tenths of minutes. Manual controls permit starting, stopping, and restarting the monitoring operation, and provisions are made for remote control of these functions or for synchronizing them with other events.

The E_x and E_y phase detector outputs of the Frequency Comparator are accepted directly by the Model 112, and the same signals are made available for an external oscilloscope, X-Y recorder, and/or dual-channel T-Y recorder. Time pulse outputs are provided for operating an external events counter, printer, or other equipment.

MODEL 091 — FREQUENCY COMPARATOR

PRINCIPAL FEATURES:

- Low Cost Precision Error Frequency Multiplication.
- Resolution of Frequency Difference Better Than ±1 Part in 10^9 for 1 Second Observation Time.
- 231 Input Frequency Combinations between 100 KHz to 10 MHz.
- Four Multiplication Ranges, 10^6, 10^7, 10^8 and 10^9.
- Input Frequency Tolerance ±¼%.
- Dual Channel, Interchangeable Inputs.
- Stability Better Than 1 Part in 10^{10} in 1 Second Observation Time.

GENERAL DESCRIPTION

The Parzen Model 091 Frequency Comparator is a high-quality frequency stability measuring instrument of proven design and performance. Circuitry and techniques are employed to provide high resolution, low noise, relatively wide bandwidth, and automatic acceptance of 2 frequencies in both inputs. The system is self-checking. Completely solid state, it utilizes silicon semi-conductors exclusively and embodies plug-in modular construction in a sturdy dual-purpose cabinet.

This simplified instrument is designed for quick, foolproof, and unambiguous measurements in standards rooms, on production lines and at field stations, as well as in development laboratories. Practical applications include aligning the time bases of frequency counters and time code generators with primary standards, measuring the frequencies of crystal oscillators at high resolution, checking the stability of frequency sources, and collecting data on the long-term drift in input signals.

The Frequency Comparator accepts 21 commonly used frequencies between 100 kHz and 10 MHz in both inputs; thus, it can compare 231 pairs of frequencies. The input frequencies handled are 100, 111.1, 125, 142.9, 166.7, 200, 250, 333.3, and 500 KHz, and 1, 1.5, 2, 2.5, 3, 4, 5, 6, 7, 8, 9, and 10 MHz, all ± ¼%. Each of these frequencies is automatically converted to the proper internal frequencies for further signal processing. No auxiliary equipment, switching, adjustments, or connection changes are required for different frequencies. The two input channels can be used interchangeably.

The outputs of the Frequency Comparator are fast rise time pulses which are ideally suited for digital events counters. The error-expanded frequency of 1 MHz ± M$\triangle$f is provided for display by a frequency counter. The maximum resolution of these direct readings in ±1 part in 10^{11} for a 100 second count, ±1 part in 10^{10} for 10 seconds, ±1 part in 10^9 for 1 second, etc. A separate audio frequency output of M$\triangle$f is furnished for higher resolution indications on a period counter. Maximum resolution of these readings is better than ±1 part in 10^{10} for 1 second and for 1 period.

PARZEN

A DIVISION OF
SKINNER INDUSTRIES INC.

48 URBAN AVE., WESTBURY, L.I., NEW YORK 11590
TELEPHONE: (516) ED 4-3900

MODEL AN/SRA-43 ANTENNA GROUP

PRINCIPAL FEATURES:

- Tunes frequency range 2 to 8 MHz in three bands.
- Meets the stringent requirements of MIL-E-16400 and MIL-S-901.
- Allows one vertical structure to serve as an antenna for many receivers.
- Can be operated in close proximity to high power transmitters without damage to the receiver.
- Built-in noise source to allow tuning of coupler to exact frequency when no signal is present.

GENERAL DESCRIPTION

Parzen's Antenna Group AN/SRA-43 is a shipboard antenna and remotely-controlled preselector covering the 2 to 8 mc frequency range. The Antenna Group is designed to be used with any communications receiver operating in this frequency range.

Parzen's Antenna Group rejects undesired signals outside its passband, presents an extremely small parasitic aperture to other antennas in the area, protects the connected receiver against damage from strong local signals over the operating range (including the frequency to which its passband is tuned), provides additional image rejection for the receiver, and reduces spurious radiation from the receiver.

Each Antenna Group consists of the following three units:

a. Antenna AS-1857/SRA-43.
b. Radio Frequency Tuner TN-438/SRA-43.
c. Antenna Control C-6828/SRA-43.

The Antenna is a short whip, which is tuned by the R. F. Tuner. The Tuner is remotely controlled by the Antenna Control unit. The Antenna and the R. F. Tuner are supplied as a combined watertight equipment designed for installation in a housed and heated space near the connected receiver. The Antenna Group does not include the receiver, the interconnecting cables, nor any brackets or other supporting structure that may be needed to mount the combined Antenna and R. F. Tuner equipment.

The complete antenna system consists of a grounded vertical structure on which the tuned whip is horizontally mounted. The grounded vertical structure is actually the antenna, and each tuned whip is the means of coupling between the antenna and one receiver. Each complete antenna system is tunable over the entire 2 to 8 mc frequency range. Antenna system performance is a function of the height of the vertical structure and of the actual mounting location.

MODEL AN/URM-115A FREQUENCY DEVIATION METER

PRINCIPAL FEATURES:

- Militarized version of the Model 104A Comparator.
- Four selectible decade stages of error multiplication to 10,000.
- Built-in strip chart recorder in conjunction with frequency discriminator gives analog frequency difference indications.
- Built-in oscilloscope in conjunction with sine and cosine phase detectors gives polar phase display with resolution to 0.3 degrees peak to peak at equivalent frequency of 1 GHZ.
- Meets full shipboard environmental specifications.

GENERAL DESCRIPTION

Parzen's Frequency Deviation Meter AN/URM-115A is a self-contained test equipment for measuring, monitoring, and recording the difference between two precisely-generated input frequencies with a resolution better than 2 parts per (pp) 10^{11} for a 1-second observation time. Noise is also displayed. This high-precision instrument has been developed to evaluate the performance of atomic and quartz crystal frequency standards, precise oscillators, and other frequency sources, as well as stable frequency multipliers, dividers, amplifiers, and related four-terminal networks.

MODEL 120 SERIES FREQUENCY DISTRIBUTION AMPLIFIERS AND SYSTEMS

- **Low noise — less than 1 part in 10^{12} degradation.**
- **Up to 40 isolated outputs.**
- **High isolation.**
- **10, 5, 1, and .1 MHz frequency outputs.**

HIGH RESOLUTION IN FREQUENCY AND TIME

Frequency Comparison Instruments The competence of the Company for developing highly reliable, state-of-the-art frequency control equipment has been demonstrated by the Parzen line of proprietary frequency comparators. Design and construction techniques used in these instruments have resulted in extremely stable, noise-free circuits which have relatively wide bandwidth. With these instruments, instantaneous frequency, phase, and noise characteristics can be displayed and analyzed, and the relative power spectrum of two similar sources can be obtained. Frequency comparators have been built to accept input frequencies from 100 kHz to 108 MHz, and to provide effective error multiplication factors of 1 to 1,000,000 (referred to 1 MHz) in decade steps.

Industry and the Government have accepted Parzen frequency comparators as the outstanding instruments available in this field. These units are now being used to measure the short-term and the long-term stability of atomic and crystal frequency standards throughout the world.

The development of high-resolution frequency comparators has not only produced needed instruments but has also created a convenient technique for evaluating circuitry under development. The high performance of other frequency control equipment built by Parzen is due in part to the use of the frequency comparators in investigating the noise properties of the multipliers, dividers, mixers, and amplifiers employed. Such four-terminal networks often deteriorate the actual stability of the frequency sources to a marked degree. A Parzen frequency comparator makes it possible to study the phase and frequency characteristics of these networks and to adjust them for minimum noise, independent of the basic oscillator or atomic standard.

Frequency Generation and Synthesis Equipments In this field, the Company has developed high-performance equipments for specific applications. As an example, a frequency synthesizer was built to accept the output of a cesium gas cell and to generate a 5.000,000 MHz signal with good short-term stability. A number of frequency control modules, which exhibit circuit stability greater than 1 picosecond per second, have also been furnished individually or as systems. Standard and custom-designed multipliers, dividers, mixers, and amplifiers of this type have been delivered to a number of users.

Several multiple-channel signal generators have also been delivered. Two such equipments consist of a group of closely spaced crystal oscillators feeding a common output. These sources have tight specifications on spillover from one channel to an adjacent channel. One equipment also includes digital control and monitoring of the oscillators and of the combined oscillator output signal.

Frequency offset generators and time scale converters of several different types have been developed by Parzen. These self-contained systems generate stable output frequencies which are offset by selectable precise fractional amounts from frequency standard inputs. Completely electronic, they have superior short-term stability and low noise characteristics.

SIGNAL CONDITIONERS

The SG-11 series of Transducer Bridge Signal Conditioning Units are self-contained plug-in instruments designed to be used with various strain-gage transducers. Each consists of a highly regulated, adjustable power supply and the balance, calibration and monitoring circuitry to be used with four, six and eight wire shielded systems. The power supply circuit exhibits very high temperature and time stability and provides line and load regulation of 0.01%; excitation voltage is continuously adjustable from 0 to 16 volts at 0 to 150 mA. The all-silicon transistor circuitry features a self-restoring current limit circuit. These units can be wired for constant-current operation.

Extreme care has been taken to provide very high isolation to line — less than 0.03 pF coupling capacitance from power line to D.C. output — so that the instrument's performance approximates that of battery operation.

The BALANCE, CALIBRATION, and E. V. COARSE and FINE adjust controls are on the panel for easy adjustment and are all ten-turn potentiometers of very high resolution. A single shunt is used for calibration.

Two types of enclosures are available: a relay-rack mounting enclosure that permits the mounting of eight units side-by-side in a 19-inch rack and a portable enclosure, accepting a single plug-in unit. A plug-in power supply, only, is also available.

MODEL SG-11 PLUG-IN UNIT (eight shown in rack) **$187.50** each
MODEL SG-11-R RELAY-RACK MOUNTING ENCLOSURE (as shown) with solder terminals only **$90.00** each
MODEL SG-11-RC RELAY-RACK MOUNTING ENCLOSURE with MS connectors (mating connectors included) **$250.00** each
MODEL SG-11-P PORTABLE ENCLOSURE (as shown) **$39.50** each

Write for Bulletin SG and Application Notes.
Models for conditioning other transducers are also available.

The Digital Temperature Indicator, Model DTI-1 series, accepts signals from various thermocouples, amplifies and linearizes these signals, and displays temperature in digital form. BCD outputs are available for external printers or comparators. Bulletin DTI.

ALPHA-NUMERIC DISPLAYS

We design and build a wide variety of data displays for commercial and industrial use. Digits up to 20 in. high — readable 500 feet away — with solid state control circuitry. Ask for quotation to meet your display requirements.

DATA LOGGERS

The Model DL-2 Data Logger is a complete data acquisition system a compact, portable package. It will scan up to 100 differential signa digitize them, and print out their values to four places, also printi range, polarity and channel number. All data is displayed in the fo of ⅛ inch high characters on the printer wheels.

Data Logger with 10 Channels $1995.
Data Logger with 100 Channels $2445.

PPM offers custom systems and Systems Components for data acqui tion and process control. PPM Data Acquisition Systems will acce as many as 1000 individual signals; these signals are scanned, di tized, and recorded in printed form or on punched or magnetic ta Alarm outputs are available for signals falling outside of pres limits. For systems applications we offer several Systems Co ponents, such as:

COUPLERS to drive various output devices such as card paper tape punches, magnetic tape recorders, P (or other) printers, and electric typewriters.

PRINTERS to accept most data codes are available up to columns wide (see Data Logger above). Bulletin D

COMPARATORS to provide GO - NO GO comparison between digi data and preset limits or between two sets of digi data.

SCANNERS reed relay and low level, are available with a wi choice of options. These include programming p boards, analog channel output, and others. Bulle SN.

Price (100 channel 2-pole reed-relay scanner)..$995.

↑ **DIGITAL CLOCK**
Modular construction affords flexibility in meeting your special requiremens. Options, include crystal oscillator time base, additional digits, and time interval output. Bulletin DC.
Price (6 Digit DC-4).....**$650.00**

ELECTRONIC PROGRAMMER →
The Model EP-1 provides relay contact operation at programmed start and stop times. Bulletin EP.

All priced equipment available from stock.

ultra high resistance standards

Meet the "MEGATROMETER"... for Measuring Resistance to 75,000 Million Megohms

The "Megatrometer" is a self-contained test device capable of measuring resistances from 14,000 ohms to 7.5 x 10^{16} ohms. The test potential is continuously variable with ranges of 0-1,000 VDC or 0-1,500 VDC. It is accurate enough (±3% upper half scale) for general laboratory and engineering development, yet simple and rugged enough for use in production testing.

The unique circuitry of the "Megatrometer" employs an extremely small grid current which permits the determination of ultra-high resistance measurements. It is completely portable, no external AC supply is required as the unit uses mercury "D" cells and BC batteries. Battery life under normal usage is approximately six months. The "Megatrometer" is safe under all operating conditions, and can not be damaged by short circuits or severe mechanical shock.

Accuracy: ±3% upper ½ scale. (Higher accuracies obtainable by using front panel calibration adjustment and plug-in resistor standards.)

Calibration: Built-in 10 Megohm 0.2% calibration standard. Push button on front panel permits fast, easy calibration.

Meters: Precision, fan-type with mirror scale.

Power Supply: 8 mercury "D" cells. (The internal transistorized power supply impedance at 1,000 volts is sufficiently high to preclude the possibility of shock so common to low impedance-type power supplies.)

Guard Circuit: A guard ring network intercepts all leakage current flowing across the electrode insulators and by-passes it around the electrometer circuit.

Dimensions: 21½" W x 13⅛" H x 15⅛" D in cabinet. Rack panel can be removed and mounted in a standard 19" relay rack.

Weight: Net approx. 40 lbs., shipping approx. 45 lbs.

Prices: Model No. 710 — $ 960. FOB Southampton, Pa.
Model No. 710H — $1,500. " "
Model No. 710V — $2,100. " "

Options: Volume Resistivity Jig — Plug-in design for rapid comparative measurements of resins, thin tapes, etc. up to 7.5 x 10^{17} ohms/cm³. Tests can be made in ten seconds. Dimensions: 5" x 2" x 2¼" . . . $85. **Extension Cables**—Dual, 6-ft., Teflon-insulated cables terminating in Faraday boxes at each end . . . $98.

SPECIFICATIONS:

Resistance & Test Potential Ranges

Model No.	Resistance Range	Test Potential
710	14,000Ω to 5 x 10^{15}	0-1,000 Volts, DC
710H	140,000Ω to 5 x 10^{16}	0-1,000 Volts, DC
710V	140,000Ω to 7.5 x 10^{16}	0-1,500 Volts, DC

Measurement Range for Various Test Potentials:

VOLTAGE	RANGE IN OHMS		
	710	710 H	710 V
3	14K – 5 x 10^{12}	140K – 5 x 10^{13}	140K – 5 x 10^{13}
10	50K – 5 x 10^{13}	500K – 5 x 10^{14}	500K – 5 x 10^{14}
25	4 x 10^{5} – 1.2 x 10^{14}	4 x 10^{7} – 1.2 x 10^{15}	4 x 10^{7} – 1.2 x 10^{15}
50	5 x 10^{6} – 2.5 x 10^{14}	5 x 10^{7} – 2.5 x 10^{15}	5 x 10^{7} – 2.5 x 10^{15}
100	1 x 10^{7} – 5 x 10^{14}	1 x 10^{8} – 5 x 10^{15}	1 x 10^{8} – 5 x 10^{15}
250-1000	2 x 10^{7} – 5 x 10^{15}	2 x 10^{8} – 5 x 10^{16}	2 x 10^{8} – 5 x 10^{16}
1500	–	–	2 x 10^{8} – 7.5 x 10^{16}

RESISTOR STANDARDS Certified to 0.2%

Each Resistor Standard is the culmination of months of meticulous processing, ageing cycles, measured, labeled, stored, shelf aged and measured again. This process is repeated until stability in terms of long term drift is less than 0.2% during the first year.

Resistors are mounted in a specially designed Faraday Box which plugs into the terminals of the "Megatrometer," Standard Resistance Bridge or with special mounting for use with compatible instruments. Teflon insulation is used exclusively and surface leakages are virtually eliminated through a special silicone treatment.

Three basic types of Certified Resistance Standards in the ultra-high resistance range of 10 Megohms to 10,000,000 Megohms are available:

1). **Reference Series** — with resistance values selected to within 10% of listed values, measured to within 0.1%, and certified to within 1%.

2). **Precision Series** — with resistance values selected to within 10% of listed values, measured to within 0.02%, and certified to within 0.2%.

3). **Exact Series** — with resistance values selected to within 1% of listed values, measured to within 0.02%, and certified to within 0.2%.

Temperature Coefficient: 10 Megohm units approx. 15PPM/°F; high Megohms approx. 0.2%/°F. The Precision and Exact Series supplied with temp./resistance curves.

Stability: The greatest portion of long term drift occurs during the first year after delivery — less than 0.2% for high Megohm units. Recalibration and recertification is recommended. Use Penn Airborne complete calibration facilities for prompt service.

Leakage: Teflon insulation employed and a guard terminal is used which connects to the guard ring electrode of a Megatrometer or Bridge.

Certification: Reference Series resistors are certified to within 1%. The resistor's temperature coefficient is supplied on the certificate. Precision and Exact Series units are certified to within 0.2%, and a certificate plus a temp./resistance curve are furnished with each unit.

Dimensions: 5" W x 2¼" H x 2" D, with banana plugs extending 1" beyond the 2" dimension.

Standard Mounting:

Special Mounting: Consult Factory.

Weight: Shipping approx. ¾ pound per unit.

SPECIFICATIONS:

Resistance Values Available & Prices:

RESISTANCE IN MEGOHMS*	UNIT PRICE		
	REFERENCE	PRECISION	EXACT
10	$ —	$ 72.00	$115.00
100	34.00	98.00	126.00
1,000	36.50	110.00	139.00
10,000	42.50	117.00	148.00
100,000	49.00	165.00	198.00
1,000,000	58.00	—	—
10,000,000	72.00	—	—

Voltage Coefficient: Approx. 0.001%/volt. The precise coefficient is given for each resistor of the Precision and Exact Series.

INDUSTRIAL HIGHWAY • SOUTHAMPTON, PA. 18966 • PHONE: (215) 355-3400

FORMERLY MANUFACTURED BY MID-EASTERN ELECTRONICS, INC.

PRECISION STANDARDS: State-of-the-art Instrumentation

Differential Voltmeters

Offer extreme accuracy and stability over a wide measurement range.
Model SS 1002 (AC-DC)
Accuracy 0.001% of reading, 0 to 1100 VDC; AC accuracy 0.05% of reading
Null sensitivity . . . guarded ultra sensitive 10μV full scale
Resolution 7 digits of readout resolution
5 instruments in one: Differential Voltmeter, Decade Voltage Divider, Ratiometer, Electronic Null Detector, Precision Calibrated Reference Source. **Price $1650.**

SS 1002 (one of 10 models)

Wheatstone Bridges

Unique line of "3 in one" units combines an all transistorized chopper, stabilized readout amplifier and adjustable bridge voltage supply. Compact, light weight, ultra sensitive and accurate. Model WB 200B can also be used as a resistance comparator.
Accuracy 0.005% of reading
Range 0 to 110 megohms in 7 ranges
Sensitivity to Null Detector 10μV
Resolution 6 digits **Price $950.**

WB 200B (one of 3 models)

Precision DC Voltage Calibrators

Ideally suited as a calibration source to check the operation and calibration of Digital and Differential Voltmeters. Extreme accuracy and stability achieved through the use of an ultra sensitive zener reference supply, precision highly stable silicon oil filled wire wound resistors and a high gain wide band ultra stable amplifier. Model 472A lightweight portable, solid state unit.
Accuracy 0.0025% of setting . . better than 0.05μV resolution . . adjustable in 2 ranges 0 to 11VDC and 0 to 110 MV output at 0-20 MA output current. Short circuit proof. Excellent for testing operational amplifiers and A to D converters. **Price $950.**

472A (one of 4 models)

PSC 100 Series DC Laboratory Power Sources

(Solid State Silicon)

High quality line which provides useful features not found in many competitive supplies in this price range. All units feature automatic crossover from voltage-to-current and current-to-voltage regulation with complete protection for overloads and short circuits. Low noise and drift. Front panel meter indicates voltage and current. Concentric fine and course controls for voltage and current . . remote voltage sense. All silicon construction. **Price $169.00** for Single Module 101, **$269.00** for Double Module 106.

Model 101 (one of 5 models)

Double Module 106 (one of 10 models)

PRESTON SCIENTIFIC also manufactures Instrumentation Amplifiers and Oscillators. See EEM Section 1100 Page 1348 . . . Analog-to-Digital Converters and Multiplexers. See EEM Section 2000 Page 591. For the location of your nearest PRESTON representative refer to the Yellow Section.

PRECISION INSTRUMENTS FOR ENGINEERING • DEVELOPMENT • RESEARCH

Lock-In Amplifiers: P.A.R. manufactures a full line of Lock-In Amplifiers which measure changes in amplitude or phase of coherent signals buried in noise. Input signal to the system is modulated at some reference frequency and phase-sensitive detection techniques are used to correlate the detected signal against the reference signal. Instruments are available with a minimum equivalent noise bandwidth as small as .00125 Hz. The maximum frequency range of PAR™ Lock-In Amplifiers extends from 1.5 Hz to 150 kHz. Maximum sensitivity is as high as one nanovolt full scale. Accessories include low-noise preamplifiers, light choppers, photomultiplier housings and power supplies. Prices range from $995 to $2,700.

Signal Averagers: Two types of signal averagers are available from P.A.R. Boxcar Integrators extract pulses as small as 10 nanoseconds in duration from noise. Complete waveforms may be observed by automatic scanning of single time gate across repetitive signal. Waveform Eductors™ utilize fast analog techniques to provide a 100 channel signal averaging capability. Digital interface accessories are available to permit operation on signals of low repetition rates, and to provide interconnection with digital read-out and data processing equipment. Prices range from $2,150 to $4,350.

Correlation Function Computers: Perform autocorrelation to separate unknown signals from noise and crosscorrelation to determine degree of conformity between two signals. A combination of analog and digital techniques are utilized to simultaneously compute 100 points of the correlation function and provide real-time analysis. Delay ranges (or computation periods) extend from 50 microseconds to 207.5 seconds. Frequency range is from dc to 1 MHz. Prices range from $6,950 to $8,950.

Fourier Analyzer: Extends the usefulness of Correlation Function Computers by transforming the correlation function from the time domain into the frequency domain to provide power density spectrum. The autocorrelation function is transformed into power density amplitude versus frequency and the crosscorrelation is resolved into the amplitude of cross spectral density plus phase angle as a function of frequency. Price is $3,250.

Tuned Amplifier/Oscillator: Combination Wave Analyzer, Distortion Analyzer, Low-Distortion Oscillator and Low-Noise Preamplifier. Frequency range is 1 Hz to 110 kHz with Q adjustable from 1 to 100 over the complete frequency range. Gain is continuously variable to 80 dB. Price is $1,495.

Preamplifiers: Extremely low-noise amplification for use ahead of other signal processing instruments or as general purpose instruments. The frequency range covered is from 1 Hz to 1 MHz with gains ranging to 10^4. Various input impedances are available. Models available provide transformer coupled input, high impedance inputs for photomultipliers, built-in adjustable high pass and low pass filters, and differential input capabilities. They are available in many configurations; battery-powered or line-operated; freestanding or modular. Prices range from $300 to $795.

RIM: Research Instrument Modules offer ease of assembly of signal processing instruments for general engineering applications. More than 20 modules are available: Lock-In Amplifier, Selective Amplifier, Preamplifiers, Variable Frequency Light Chopper, High Voltage Photomultiplier Power Supply, Four-Quadrant Analog Multiplier, Operational Amplifier, Power Amplifier, DC Photometer. All modules are designed in accord with specifications developed by the AEC for Nuclear Instrumentation Modules; thus the flexibility of a standardized modular instrument system previously available only to nuclear researchers has been extended to engineers and scientists in other fields of activity. Prices range from $390 to $1,195.

• WAVE AND SPECTRUM ANALYZERS

Model 303
WAVE AND SPECTRUM ANALYZER

quency range: 30 Hz to 100 KHz, semi-log frequency l. **Bandpasses:** 10, 30, 100 and 1000 Hz at —3 db (100 and 0 Hz bandwidths flat topped). **Sensitivity:** 100 μV to 300 FS. **Price:** $1700.

Model 2156
WAVE AND SPECTRUM ANALYZER

nilar to Model 303 except: **Frequency range:** 10 Hz to 30 z. **Bandpasses:** 3, 10, 30, 300 Hz. **Price:** $2375.

Model 2223
WAVE AND SPECTRUM ANALYZER

milar to Model 303 except: **Frequency range:** 10 Hz to) KHz. **Bandpasses:** 10, 100, 750, 1000 Hz. **Price:** $3525.

PE 1110-1 SWEEP DRIVE ACCESSORY MODELS 303, 2156 AND 2223

sily attached. Drives main tuning dial at 1.6 or 0.25 RPM. l stops included. **Price:** $75.00.

Model 304-TD
LOW FREQUENCY TRACKING WAVE AND SPECTRUM ANALYZER

equency range: 1 Hz to 5 KHz. **Frequency readout:** 5 place ctronic digital display. **Bandpasses:** Flat-topped, 1, 10, d 100 Hz at —3 db. **Skirt selectivity:** 24 db per ½ band-dth. **Sensitivity:** 30 μV to 300 V, FS. **Tuning:** Electronic, six lectable modes: manual, manual plus AFC, automatic eep, tracking, search and track, external. **Outputs:** BFO, stored signal, sample of automatic sweep, analogs of ter reading and frequency setting, phase outputs for ase plot. Built-in master-slave capability for multi-annel analyzer systems. **Price:** $3575.

Model 304-T
me as Model 304-TD except with 5000 division linear quency dial in place of electronic display. **Price:** $3025.

Model 304
me as Model 304-T except without AFC, tracking, or ster-slave capabilities. **Price:** $2700.

Model 305
TRACKING WAVE AND SPECTRUM ANALYZER

Similar to Model 304-TD except: **Frequency range:** 10 Hz to 50 KHz, 5000 division linear frequency dial. **Bandpasses:** 10, 100, and 1000 Hz. **Price:** $2800.

Model 305-D
Same as Model 305 except 5 place electronic digital frequency readout instead of frequency dial. **Price:** $3350.

Model 1304
SLAVE ANALYZER AND PHASEMETER

For use with Model 304-T or 304-TD in multi-channel phase locked analyzer systems. The Model 1304 has a built-in phasemeter but no tuning controls. Mechanical impedance and transfer function analysis is simplified. Bandwidths and sensitivity are the same as for the Model 304-TD. **Price:** $2050.

Model 1305
Similar to Model 1304, but for use with Model 305 or 305-D. **Price:** $2050.

Model 3304
CROSS SPECTRAL DENSITY ANALYZER

For use with the Models 304T and 1304 for computing cross spectral density. Values of Cxy, Qxy, and Gxy are presented on front panel meters. **Price:** $1800.

Model 3305
Similar to Model 3304, but for use with Models 305 and 1305. **Price:** $1800.

Model 350
HIGH FREQUENCY WAVE ANALYZER

Frequency range: 10 KHz to 10 MHz. **Frequency readout:** 5 place electronic digital display. **Bandpasses:** 4 KHz and 40 KHz at —3 db. **Sensitivity:** 10 μV to 10V, continuously variable precision capacitive attenuator with input overload indicator. **Outputs:** BFO, rectified signal envelope, and meter analog. **Price:** $2495.

All prices shown are F.O.B. Whippany, N. J. Prices and specifications subject to change without notice.

- TRANSISTOR & DIODE NOISE ANALYZERS
- INTEGRATED CIRCUIT NOISE ANALYZER
- R.F. NOISE ANALYZERS

Model 2283 -2281

INTEGRATED CIRCUIT NOISE ANALYZER

This extremely versatile noise measuring system was designed primarily for measuring noise in linear IC's and Op Amps. **Bias voltages:** plus and minus 12V fixed, plus and minus 0 to 30V independently variable at 100 ma. **Noise spectral density:** 3 to 3000 nanovolts. **Filter frequencies:** 10 and 100 Hz, 1, 10, and 100 KHz measured simultaneously.
Price: Model 2283 Control Unit $1600.
Model 2181 Filter Unit $2500.

Model 2173C -2181

TRANSISTOR NOISE ANALYZER

The most versatile unit available. Measures noise current and voltage at 10 and 100 Hz, 1, 10, and 100 KHz simultaneously. **Noise spectral density range:** 3 to 3000 nanovolts FS. **Base resistance range:** 0, 500, 1K, 10K, 100K, and 1M ohms plus external position. **Collector voltage range:** 0.3 to 60 volts. **Collector current range:** 0.3 μa to 30 ma. Also measures FET's. **Price:** $4995.

Model 310

TRANSISTOR NOISE ANALYZER

Measures noise current and voltage at 100 Hz, 1 KHz and 10 KHz as well as I_{cbo}, I_{ebo} and beta. **Noise spectral density range:** 0.01 to 3 μV, FS.1 to 300 pa, FS. **Collector Current range:** 0.05 to 30 ma. **Collector voltage range:** 0.1 to 30 V. **Base resistance range:** 0, 500, 1K, 10K, plus external position. **Price:** $2725.

Model 311

Similar to above, except that collector current range is from 5 to 1000 μa for noise measurement in low-collector-current devices. Measures Gm instead of beta. Also measures FET's.
Price: $2725

Model 51

TRANSISTOR NOISE TEST

Measures broadband noise figure directly in db. **Noise ba width:** 15.7 KHz (—3 db at 10 Hz and 10 KHz). **Noise fig range:** 0 to 62 db. **Collector voltage range;** ± 3 to 30 vo **Collector current range:** 10 μa to 1 ma. **Base resista range:** 50, 500, 1K, 10K ohms plus external position. A measures FET's. **Price:** $1

Model 3

DIODE NOISE ANALY

Measures noise in back-biased semi-conductor diodes 10 Hz and 1 KHz simultaneously. **Noise spectral den range:** 0.03 μV to 1 mV. **Test Voltage:** 0 to 500 V, continuo variable. **Test Current:** 0 to 100 ma continuously varia Internally supplied ramp automatically sweeps test curr and/or voltage within maximum ratings. A wide variet outputs for data logging, external monitoring, actuat external equipment, etc. **Price:** $3

Model 3

R.F. TRANSIS NOISE ANALY

Measures noise figure directly of transistors and FE at radio frequencies. Plug-in heads available for frequencies between 1 MHz and 60 MHz. **Noise figure ran** 0 to 40 db. **Base resistance range:** 50, 100, 200, 500, 1K, 5K ohms. **Collector voltage range:** ± 1 to 30 volts. **Collec current range:** 30 μa to 30 ma.
Price: $2

Model 13

MODEL 1340 TRANSISTOR TEST HE FOR USE WITH MODEL

1340 — 1 MHz — 10.7 MHz **Price:** $1
1340 — 2 MHz — 45 MHz — 60 MHz **Price** $1

Model 13

LINEAR I.C. TEST H

Measures noise in integrated circuits at 10.7 MHz.
Price: $1

All prices shown are F.O.B. Whippany, N. J. Prices and specifications subject to change without notice.

UTOMATIC RESISTOR NOISE TEST SYSTEM

utomatically measures resistance to 0.1%, com- utes and applies rated power, and measures oise Voltage or Noise Index in 1 second test ycle. Sequentially measures up to 20 different esistors on thick or thin film chips. Digital panel splays and BCD outputs of readings. **Range:**) ohms to 1 megohm.

EMI-AUTOMATIC TRANSISTOR NOISE ANALYZER

leasures Noise Voltage or Noise Figure at up to x spot frequencies, 10Hz to 1MHz sequentially. ast test cycle. Front panel programming and igital displays of readings, plus BCD outputs. May e fully automated.

UTO-RANGING INSTRUMENTATION AMPLIFIER

imilar to Model 2220 but with gain ranging auto- natically from 78 to 0 db. Front panel electronic igital display of gain setting plus rear BCD output.

UTO-RANGING LOG OUTPUT WAVE ANALYZERS

imilar to Model 304-305 series but with gain auto- natically ranging over 50 db. Log or linear output eading. Overall dynamic range 120 db. Front panel ndication of gain setting plus rear BCD output.

UTOMATIC LINEAR IC TEST SYSTEM

imilar to Model 2310 but for high-speed noise esting of linear IC's.

Model 315

RESISTOR NOISE TEST SET

Measures noise in resistors in conformance with specifications recommended by NBS and Method 308 of MIL STD 202B. **Test-resistor range:** 10Ω to 22 meg Ω. **Measurement range:** 0.6 μV in a decade to 1000 μV in a decade. **Outputs:** Sample of noise voltage; analogs of meter readings. External cable supplied for remote location of test jig.

Price: $2375.

Model 2136 RESISTOR NOISE TEST SET

Similar to above, but measures resistors down to 10 Ω. **Price:** $2550.

Special Instruments and Systems

Quan-Tech manufactures a great many "specials", ranging from one unit only to production quantities on an OEM basis. We can supply not only automatic measuring systems, but the automatic component handling equipment to go with them. We will assume system responsibility and are prepared to interface our systems with computers and other data programming, handling, and storage equipment. Your inquiry will receive a prompt reply.

All prices shown are F.O.B. Whippany, N. J. Prices and specifications subject to change without notice.

Quan-Tech
Division of KMS INDUSTRIES, INC.

- SOLID STATE AMPLIFIERS
- AMPLITUDE DISTRIBUTION ANALYZER
- RANDOM NOISE GENERATOR

Model 318

IMPULSE DISTRIBUTION ANALYZER

Determines amplitude & width of random or repetitive pulses, and stores the number of times that pulses occur within pre-selected amplitude or width ranges. 4 input channels, 4 amplitude threshold level controls, 3 adjustable time gates and 4 memory banks. Sampling time is selectable. **Frequency Response:** Dc to 15 MHz. **Amplitude Threshold sensitivity:** −10dBm to −60dBm, adjustable each channel, positive and negative inputs. **Input Impedance:** 75Ω, 135Ω, 600Ω switch selected. **Signal width Analysis:** 100 nanosecs to 99.9 millisecs in 4 decade ranges. Adjustable width thresholds $0\text{-}t_1$; $0\text{-}t_2$; $0\text{-}t_3$; $0\text{-}\infty$. **Sampling times:** 1 sec; 1 min; 1 hr; manual timing, Ext. program. **Data Readout:** 4 digit visual; BCD printer output. **Price:** $4,500.

Model 206

SELECTABLE GAIN AC AMPLIFIER

Bandwidth: 1 Hz to 100 KHz (within 0.5 db); — 3 db at 500 K **Typical noise spectral density:** 5 x 10—9 V and 3 x 10—12 A 1 KHz. **Gain:** 10, 100, & 1000, selectable at front panel; **Pow** 105-125 V AC or optional self-contained battery pack (automa cally recharging). **Price:** $200. Batteries $35.

Model 222

INSTRUMENTATIO AMPLIFIER

Modular amplifiers mount 8 units in a 7" rack panel. **Voltage ga** 0 to 80 db in 5 db steps. **Controlled frequency characteristi** (selected by plug-in cards) voltage gain flat 10 Hz to 100 K or 10 Hz to 20 KHz, rising 3 db/octave 10 Hz to 100 KHz 6 db/octave 10 Hz to 20 KHz. **Price:** $590

*DIGITAL OUTPUTS AVAILABLE

Model 317

AMPLITUDE DISTRIBUTION ANALYZER

Determines amplitude-probability distribution of random signals. **Amplifier response:** 3 db down at approx. 12 Hz and 1 MHz; **Switching rate:** 5 MHz. **Amplitude ranges:** 100%, 10%, 1% FS; Normal or "inverted" operation; provision for external sweep of level. **Price:** $495.

Model 317B

PROBABILITY DENSITY ANALYZER

Measures manually or plots automatically amplitude probability density or cumulative probability functions of random, complex, and repetitive signals. **Frequency Range:** DC or 10 Hz to 1.75 MHz. **Sweep:** −3 sigma to +3 sigma, automatic or manual. Gated clock pulse for low probability density. **Price:** $990.

Model 42

RANDOM NOISE GENERATOR

Stable "white" noise output having true gaussian amplitude d tribution. **Frequency range:** DC to 100 KHz; **Output spectral d sity:** 0.01 to 1000 μV, continuously variable, calibrated; **DC offs** less than 10 mV at max. output. **Price:** $700

Model 42

RANDOM NOISE GENERATOR

Similar to Model 420 but covering higher frequencies. **Frequen Range:** 10 KHz to 12.5 MHz flat ±0.5 db. **Output Spectral Densit** .02 to 300 μV, continuously variable, calibrated, into 75 ohm (1.34V RMS maximum for full bandwidth) **Price:** $1100.

All prices shown are F.O.B. Whippany, N. J. Prices and specifications subject to change without notice.

RF COMMUNICATIONS, INC.

ELECTRONIC INSTRUMENTATION OPERATION

80 MHz SYNTHESIZED GENERATOR/SWEEPER

MODEL RF-808

$2980

- 50 KHz to 80 MHz
- Stability 5 PP 10^9/Day
- 0.1 μV to 10V into 50 ohms
- AM, FM, or Pulse Modulation
- Manual and Automatic Sweep
- Fully Programmable
- Low Spurious and Harmonics
- All Solid State

The RF-808 Signal Generator is a synthesizer and sweeper in addition to a standard signal generator covering .05 to 80 mhz in 1 khz steps with a vernier settable to 1 hz. The unit features remote programmability, digital frequency setting, high signal power output, FM, AM, pulse, automatic sweep, and manual sweep.

The RF-808 has digital synthesizer performance, yet retains the manual and vernier tuning and low spurious output of conventional signal generators. Applications include automated test systems where frequency, amplitude, and modulation must be computer controlled; general purpose lab use where high stability, digital or analog tuning, sweep, and modulation versatility are needed; receiver and communication system testing from ultrasonic up into VHF ranges. The unit is intended for bench use, but a standard rack panel adapter is available using only 5¼ inches of rack space.

80 MHz WIDEBAND RF POWER AMPLIFIER

The RF-805 is a solid state amplifier, broadband from .05 to 80 mhz, producing ten watts with −30 db harmonic and intermodulation distortion, lower distortion at lower output levels. Gain is 47 db minimum, constant within 1 db. Full output is developed with less than 0.1 volt at the 50 ohm input. Accurate output metering and overload protection is provided.

The RF-805 will raise the power of most manual and swept tuned signal generators extending their versatility. Receiver testing, wattmeter calibration, antenna testing, RFI testing, attenuator measurements, and filter and component testing will be aided with this equipment. Optional rack mounting uses 5¼" rack height.

MODEL RF-805

- 10 Watts Output into 50Ω
- 0.1 Volts In—22.5 Volts Out
- .05 MHz to 80 MHz Broadband
- Flat 47 db Gain
- Solid State
- Low Distortion

$980

10-500 MHz TUNABLE RF POWER AMPLIFIER

Tunable in six bandswitched ranges from 10 to 500 MHz, the RF-815 provides up to 8 watts of RF power into a 50 ohm load. With about 40 db of gain, the 3 db RF bandwidth is 1.0 MHz at the low end of the frequency range, increasing to 5 MHz wide at 500 MHz. Accurate output metering and overload protection is provided.

Applications include amplification of signal generator outputs up to 20 volts, selective amplification of RF signals as provided by a receiver preselector, exciter driver stage for transmitters, RFI testing, attenuator measurements, harmonic amplification, and many others. All solid state except for the one tube output stage. Simple mechanical design provides for easy maintenance. Light weight of 25 pounds makes the unit portable for bench use. Optional rack mounting uses 5¼" rack height.

$1150

MODEL RF-815

- Up to 8 Watts into 50 Ohms
- > 35 DB Gain
- Bandwith 1-5 MHz
- Low Distortion
- Small and Lightweight

OTHER EQUIPMENT

Other models available include amplifiers, both wideband and tunable, low level to 100 watts, audio to 500 MHz; frequency synthesizers, signal generators, and programmable signal sources to 500 MHz. Modifications to your specifications can be furnished. Contact our local sales representative or the factory. Our other divisions are leaders in commercial and military two-way radio equipment. For information about our Single Sideband, VHF-FM, Marine, Mobile, or Military lines, contact the factory.

For complete information contact Sales Manager, Electronic Instrumentation Operation.

$375.00

WR-514A TV Sweep Chanalyst

- Fundamental sweep output on all VHF TV channels; sweep width adjustable to 12 MHz
- Video and IF sweep output; sweep width adjustable to 20 MHz
- 7 crystal-controlled IF markers
- Solid-state marker-adder provides distortion-free sweep/marker displays

$128.00

WV-510A Master VoltOhmyst

- All solid-state, battery/AC operated
- 7 overlapping ranges for AC, resistance, and DC current; 8 ranges for DC voltage
- 21-megohm resistance on all DC ranges
- ± 3% accuracy of full-scale reading for all voltage and current functions

$30.00

Kit $22.00

WG-412A RC Circuit Box

- Resistor values from 15 ohms to 10 megohms
- Capacitor values from 100 pF to .22 μF
- Test leads with alligator clips

$256.50

WR-99A Crystal-Calibrated Marker Generator

- Tunable output from 19 MHz to 260 MHz
- For aligning and trouble-shooting TV and FM receivers
- Built-in crystal calibrator

$63.00

WV-77E VoltOhmyst

- Measures dc and ac rms voltage up to 1500 volts, ac p-p voltage of complex waveforms to 4200 volts, and resistance from 0.2 ohms to 1000 megohms
- 11 megohm imput resistance

$88.00

WV-500B Transistorized Voltohmyst

- All solid-state, battery operated and portable
- Eliminates warm-up time and zero-shift
- Measures AC/DC voltage and resistance

$66.75

WT-501A In-Circuit/Out-of-Circuit Transistor Tester

- Battery operated and portable
- Tests both low and high power transistors
- Collector current adjustable from 20μA to 1 A

$42.00

WP-26A

$28.50

WP-25A

TV Isotap Isolation and Autotransformer

- Checks high-low-medium line-voltage operation
- WP-25A...275VA; WP-26A...400VA
- Minimizes shock hazards... prevents damage to test equipment

$87.00

$48.00

WP-700A & WP-702A (dual unit) Power Supplies

- 0 to 20 volts at 200 MA
- Negative feedback regulator circuit
- All silicon transistors and diodes

LABORATORIES

$58.50

$58.50

WP-703A & WP-704A Power Supplies

- 0 to 20 volts at 500 MA for WP-703A; 0 to 40 volts at 250 MA for WP-704A
- Negative feedback regulator circuit
- All silicon transistors and diodes
- Electronic short-circuit protection

$55.50

WV-38A Volt-Ohm-Milliammeter

- Measures ohms, DC volts, AC volts, direct current, audio signals in db units
- Precision ±1% resistors insure high accuracy
- Meter movement protected against burn-out

$180.00

WO-33A Super Portable Oscilloscope

- Flat response to 5.5 Mc
- Frequency compensated 3-to-1 vertical attenuators
- Automatic switching from wide-band to narrow-band on range switch

$95.00

WA-504A Transistorized Sine/Square Wave Audio Signal Generator

- Frequency range — 20 Hz to 200,000 Hz
- Stable signal — amplitude variation only ±1.5 db
- Distortion only 0.25% from 30 Hz to 15 kHz

RCA Test Equipment and Accessories Catalog 1Q1218B

Available from your local RCA Test Equipment Distributor

$72.00

WR-50B RF Signal Generator

- Frequency range — 85 kHz to 40 MHz (6 overlapping ranges)
- Internal 400 Hz audio oscillator
- Sweep output at 455 kHz
- Includes crystal oscillator for use with external crystals

$98.50

WA-44C Sine/Square Wave Audio Signal Generator

- Wide frequency range — 20 Hz to 200,000 Hz
- Distortion only 0.25% from 30 Hz to 15 kHz
- Stable signal — amplitude variation only ± 1.5 db

$90.00

WV-76A High Sensitivity AC VTVM

- Measures 0.0002 volt to 100 volts (9 overlapping AC volt ranges)
- Measures −40 to +40 db levels on separate decibel scale
- Probe permits measurements to 500 volts or +56 db

$298.50

WO-505A 5″ Solid-State Oscilloscope

- Flat-face 5″ CRT with illuminated graph screen
- DC vertical amplifier; DC/AC input
- High sensitivity (.05 V range)
- Useable response to 8 MHz
- Regulated power supply for maximum stability

THERMOMETER SYSTEM

MODEL 1062/1063

FEATURES

- Range: —75 to +140°C or —100 to +280°F
- Designed for direct digital readouts
- Sensitivity of 10mv/degree
- Probe linearity of .1%
- 100 millivolt strip-chart recorder signal
- Military grade components for maximum probe reliability

STEM 1062/1063 consists of a Model 1062 power supply and signal conditioning unit together with one Model 1063 temperature sensing probe. This system is de-ned to be used with digital voltmeters to measure temperatures between —75 and +140 °C. The readings are presented directly in engineering units without resort tables or linearizing functions. Provision is made for the simultaneous recording of the probe output on a strip chart recorder. Provision is also made for substitut- an analog readout device for a digital voltmeter readout.

DEL 1062 POWER & SIGNAL CONDITIONING UNIT is made up of a regulated power supply and a signal conditioner section. The power supply is a highly regulated nperature stable source of +15 VDC which can supply up to 50 Model 1063 probes. The input is 24 to 30 volts rms 50 to 400 Hz.

e signal conditioner is made up of output and biasing circuits required by a single Model 1063 probe. These circuits are shown in the schematic diagram and are sily duplicated if more than one probe is to be operated from the power section. Model 1062 is also available as a plug in card.

DEL 1063 TEMPERATURE SENSOR is an ultralinear current generator (.1%) which supplies an output current proportional to temperature as is shown in the graph. e basic sensitivity is 5 microamperes per degree Celsius so that signals of 10 millivolts per degree Celsius or 10mv/°F are obtained with the recommended output cuit component values. Applications of this probe in digital and analog thermometers are shown in the schematic diagram.

MODEL 1070/1071

FEATURES

- Range: —75 to +600°C or —100 to +800°F
- Designed for direct digital readout
- Sensitivity of 10 mv/degree
- Linearity of .1%
- 100 millivolt strip-chart recorder signal
- High temperature platinum probe for maximum reliability
- Dynamic linearization of the probe signal

STEM 1070/1071 consists of a model 1070 power supply and signal conditioning unit together with one of the Model 1071 platinum temperature sensing probes. s system is designed to be used with digital voltmeters to measure temperatures between —75 and +600°C or —100 and +800°F. Dynamic linearization of the be signal provides readings directly in engineering units without resort to tables. Provision is made for the simultaneous recording of the measured temperature a strip-chart recorder. Model 1070 is also available as a plug-in card.

DEL 1070 POWER AND SIGNAL CONDITIONING UNIT is made up of a regulated power supply and a signal conditioning section. The power supply is a highly regu-ed temperature stable source of +15 vdc. The input is 24 to 30 volts rms 50 to 400 Hz.

e signal conditioner is made up of a Model 1077 Amplifier with the necessary output and biasing circuits. The input signal to pins A, B and C of the amplifier is from 100 ohm platinum element using the three-wire lead resistance canceling connection. A second 100 ohm platinum element connected to pins D and E provides the namic linearizing signal. The amplifier output voltage at pin 9 is proportional to probe temperature and is shown in the above graph. Units with a 0 to 5 volt signal and sensitivities of up to 50 mv/°C are also available.

DEL 1071 TEMPERATURE SENSOR is a general purpose dual platinum unit consisting of two separate 100 ohm windings packaged in a stainless steel housing. e sensor length has to be chosen so that the maximum temperature of the lead end of the probe is not exceeded (i.e. 250°C). Available lengths range from the 4 ches shown to 18 inches in ½ inch increments.

ASK FOR FREE CATALOG covering the above systems and our line of precision temperature transducers having output signals of 0 to +5 vdc and sensitivities of up to 200 mv/°F. Catalog describes transducer models designed for measuring temperatures of surfaces, gases and liquids which have been developed for industrial, aerospace, oceanographic and laboratory applications.

AC/DC Voltage, Current and Power Standards

Model 829G
Digital Standard

Model 1000

Model 829G	Measure & Deliver
Full-scale ranges	AC/DC Volts 0.1V—1000V AC/DC Current 100μA—10A Ohms 0.1-10 meg.
Accuracies of reading	±0.05% DC ±0.08% AC ±0.06% Ohms
AC Frequencies	50, 60 400, 1000 Hz
Price	$3,100.

Model 1000 Potentiometer with accuracy of ±3 ppm to 2.3 V. Plant or field use. Self calibration and easy to read digital presentation.
Price: **$2100.**

Magnet Chargers and Treaters

Model 2470-350
Variable output voltage with energies up to 440 watt-seconds for saturating up to 4 lbs. of Alnico V using wire-wound fixture. Bench or rack mounting available. Accessory Booster available for doubling output. **$1,145.**

Model 990
Magnetreater®
Completely solid state demagnetizer for stabilization of permanent magnets. Power continuously variable from less than 1VA to in excess of 80,000VA. Resolution, 0.1%. Can be programmed for automatic or semi-automatic operation.
$ 750.

Model 1500
Produces 225 watt-seconds for large Alnico meter magnets plus cobalt platinum and barium ferrite materials. Wire-wound fixtures plug into front panel through safety interlocks. **$1,290.**

Model 942
Saturate Alnico magnets to 34 lbs. and high coercive force barium ferrite compounds of any shape or number of poles. Outputs to 3,600 watt-seconds. Safety interlocked.
$2,140. to $2,740.

Model 3260
First all solid state impulse charger variable output to 54 watt-seconds. Capable of magnetizing a wide range of materials and configurations. **$775.**

Model 107A
Saturates most medium size and instrument magnets, including core types, using variety of fixtures. Two output ranges: Maximum 18 watt-seconds. Booster unit also available.
$ 750.

Crystal Impedance Meters

Model	Frequency Range	Impedance Range	Price
459A	800KHz-15 MHz	0-9,900 ohms	$1175.
531	10-140 MHz	10-150 ohms	890.
541C	2.5-1100 kHz	200 ohms-0.5 megohms	1175.
1207	75-200 MHz	10-125 ohms	1350.

Reference standards for measuring resonance and anti-resonance of quartz crystals in determination of capacitance, inductance and performance index. Meet U.S. MIL-C-3098E/Amd. 1 and U.K. Defense DEF-5271 A.

Gaussmeters

Model 3265

Model 505, a low cost unit ranging from gauss to 50 kilogauss in 7 full-scale rang Measures permanent magnet, DC and fields to 20 kHz. Built in probe calibration a zero center mode for determining polari Accuracy: ±3% Price: **$210.00**

Model 750, a wide range device for flux d sity measurements from .02 gauss to kilogauss in 24 full-scale ranges. Measur permanent magnetic fields, DC and AC fr 20 Hz to 400 Hz. Easy to read 7" meter. Li or battery operation for field use. Accura ±1%① Price: **$ 720.00**

Model 3265, three-in-one gaussmeter capa of measuring absolute flux densities fr .02 gauss to 50 kilogauss (DC and AC to 4 Hz). In the expanded scale mode, measu ment to a resolution of 1 ppm and a differe tial mode for simultaneous measurement two separate fields or field gradients. Ac racy: ±1%① Price: **$ 1050.00**
①Plus accuracy of reference.
Gaussmeters are solid state, Hall effect struments that yield laboratory accura traceable to NBS.

Probes — Are InAs elements for temperatu stability. Choice of flat, axial or tangential various sizes to fit most gaps. Flat rang from .006" thick x .135" wide x .625" lo **$95.00 to $470.00**

Reference Magnets — Traceable to NBS w 50 gauss to 20K gauss fields and gaps fr .040" to .343" are standards for probe calib tion. **$45.00 to $500.00.** AC reference magn (1000 gauss peak-to-peak) also available **$105.00**

Magnetometer

Model 101

Solid state low level magnetic flux densi measurements from 1 gamma to 100,0 gamma (1 oersted). Temperature compe sation is provided to enable virtual drift-fr operation.
Price: **$630.** — Standard Probe: **$11**

Automagnetic® Systems

A combination RFL standard m netizing, measuri and demagnetizi equipment perm interconnection semi-automatic completely automa systems, design for individual quirements. Proce ing includes TV BAR and C shap magnets, DC mete Torque motors, celerometers a other designs e bodying perman magnets.

SCR's replace bulkier auto-transformers and saturable core reactors with a resultant line of light, compact and reliable controllers.

COMPONENTS DIVISION

tom Service/Engineering Consultation

RFL Components Division offers a custom service with ally unlimited coil winding capabilities. High quality are wound to meet special design requirements or to plete any inductive circuit application.

e goal of our Components Division is to provide a per- lized service with quick delivery and competitive prices. engineers are always available for consultation either at or your plant to help with any individual problem relating il design and manufacture.

Applications

In addition to the wide range of coil combinations available, a large variety of mechanical and mounting configurations may be specified. These components are adaptable to chassis or circuit board applications. They are used for filters, magnetic amplifiers, blocking oscillators and low signal, high frequency devices.

ven Reliability and Quality

has designed more than 7,000 different coil combinations late in support of our long established product line. Mean- e-between-failure figures and field experience in industry, tary and aerospace over the years have attested to the ability and built-in quality of every RFL manufactured ponent.

ll inductors are precision wound under strict quality trol supervision using the finest materials available. cal sizes range from under ¼" to over 2" outside diameter. uctances range from 0.06mH to 10.4H over wide frequency ges.

SEP/CONWAY PRECISION INSTRUMENTS

SERIES 36000 MULTI-RANGE LAB METERS

Designed for general production, lab and bench testing use. 5000 Ohms per volt sensitivity. Accuracy 2% FSD. Electronic protection against overloads of up to 100,000% (1000 times). Double spring-loaded sapphire jewel pivots. Mirror scales. Knife-edge pointers. Rugged five-way binding posts. Arc length 2¾". Size 6" x 3⅝" x 2⅛".

MODEL — PRICE	RANGES
36007 DC Voltmeter $37.50	0-1/2.5/5/10/25/50/100/250/500/1000 V DC

36010 Ohmmeter $39.50	0-5/25 Ohms

MODEL 30061 VOLT-OHM-MILLIAMMETER

FEATURES

- **50,000 Ohms Per Volt Sensitivity.**
- **Electronic Movement Protection Against Overloads Of Up To 100,000%.**
- **Input Circuits Fuse Protected.**
- **2% Accuracy.**
- **AC & DC Current Ranges.**
- **Double Spring Loaded Sapphire Jewel Pivots.**
- **Polarity Reversing Switch.**
- **Mirror Scale.**
- **Knife Edge Pointer.**

SPECIFICATIONS

Sensitivity:	50,000 Ohms Per Volt DC 10,000 Ohms Per Volt AC

Size:	5 13/16" x 4⅛" x 1⅞"
Includes:	Leather Case, Tilting Handle, Leads, Batterie
Price:	$61.00

PRECISION 0.5% VOLTMETERS, AMMETERS & WATTMETERS

These 0.5% precision instruments feature double spring-loaded industrial sapphi pivots, mirror scales and knife-edge tantalum pointers. DC meters are moving co instruments with 5000 Ohms per volt sensitivity. AC meters are moving iron wi 0.5% accuracy from 15-100 Hertz. Wattmeters are electrodynamometer AC/D movements with four voltage and two current ranges each.

0.5% Voltmeters and Ammeters are $115.00. 0.5% AC/DC Wattmeters are $195.0

SEP INSTRUMENTS

310 MADISON AVENUE • NEW YORK, N.Y. 10017 • 212-867-9480

NOISE GENERATORS

Model 150 is an all solid-state noise generator of high precision suitable for the most exacting random signal work and also for general laboratory use, calibrating spectrum analyzers and probability density analyzers, etc. Both the output spectral density and the amplitude probability density are stable and controlled. The output is calibrated in terms of spectral density to ±0.3% and the output may be read with a high degree of accuracy in terms of power or voltage spectral density by simple numerical constants. The output is indicated in volts RMS and dBm in 50 ohms.

Spectral Density	5 mV/ Hz ±0.025 dB absolute calibration ±0.3%
Frequency Range	DC to 40 KHz DC constant less than 5 mV
Output Impedance	50 ohms ±0.2%
Output Level	1 volt RMS across a 50 ohm load
Attenuator	60 dB in 10 dB steps, ±0.05 dB overall
Variable Amplitude	a variable amplitude control is provided
Metering	mirror-backed taut-band movement
Conformity to Gaussian Amp Prob Density	±2% of point to 2.5 sigma +2% −30% of point to 4 sigma
Price	Model 150 —$1850.00 Model 150R—$1850.00 (rack mount)

NOISE MODULES

A wide range of encapsulated noise modules is available, with frequency ranges to 1 MHz and spectral flatness to 0.2dB. The modules are designed for PC board mounting, and their low profile (1.5 in. wide x 3.25 in. long x 0.625 in. high) permit close mounting of PC cards in card trays. These modules are ideal for OEM equipment, systems, special noise setups and experiments, etc.

Because of the wide range of characteristics available, it is impossible to give exhaustive listings. Write your requirements for a prompt quote.

MULTI-BAND GENERATORS

Model 220 is a general-purpose wide-range noise generator. Eleven noise bands are provided, with upper band edges from 2 KHz to 10 MHz. A 60 dB attenuator in convenient 10 dB steps and a variable amplitude control permit convenient, accurate output level settings. A mirror-backed taut-band movement meters the output. The meter and attenuator are scaled in volts RMS and dBm in 50 ohms. Output impedance is 50 ohms, and an output of at least one volt RMS across a 50 ohm load is available on all bands.

Frequency Ranges	Lower Band Edges, all Bands are 5 Hz Upper Band Edges are 2, 5, 20, 50, 100, 200, 500 KHz, 1, 2, 5, 10 MHz
Spectral Density	Flat ±0.3 dB, all bands
Amp Prob Density	Symmetrical Gaussian, all bands
Price	Model 220 —$980.00 Model 220R—$980.00 (rack mount)

Model 210 is identical in all respects to the Model 220, except that it has ten noise bands, the band from 5 Hz to 10 MHz being omitted.

Price	Model 210 —$935.00 Model 210R—$935.00 (rack mount)

SINGLE-BAND GENERATORS

Model 240 will provide noise signals with a symmetrical Gaussian amplitude probability density and a spectrum flat ±0.5 dB from 20 Hz to 20 MHz. An output level of 1 volt RMS across a load resistance of 50 ohms is available through an output impedance of 50 ohms. A variable level control and 60 dB attenuator in 10 dB steps permit precise, repeatable level settings, and the output is metered by a taut-band mirror-backed meter scaled in volts RMS and dBm.

Output Spectrum	20 Hz to 20 MHz ±0.5 dB
Output Level	1 volt RMS across a 50 ohm load
Case	6¼H x 11W x 10D
Price	$680.00

Model 250 will provide noise signals with a symmetrical Gaussian amplitude probability density and a spectrum flat ±0.5 dB from 10 KHz to 12.5 MHz. An output level of −30 dBm across a load resistance of 75 ohms is available through an output impedance of 75 ohms. A variable level control and 60 dB attenuator in 10 dB steps permit precise, repeatable level settings, and the output is metered by a taut-band meter.

Output Spectrum	10 KHz to 20 MHz ±0.5 dB
Output Level	−30 dBm/ KHz
Case	6¼H x 11W x 10D
Price	$680.00

Simpson®

INSTRUMENTS THAT STAY ACCURATE

PANEL INSTRUMENTS

OVER 1500 STOCK RANGES, SIZES, AND TYPES

■ NEW! CENTURY SERIES

A MODERN BLEND OF PHENOLIC AND GLASS

Simpson's new panel instrument design concept. Rugged glass and phenolic construction **plus** a modern clean-cut design. Directly replaces older panel instrument designs. A complete line to meet all electrical needs — AC and DC Ammeters, Wattmeters and Elapsed Time Meters. Available in four sizes: 1½", 2½", 3½" and 4½". Features Simpson's self-shielding movements with spring-loaded pivot and jewel or shock-proof Taut Band suspensions. Available from stock in a wide selection of ranges. Write for bulletin 3000A or see listings in RADIO-ELECTRONIC MASTER.

■ WIDE-VUE

Simpson's most popular panel instrument designs. Clear acrylic viewing areas will not yellow or develop hairline cracks. Available from stock in 1½", 2½", 3½", 4½" and 8" sizes and the widest selection of ranges. Behind panel bezel mount also available for 3½" and 4½" sizes.

■ DESIGNER SERIES

3½" and 4½" sizes, made for today's compact equipment designs — without sacrificing readability. 4½" model uses less than 3" of panel height, yet has a clear, readable scale over 3½" long. Clean, crisp glass windows.

■ BOLD-VUE

Now you can have Simpson quality in this bold looking 3-hole mount design. Large numerals and wide tapered pointer make reading easy. Simpson movements are built for stay-accurate dependability. Bold-Vue is available in 2½" and 3½" sizes.

■ EDGEWISE

1½" and 2½" sizes. Stackable design permits extremely compact panel displays. Optimum scale display, extending nearly the full height and width, allows the use of large, easy-to-read numerals. Core magnet movements are self-shielding.

CALL SIMPSON FOR ALL YOUR PANEL INSTRUMENT NEEDS . . .

- **Elapsed Time**
- **Radio Frequency**
- **Pyrometers**
- **Behind Panel Mounts**
- **Decibel/VU**
- **Electro-Mechanical Counters**

Write today for bulletin 3000A.

■ DIGITAL

Adds so much to your new equipment design . . . easier readouts, better accuracy, and the most modern look. Simpson's model 2800 is a reliable instrument which features easy one-hole panel mounting. Three full-time digits plus 100% overrange. ±0.1% accuracy Write for bulletin 3000A.

■ CONTROLLERS

Maximum reliability design for control, alarm, or limit applications. Photoconductor sensing eliminates all interference with the indicating meter. High gain transistor amplifier provides accurate switching and a "dead band" of just 0.25% maximum. Rugged Seal construction withstands rigorous environmental conditions. Write today for bulletin 3000A.

TEST EQUIPMENT
ONTROLLERS • CHART RECORDERS

Simpson®
INSTRUMENTS THAT STAY ACCURATE

TEST EQUIPMENT

160 Handi-VOM

Full-size VOM features in a palm-size package! 20,000Ω/V DC, 5000Ω/V AC. Overload and shock protected Taut Band movement. Built for today's VOM needs, including solid-state circuit testing, the 160 has 0.25 VDC and DC uA ranges. $55.00.

313 Solid-State VOM

VTVM features plus VOM convenience. Battery operated, with 11 MEGΩ DC, 10 MegΩ AC input impedance. Operates for over 300 hours on easily obtained inexpensive batteries. Large 7″ scale for maximum resolution. FET input withstands high votlages. Taut Band movement only is overload protected. $125.00.

229 AC Current Leakage Tester

Designed to test 120 VAC appliances and electrical equipment in accordance with proposed U.S. Standards Committee specification C101.1. Approximates normal perception curve to within ±1.0 dB. Measures currents as low as 5 microamperes. Detects shorts and near shorts. $90.00.

2726 Frequency Counter

32 MHz counter has six full-time digits plus overrange. Measures average frequency, frequency ratios, time periods, time intervals, and totalizes. Also provides multiple measurement of period and ratio. Accuracy 0.001, $600.00. Five-digit model also available, $550.00.

2700 Digital System

Plug-in function modules for DC and AC voltage and current, plus resistance. Features four full-time digits, automatic polarity indication, and ±0.05% accuracy. Supplied complete with DC voltage range module. $615.00.

WORLD FAMOUS
260® VOMs

Now has Simpson's new Taut Band movement. Self-shielding and shockproof for outstanding accuracy and repeatability. Varistor protects the movement from even 200,000% overloads. A replaceable 1-ampere fuse guards the input circuits, 260-5, $65.00.

The 260® family includes VOMs with special features, such as push-button overload protection, mirror scales, and increased accuracy. Write today for bulletin 3000A or see listings in RADIO-ELECTRONIC MASTER.

CHART RECORDERS

Model 2750 panel mounts in just 3¾″ x 3¾″ of panel space. Records for over a month — unattended. Model 604 has 22 ranges, switch selectable, for low power-range. Simpson also has fast response potentiometric and XY recorders. Write for complete information, or call your local Simpson representative.

■ TEMPERATURE CONTROLLERS

Simpson can meet your control needs with "off the shelf" delivery of stock ranges — or experienced sales engineers can custom design controllers for your application. Simpson model 5632 RO-7 is 3¾″ square and extends behind the panel only 2¾″. Controller supplied wtih cold-end compensation, thermocouple break protection and proportioning. Price $90.00. Write for complete information, or call your local Simpson representative.

Broadband
True RMS Voltmeter

Model 3600
Digital Voltmeter

If you are making Broadband AC Voltage Measurements to 10 MHz you must be using a Ballantine . . . There are the famous Models 323 and 303, Broadband "True Rms" and Average Responding Units respectively.

New Model 3600 0.01% Accuracy DC Digital Voltmeter can be combined with Model 3571 AC Converter Module to form the most comprehensive voltage measuring system available . . . 10 MHz Frequency Coverage ■ Four digit Nixie Readout ■ Measurements from 10 mV to 300 VAC full scale . . . and there are BCD outputs for computer interfacing and programmability of all controls.

Find out why the Ballantine is a respected leader in the field of Voltage Standards and Calibrators . . . See the new 421B Voltage Calibrator in action.

Singer/Alfred Electronics

Model 8000/7051
Sweep Network
Analyzer System

Model 6151
Solid State
Sweep Oscillator

Sweepers are the by-line of Alfred Electronics. A full range of units from 10 MHz to 40 GHz . . . Purchase oscillator plug-ins to cover your frequency of interest now . . . expand your coverage at any time in the future.

Alfred Sweep Network Analyzer Systems are the economical way of combining all the functions of an SWR meter, slotted line, power meter, ratiometer, lin log converter, precision attenuator and oscilloscope into one convenient package. All measurements are made with computer accuracy over a 60 dB dynamic range with either direct dB or dBm readout.

Also remember Alfred's complete line of Microwave Amplifiers ■ Variable Attenuators ■ Sampler-Attenuators ■ PIN Modulators ■ Sawtooth Generators ■ Crystal Detectors

STICHT INSTRUMENTS

TACHOMETERS

FOR EVERY NEED . . . EVERY SPEED

ELECTRICAL TACHOMETERS

OR PERMANENT MOUNTING

Furnished complete with Generator, Indicator and all necessary Drive Equipment such as gears, couplings, etc.

Indicator sizes from 3" to 18" (extra large sizes)

- Heavy duty design.
- Smooth, instant response to changes of speed.
- No Pointer Fluctuation.

RPM FPM YPM ETC.

Bulletins 720, 723

CENTRIFUGAL STATIONARY TACHOMETERS

For permanent mounting on machines and engines. Model "J", with 3", 4", 5½", 8" or 10" dial diameter. Flexible cable driven. Many standard ranges reading RPM, FPM, YPM, and other operations.

Bulletins 793, 794, 795, 796, 798

PORTABLE TACHOMETERS

CENTRIFUGAL HAND TACHOMETERS

With one, two, three, five or six ranges in one tachometer. All speeds up to 100,000 RPM with overspeed protection.

Type "UO"	Cat. No. 303	30-12,000 RPM	5 ranges
Type "UO"	Cat. No. 322	60-24,000 RPM	5 ranges
Type "UY"	Cat. No. 630	25-30,000 RPM	3 ranges
Type "UY"	Cat. No. 640	30-40,000 RPM	3 ranges
Type "UH"	Cat. No. 666	30-100,000 RPM	6 ranges

Bulletins 750, 751, 756, 765, 790

CHRONOMETRIC HAND TACHOMETERS

With built-in chronometric movement, timing period 3 or 6 seconds.

JAQUET

Guaranteed accuracy ½%.
Cat. 2302 0-2000 RPM
Cat. 2301 0-20,000 RPM
Cat. 2304 0-200 RPM

DATAPULSE Waveform Function Generators

Datapulse 401 Function Generator.

The Model 401 provides small size, wide frequency range and clean waveforms at a low price. The 1% of setting dial and .25% total harmonic sine distortion make it the best buy in general purpose oscillators, or waveform sources.

Datapulse 410 Sweep/Function Generator.

Dual 40 volt output amplifiers and a multiplicity of operating modes make the Model 410 Sweep/Function Generator the most versatile waveform source available. The built in sweep generator and four quadrant multiplier (for amplitude modulation and programming) further expand the Model 410's capability.

SPECIFICATIONS	401	410
WAVEFORMS:	Sine, Squarewave and Triangle	Sine, Squarewave, Triangle, Pulse, Sine Squared and Sawtooth

ATAPULSE Waveform Function Generators

Datapulse Function Generators are general purpose aveform sources which provide basic sine, square and riangle waves for use in every application where fre-uency coherence and waveform clarity are of utmost nportance. They find wide acceptance as signal sources or the design and testing of logic modules and counters, perational and audio amplifiers, filters, spectrum analyz-rs, digital voltmeters, comparators, A/D converters, chart ecorders and a wide range of similar devices. They also rove to be invaluable for frequency response measure-ents, oscilloscope calibration, music and voice simula-on, computer and computer peripheral design and many ther related applications. Precise calibration and stability f operation combined with high quality construction make atapulse function generators the ultimate instrument for e design and testing of nearly every type of electronic ircuit.

ine, Square and Triangle Waveforms.

The Datapulse Model 401 Function Generator is an conomical source of sine, square and triangle waveforms n the frequency range of 0.02 Hz to 2 MHz. Further, it as DC coupled, broadband frequency modulation capa-ilities. A five volt ramp applied to the FM input pro-uces a frequency sweep ratio of 1000:1, i.e. 20 Hz to 0 KHz, etc.

10 kHz Sinewave, Frequency Modulated by a 1 kHz Sinewave.

Output amplitude of the Model 401 is 20 volts, peak-to-peak, with a full 80 db range of amplitude variation. The outputs are available from a selectable source impedance of either 50 or 600 ohms. Rise time of the squarewave output is less than 40 nanoseconds. Also available, for reference purposes, is a calibrated 1 volt, peak-to-peak squarewave.

The Datapulse Model 410 Sweep/Function Generator represents the epitome of waveform generation versatility. Incorporating advanced solid state, integrated circuit technology, the Model 410 offers capabilities previously unavailable in any waveform generating instrument. The waveform photograph below illustrates the swept sine wave capability of the Model 410.

Swept Sinewave.

The Model 410 features all of the salient characteristics of the Model 401 with an extended frequency range of from 0.0002 Hz to 2 MHz. Additionally it features wide sweep range, externally triggered operation of both main generator and sweep, a fully integrated internal sweep ratio of 1000:1, amplitude modulation with true four quadrant multiplication, two 40 volt, peak-to-peak, output amplifiers with independent waveform selection, DC offset adjustment and wide range amplitude control allowing a balanced output of 80 volts, peak-to-peak.

Supressed Carrier Amplitude Modulation.

Datapulse Function Generators produce extremely accurate, clean waveforms at exceptionally economical prices. Further, they feature the use of highest quality electrical and mechanical components throughout. Their mechanical design offers wide open, easy to service construction. The circuit boards are of the highest quality with all plated through holes for through board connections. All of these features, plus a design which requires a minimum number of field settable calibration adjustments, make Datapulse Function Generators the best waveform source value on the market today.

CALIBRATED SPECTRUM ANALYZERS

SYSTRON-DONNER SPECTRUM ANALYZERS

The Systron-Donner Spectrum Analyzer line consists of a series of instruments offering calibrated spectrum analysis over a frequency range from 10 Hz to 40 GHz. These instruments are especially designed to cover applications in the fields of audio, vibration, intermediate and high frequencies, RFI/EMI, broadcast and single-sideband, and through the microwave region.

One of the important features of these instruments is the portable nature of their design which permits them to be internally battery operated for extended periods of time (>8 hrs.). Instruments of this type generally find extensive use in the field, for RFI, ECM, antenna pattern measurements and similar applications; battery operation and light weight of the Systron-Donner instruments make them ideal for such on-site system testing.

All units in the line offer reliable solid state design, high sensitivity, wide dynamic range, and fully calibrated display.

MODEL 710/800 (10Hz–50kHz)
Lin/Log Scan & Tracking Oscillator Output

Model 710/800, 801 Plug-In Series Calibrated Spectrum Analyzers

This series presently consists of the Model 710 Display Unit, designed to accept Systron-Donner Plug-in Spectrum Analyzer modules, and two plug-ins (Models 800 & 801) which allow measurements in the frequency domain from 10 Hz to 50 kHz.

The 710/800, 801 Spectrum Analyzers permit absolute measurements over a 140 dB dynamic range, any 60 dB of which is presented on the built-in 7 x 10 cm high contrast CRT. Wave analysis, distortion studies, and spectral display are enhanced by a full 50 kHz scan and a narrow 10 Hz resolution. High sensitivity (calibrated to 30 nV/cm) plus selectable input impedances of 50 ohms, 600 ohms, 10k ohm and 1 megohm simplify measurements of EMI and other low level signals. Scan width is adjustable from 10 Hz/cm to 50 kHz on a linear display. X-Y outputs, pen lift, sync and sweep inputs and many other features are standard on these fully calibrated, truly portable instruments.

The Model 710/801 Spectrum Analyzer has all the features of the Model 710/800 plus logarithmic scan and a tracking oscillator output.

Model 710/800A RFI/EMI Spectrum Analyzer

The Model 710/800A utilizes the Model 710 Display Unit with Plug-in Model 800A, designed to permit calibrated RFI/EMI measurements in accordance with MIL-STD-826A. This instrument has a 20kHz bandwidth setting making it useful for audio sound level measurements and other applications.

Model 710/805 Video Spectrum Analyzer

Model 710/805 utilizes the Model 710 Display Unit with Plug-in Model 805, designed for calibrated spectrum analysis measurement from 200 Hz to 1.6 MHz. In addition to the features of the Model 710 Display Unit, this broadband instrument includes the following specifications: linear frequency sweep; selectable scanwidths to 1.6 MHz maximum; I.F. bandwidths of 100 Hz, 300 Hz, 1 kHz and 3 kHz; 30 nanovolt sensitivity.

Model 710/805 is useful for broadcast transmitter checkout, telemetry, video signal monitoring, analysis of tape and playback systems, and general broadband signal analysis in the range of 200 Hz to 1.6 MHz.

Model 720 HF/SSB Spectrum Analyzer

Model 720 is a calibrated Spectrum Analyzer system covering a frequency range of 10 Hz to 56 MHz. This instrument consists of the Model 806 Frequency Extender combined with one of the following basic instruments: 710/800; 710/801; 710/800A, or 710/805. The Model 806 Frequency Extender is a separate R.F. Converter deriving its power from the Model 710 Display Unit. Tuning is manual with the frequency read directly from a slide-rule dial and the scanwidth determined by the model of the plug-in used with the Model 710 Display Unit.

The Model 806 has an extremely stable oscillator and high sensitivity (<60 nanovolts), making this system valuable for monitoring and analysis of H.F. communication systems, especially single-sideband applications.

Model 751 Microwave Spectrum Analyzer

The Model 751 covers the frequency range of 10 MHz to 6500 MHz. This unit combines complete portability for field use with the precision measurement capabilities of larger laboratory spectrum analyzers.

Sensitivity as low as −110 dBm, 500 MHz scan width, 60 dB "on screen" dynamic range, and 1% frequency accuracy are featured. Low power dissipation (20 W) and light weight make the Model 751 ideal for field use for such applications as spectrum surveillance, antenna pattern measurement, RFI, and field strength measurements, and CATV monitoring.

MODEL 761
(10MH –40GHz)
1 kHz Resolution

Model 761 Broadband Spectrum Analyzer

Model 761 is a broadband calibrated spectrum analyzer covering a frequency range of 10 MHz to 40 GHz. This instrument uses the Model 855 Frequency Extender in combination with the Model 751 Microwave Spectrum Analyzer. Model 855 is a separate R.F. Converter deriving its power from the Model 751. Tuning is manual with frequency read directly from a slide-rule dial and the scanwidth determined by the setting of the 751 unit, to a maximum of 500 MHz.

With its wide scanwidth and broad frequency coverage coupled with the ease of operation and portability of the basic Model 751, the Model 761 combination is a very useful instrument for monitoring and analysis of HF and microwave sources in communication, radar, telemetry, and guidance applications.

Capability: 8 Different Measurements!

-TR-6515 Integrating Digital Voltmeter

-TR-6515 Integrating Digital Voltmeter has a basic measurement range from 300mV full scale in 5 ranges. It features AUTOMATIC RANGE SELECTION, a system in which the optimum range in respect to input voltage is selected automatically.
A guaranteed absolute accuracy of 0.01% of rdg. 1 digit is attained over a period of 3 months.

Plug-ins for **-TR-6515**
-TR-6018 Micro Volt DC Range Unit
-TR-6018 resolves signals as weak as 10 nanoV for five-digit display.

Range: 300 μV, 3mV, 30mV, 300mV f.s. in 4 ranges
Max. Resolution: 10nanoV on 300 μV range
Max. Sensitivity: 0.03 μV.
Accuracy: 0.02% 2 digits (300 μV range)

-TR-6061 DC Differential Unit
-TR-6061 is designed to measure deviations from preset voltage with high accuracy and high resolution.

Range: 300mV to 102V Max. Resolution: 1ppm.
Input Impedance: 100 MΩ (0 to 102V input, deviation ±3V), 10 M
Accuracy: 0.009% of rdg. (25°C ± 5°C, Humidity 70%)
Total Effective Noise Rejection: 160 dB.

-TR-6047 TRUE RMS AC Range Unit
-TR-6047 is capabile of measuring true rms AC voltage: sine, triangular, rectangular, pulse, and other sophisticated waveforms

Range: ±500mV, ±5V, ±500Vrms f.s. in 4 ranges
Max. Sensitivity: 100 μVrms (500mV range)
Input Impedance: 1MΩ less than 27 pF.
Accuracy: 0.12% of rdg. 0.04% of f.s.
(Frequency: 45Hz to 5kHz, 25°C ±5°C, Humidity 70%)
Frequency: 30Hz to 20 kHz

-TR-6026A Automatic Range Unit

Range: 30, 300Ω 3, 30, 300kΩ , 3, 30, 200MΩ (8 ranges)
Range Selection: Automatic or Manual
Measurement Method: 4 terminals.
Accuracy: 0.025% of rdg. 0.008% of f.s. (30Ω range)

AUTOMATIC CIRCUIT TEST SET

model AP-502

A FULLY AUTOMATIC PORTABLE TEST SET FOR RAPID AND ECONOMICAL CHECKOUT OF CABLES, CONNECTORS, AND HARNESSES.

SPECIFICATIONS

TEST SPEED
1200 Tests per minute

TEST CAPACITY
Continuity . . . . . 110 circuits
HiPot/Insulation Resistance . . . . . 220 points

TEST RANGES
Continuity . . . . . Resistance Limit adjustable from 1 to 99 ohms in 1 ohm steps.
Insulation Resistance . . Adjustable in steps: 1;10;20;30; 40; 50; 60; 70; 80; 90 megohms.
HiPot . . . . . Voltage adjustable from 100V to 1000V DC in steps of 100 V.

DWELL TIME
Adjustable in steps . . . . 50 ms; 100 ms; 250 ms; 500 ms; 1 sec; 2.5 sec; 5 sec; 10 sec; 30 sec; 1 min.

INPUT POWER
110 to 125V, 50–60 cps (or optional internal battery.)

BATTERY (OPTIONAL)
A rechargeable 4 ampere hour nickel cadmium battery lbs) provides sufficient capacity for 3 hours of continuc testing at 70°F.

TRANSIT CASE
The AP-502 is housed in a rugged, weather-proof, Kyc +100 carrying case with handle and removable top.

PHYSICAL DETAILS
Width . . . . 18 inches Height . . . . 9½ incl
Depth . . . . 16 inches Weight . . . . 40 pour

INPUT CONNECTORS
2 Elco 8016 series, 120 pin. (mating connectors with sol type terminals supplied)

ACCURACY
Continuity Resistance . . . . . ± 0.5 ohms or ± 1 whichever is great
Insulation Resistance . . . . . ± 1(
HiPot Voltage . . . . . – 1(

TELESCIENCES INC.

OMNITESTER™ model 1000

AN AUTOMATIC TESTER FOR PRODUCTION CHECKOUT AND MAINTENANCE OF ELECTRONIC EQUIPMENT.

STANDARD FEATURES

SELF PROGRAMMING
Automatically generates own test tape from known good sample
REJECT CRITERIA
Programmable to reject high, low, or with double limits
NBS 943 or ASCII Codes
NARRATIVE PRINTOUT
Provides English Language Printout of operator instructions for trouble shooting and repair
ERROR SEARCH
Automatically locates wiring errors
TAPE SEARCH
Provides ready access to any specific test
LONG OR SHORT PRINTOUT
At operator's option entire test including test parameters can be printed out (long) or just addresses and test results (short)
AUTOMATIC TAPE REWIND
DIAGNOSTIC TEST TAPE
Permits precise fault location in case of OmniTester failure
CALIBRATION TEST KIT
For verifying and calibrating measurement circuits
TEST SPEED
Greater than 1500 tests per minute
SMALL SIZE
Basic console 51"H x 28¾"W x 26½"D. This unit includes control and display capability for up to 100,000 access points and switching modules for 2000 points
Human engineered for simplicity of programming, operation, and maintenance

OPTIONAL FEATURES

Automatic dynamic testing by application of externally applied stimuli and verification of results
Computer Interface Capability
Four-wire Continuity Resistance Testing
Multiplex mode for simultaneous loading and testing using same test tape
Diode shunt path masking for in-circuit measurement of resistors

SPECIFICATIONS

CONTINUITY RESISTANCE TESTS
(Voltage at 5.2v and 28v)
Two-Wire Operation
Resistance Ranges:
1 ohm to 999 ohms in 1 ohm steps
10 ohms to 9.99K ohms in 10 ohm steps
100 to 99.9K ohms in 100 ohm steps
1K ohms to 999K ohms in 1K ohm steps
10K ohms to 9.99 megohms in 10K ohm steps
Accuracy: ±½ ohm or ±5%
Test Current:
Programmable through test terminals at 10ma; 20ma; 50 ma; 100ma; 500ma; 1a; 1.5a; 2a.
Four-Wire Operation
Resistance Ranges:
.010 ohm to 0.999 ohm in .001 ohm steps
.010 to 9.99 ohm in .01 ohm steps
0.1 ohms to 99.9 ohm in .01 ohm steps
Accuracy: ±3 milliohms or ±5%
Test Current:
Programmable through test terminals at 1A; 1.5A; 2A
INSULATION RESISTANCE TEST
Resistance Ranges:
10K ohm to 9.99 megohms in 10K ohm steps
100K ohm to 99.9 megohms in 100K ohm steps
1 megohm to 999 megohm steps
Accuracy: Up to 100 megohms, ± 1K ohm or ±5% above 100 megohms, ±10%
Test Voltage:
Programmable at 28v; 100v DC to 500v DC

DIODE TEST
Voltage:
1.8v DC; 5.2v DC; 14v DC; 28v DC
Short Circuit Current:
1ma; 2ma; 20ma
DIELECTRIC STRENGTH (HIPOT TESTS)
Voltage:
DC, 28v, 100 to 500v in 100v steps
AC, 100v to 500v RMS
Breakdown Current:
Test limit manually variable from 0.1ma to 2.5ma ±10%.
Protective circuit limits current after breakdown to 10ma
AUTOMATIC VOLTAGE READING (go/no go)
Range:
0.1v to 9.99v DC or AC in .01v steps
0.1v to 99.9v DC or AC in 0.1v steps
1.0v to 500v DC or AC in 1v steps
Accuracy: ± 5%
AUTOMATIC CURRENT READING (go/no go)
Range:
1 ma to 1 A
Accuracy: ± 5%
DWELL TIME
Range:
0.1 sec to 1 sec on 0.1 sec steps
1 sec to 10 sec in 1 sec steps
10 sec to 90 sec in 10 sec steps
Accuracy: ± 20 millisec or ± 10%
DOUBLE LIMIT DETECTION
Values:
± 2%; ± 5%; ± 10%; ± 20%; ± 30%
IMPEDANCE TEST
Range:
10 ohms to 9.99K ohms in 10 ohm steps
Accuracy: ± 10%
Current: Limited to 10ma
Voltage: Limited to 2v
Frequency: Choice of 160 Hz or 1600 Hz or other value may be specified. More than one frequency available as option.

Telequipment Oscilloscopes

The Telequipment line of low-cost oscilloscopes is designed and manufactured in England, sold and serviced through the Tektronix marketing organization.

These instruments meet the requirements for waveform measurements in education, service, and industry. The performance features include triggered sweep, 1-2-5 sequence step attenuators for vertical and horizontal deflection controls, calibration outputs, and 5-inch CRT's.

All Telequipment instruments are warranted against defective parts or workmanship for one year. Service and replacement parts are available through 57 Tektronix field offices.

Below are examples of the Telequipment products, which also include plug-in oscilloscopes and bandwidth to 25 MHz.

A catalog with full specifications and prices is available on request.

DUAL TRACE
TYPE D54—$550

SINGLE TRACE
TYPE S54A—$435

- 10 mV/cm DEFLECTION FACTOR and 10 MHz BANDWIDTH permit viewing of low level high frequency signals with good vertical resolution.
- FET INPUTS minimize vertical trace drift.
- TRIGGERED SWEEP, including TV field or line, so that signals remain stationary with changes in sweep speed.
- 22 CALIBRATED SWEEP SPEEDS from 0.2 μs/cm to 2 s/cm permit analysis of a wide range of frequencies.
- 4-kV CRT HIGH VOLTAGE which means that the trace is bright.
- VOLTAGE CALIBRATOR for verification of the vertical gain.
- SOLID STATE DESIGN for reliability.

For information, contact your Tektronix field office or write: Tektronix, Inc., P.O. Box 500, Beaverton, Oregon 97005.

Test digital IC's

In Circuit

estex 410 IC Analyzer is the in-circuit analyzer. Without moving the high impedance probe, the 0 isolates and identifies the problem to a specific pin. It detects **level errors, logic errors, low Vcc level** and displays **signal presence** at each pin. Relatively unskilled personnel can use Testex 410 with effectiveness.

Testex 410 IC Analyzer

Device Test Capability

The 410 tests RTL, DTL and/or TTL digital tegrated circuits of the dual-in-line or flat-pack type. Each device is tested against a plug-in program board. No other operator decisions are required. The entire test procedure is quick, mple and easily taught to non-technical personnel. Boards for commonly used devices are available, and a universal blank is supplied which can be programmed for all analyzer functions.

& Out of Circuit

Testex 420 Circuit Board Exerciser enables the Testex 410 to analyze devices on circuit boards that are not 'in-circuit'. It generates a grey code square wave to exercise the board. It is available in a minimum of 12 stages (outputs) and can be supplied in 16, 20 or 24 stages.

Texscan SWEEP SIGNAL GENERATORS

VS SERIES

RS SERIES

HS SERIES

LS SERIES

DU SERIES

Texscan manufactures solid state sweep/signal generators which cover the frequency rang of 500 Hz to 2300 MHz. Texscan's product line consists of five different types c instruments, each type being a complete line of instruments. Depending on the customer application, he may require all the versatility that the RS series provides or he may b able to perform the required test with the lower VS series generator.

The VS instruments are designed so that warm up drift is negligible and componer life is almost unlimited. Each unit has extended sweep rate capability including lin variable, manual and external.

The HS series are high power, wide tuning range units which provide more than 4 watts c leveled output over the frequency range of 20 MHz to 1000 MHz and offer a choice c four modes of operation: swept RF, modulated swept RF, CW and modulated CW

MODEL NO.	FREQUENCY RANGE	SWEEP WIDTH	SWEEP RATE RANGE	LINEARTY	RF OUTPUT	PRICE
VS-20	500 Hz to 25 MHz	500 Hz-25 MHz	.1 Hz to 60 Hz	1%	1v	$1095
VS-30	100 KHz to 100 MHz	100 KHz-100 MHz	5 Hz to 60 Hz	1%	1v	$ 895
VS-40	1 MHz to 300 MHz	200 KHz-300 MHz	5 Hz to 60 Hz	1%	.5v	$ 925
VS-50	2 MHz to 500 MHz	500 KHz-500 MHz	5 Hz to 60 Hz	1%	1v	$1250
VS-70	290 MHz to 1200 MHz	to 40%	5 Hz to 60 Hz	5%	.5v	$1095

Texscan RF TEST EQUIPMENT

Texscan Corporation Component Division manufactures a broad line of coaxial components. These components include devices for both O.E.M. and laboratory use. index below contains Texscan's standard components and will be useful for mining availability of a particular component.

modifications of Texscan's standard products have been produced for special cations and inquiries for specials are cordially invited.

AUTOMATIC COMPUTING COUNTERS

A computing counter permits accurate measurement of low frequencies. The counter makes a period measurement, then using a proprietary computer circuit takes the reciprocal and displays the answer — (frequency).

Model	Description	Price
270	1.0 Hz to 1.0 MHz, 100 MV SENSITIVITY, 5 DIGIT	$ 750
272	1.0 Mz to 10 MHz, 100 MV SENSITIVITY, 5 DIGIT	1500
273	0.1 Hz to 20 MHz, 100 MV SENSITIVITY, RPM MEASUREMENT, 5 DIGIT	1800
210	0.1 Hz to 20 MHz, 10 MV SENSITIVITY, 7 DIGIT, AUTO FILTERING	1995
211	0.1 Hz to 20 MHz, 10 MV SENSITIVITY, 8 DIGIT, AUTO FILTERING	2100

UNIVERSAL COUNTER-TIMERS

The Universal Counter-Timer is a versatile instrument with capabilities to measure frequency, time interval, period, multiple period average, ratio, multiple ratio average, total count and also provide scaled outputs.

Model	Description	Price
400-1	0-2 MHz, 100 MV SENSITIVITY, 6 DIGIT RUGGED CONSTRUCTION TO MEET NAVY BUORD 1803308F	$ 850
300	0-20 MHz, 10 MV SENSITIVITY, WITH BCD & REMOTE PROGRAMING OPTIONS, 7 DIGIT	1100

LOW COST COUNTERS

The term low cost applies to any counter that is less than $200 per digit.

Model	Description	Price
410-1	2 Hz to 200 KHz, 4 DIGIT, 60 HZ POWER LINE TIME BASE	$335
410-2	2 Hz to 2 MHz, 5 DIGITS, 60 Hz POWER LINE TIME BASE	360
410-3	2 Hz to 200 KHz, 4 DIGIT, CRYSTAL OSCILLATOR	370
410-4	2 Hz to 2 MHz, 5 DIGIT, CRYSTAL OSCILLATOR	395

DIGITAL PANEL METERS

This line of digital panel meters come with the TSC exclusive **LITE NEEDLE** that provides the quick look capability of a deflection type meter as well as digital readout and complete isolation of analog circuits from the digital output (up to 500 volts isolation on all terminals).

Model	Description	Price
700	3½ DIGIT, 100 μV RESOLUTION, **LITE NEEDLE**	$245
701	3½ DIGIT, 100 μV RESOLUTION	225
710	3½ DIGIT, 100 μV RESOLUTION, **LITE NEEDLE** BCD OUTPUT	295
711	3½ DIGIT, 100 μV RESOLUTION, BCD OUTPUT	279
703	3½ DIGIT, MULTIRANGE, DC VOLTAGE	279
704	3½ DIGIT, MULTIRANGE, DC CURRENT	295

DIGITAL SYSTEMS

Series 4000: the series 4000 digital systems are custom systems designed from standard TSC building blocks for a specific customer application. The system shown here is an on line speed monitoring system that monitors velocity (up to 2000 meters/min.) and RPM (to 200 RPM). This particular system consists of a **Master Counter Control** that provides gate and test signals to a number of **Slave Preset Counters.** When either a high or low count is recorded, a master alarm is sounded. Other systems are designed for a variety of applications in process and digital control.

These are specialized TRACOR instruments designed for your specific needs.

FREQUENCY STANDARDS

RUBIDIUM FREQUENCY STANDARD
Long Term Stability 5×10^{-11} (Std. Dev./Yr.)
Drift Rate 2×10^{-11}/month

CRYSTAL STANDARDS

Long Term Stability $< 5 \times 10^{-10}$/24 hours
5, 1, 0.1 MHz

Long Term Stability $< 5 \times 10^{-11}$/24 hours

Let Triplett Quality Standards be your guide...

Pioneers in the most advanced lines of Panel Instruments, Portable Instruments and Test Equipment (Electronic and Electrical) since 1904. Triplett's famous Bar-Ring movements set the standard of quality for the industry. This special rugged construction provides Self-Shielding, More Torque, Lower Terminal Resistance, Faster Response, and Greater Accuracy.

Triplett leadership in test equipment is marked by the world's most complete line of Volt-Ohm-Milliammeters.

All standard Triplett products are available nationally through authorized distributors.

See the entire line of Standard TRIPLETT products in RADIO-ELECTRONIC MASTER

PRECISION PHASE METERS

Direct Reading In Degrees 1 CPS To 500 KC

TYPE 406 SERIES

No amplitude adjustment from 0.05 to 90v, no frequency adjustment. Accuracy: ±0.25° relative, ±1° or ±2% absolute. Phase Range: 0-12°, 0-36°, 0-90°, 0-180° up to 360° in 8 ranges. Input impedance: 3 megohms shunted by 20 uuf. Analog output for external recorder available.

DIGITAL PHASE METER

±0.05° Accuracy, 20 CPS to 500 Kc.

TYPE 524A4

Phase angle in degrees directly represented in 4 or 5 digits. No amplitude adjustment from 0.3v to 70v. No frequency adjustment up to 500 kc. Accuracy: ±0.05° relative, ±1° absolute. Analog Output: zero for 0°, increases to +3.6v for 360°, 1 mv change for every 0.1°.

WIDEBAND PHASE VECTOR VOLTMETER

40 CPS To 20 KC Continuous Coverage.

TYPE 248A

Direct reading of total, fundamental, in-phase, quadrature components and phase angle in degrees on panel meter. Accuracy: ±0.25° or ±1% for phase, ±2% for vector voltage. Nulling Sensitivity: Less than 2 microvolts. Quadrature Rejection: over 60 db below 5 kc, 40 db up to 20 kc. Input Impedance: 1 megohm shunted with 20 uuf.

VECTORLYZERS

±0.02° or ±2% Accuracy, 0.005° Readability.

TYPE 202-202A-203

Especially suitable for measuring small phase angle near 0°, 180°, 90° and 270°. Continuously variable filter for isolation of harmonics and noise. Full Scale Sensitivity: 1°, 2°, 4°, 10° up to 360°. Freq. Range: 25 cps to 100 kc for Type 202 and 202A, 50 cps to 20 kc for Type 203.

H-F PHASE PICOSECOND DETECTOR

15 MC to 1700 MC

Accuracy: ±0.05° or ±1%

TYPE 205B1-4-5

Useable for continuous sine wave, pulsed or amplitude modulated sine wave. Calibration traceable to National Bureau of Standards. Sensitivity: 50mv with panel meter, 10mv with external receiver. Input Impedance: 50 ohms nominal. Readability: 10ps per division on main scale. 1ps on vernier scale.

VIDEO AND RF PHASE METER

50 CPS To 10 MEGACYCLES

TYPE 422A

Direct reading in degrees. Accuracy: ¼° relative or 2% absolute. Analog output available for plotting phase characteristic curve. No amplitude adjustment from 0.3v to 20v, no frequency adjustment from 50 cps to 10 mc. Input Impedance: 1 megohm shunted by 30 uuf.

MICROWAVE PHASE METERS

1 GC to 8.2 GC ±0.1° Accuracy.

TYPE 206A

Suitable for continuous sine wave or pulsed signal. Infinite resolution. Plot phase response curve on recorder, no adjustment required for variation of signal amplitude up to ten times. Frequency Range: 1 to 8.2 gc. Accuracy: ±0.1° or ±1%. Input Voltage: 50 mv minimum. Readability better than 0.05 pico-second.

VIDEO PHASE DETECTORS

100 KC To 15 MC

TYPE 205A3-4

Especially suitable for measuring small phase angle. Excellent for phase and delay measurement of filters, amplifiers, etc. at video frequency. Accuracy: ±0.05°. Readability: ¼ ns distortion. Minimum Input Signal: 10 mv rms. Input Impedance: 1 megohm shunted with 12 uuf.

TRANSFER FUNCTION ANALYZER

TYPE 308

Reads In-Phase And Quadrature Components Simultaneously.

Input Impedance: 1 megohm shunted with 20 uuf. Accuracy: ±2% of full scale. Frequency Range: 0.1 cps to 10 kc. Voltage Range: 0.03v to 100v in six ranges. Center zero gives direct identification of lead or lag. Analog output available for plotting Nyquist diagram.

WIDE-BAND PHASE STANDARD

0.015° Accuracy, 50 CPS To 10 KC.

TYPE 209

Primary wideband standard, self-calibration, self-checking by means of fundamental bridge balancing, without the use of an external standard. Useful for measuring unknown networks, unknown signals, or checking phase meters. Traceable to NBS standards. Phase shift from 0° to 360° with 7 digit resolution.

INSTANTANEOUS PHASE DETECTOR

For Pulsed Signals Or CW Signals

TYPE 251

Measures instantaneous phase difference (from cycle to cycle) of pulsed or cw signals. Measures differential phase between steps of a video staircase signal. Measures phase angle between two pulse modulated sine waves or between a pulse modulated sine wave and a cw signal. Infinite resolution, 0.05° phase difference can be detected. Readability: ¼ ns. Operating Frequency: 200 kc to 15 mc. Minimum Input Signal: 50 millivolts.

MICROWAVE PHASE AND TIME DETECTOR

8.2 GC to 18 GC, ±1° or ±1% Accuracy.

TYPE 206B3-4

Accuracy unaffected by amplitude fluctuation. Measures pulse modulated or cw signals. Both input signals enter separate channels and are accurately terminated. Resolution: infinite. Minimum Input Signal: 50 millivolts for pulsed signals; 30 millivolts for cw signals. Frequency Response: 206B3—8.2 gc to 12.4 gc; 206B4—12.4 gc to 18 gc. Input Waveguide Size: 206B3—X-Band waveguide O.D. 1"x½" includes UG-39 / U Flange; 206B4—KU-Band 0.702 x0.391 includes UG-419 / U Flange.

UNHOLTZ-

Signal conditioning amplifiers for shock and vibration monitoring

This popular series of signal conditioning amplifiers features individual double shielded power supplies, a totally-enclosed-vinyl-clad case, portability of separate units, ultra low noise levels, frequency response to 100 kHz, and switchable low pass filters with an 18 dB/octave attenuation rate. They can be operated in the integral charge mode with direct connection to the piezoelectric transducer, or switched to the remote preamp mode for operation with either the two-wire charge type remote preamp or the two-wire voltage type remote preamp. Full scale ranges of .1 g to 10 Kg with accelerometer sensitivities from 1 pC/g to 100 pC/g are standard. Also offered is Option III full scale ranging to provide an extra gain of 10 for very low level measurements. Panel height is only 5¼ inches when standard edgewise meters are selected.

D11V SERIES

Model D11V
Tape output only
$525.00

Model D11MV
Tape and meter
$575.00

Model D11GV
Tape and galvo
$590.00

Model D11MGV
Tape, galvo, meter
$640.00

Basic D11V series permits operation with grounded transducers while eliminating usual ground loop problems. Differential circuitry provides rejection of common-mode signals by a factor of 1000. The two-wire remote preamps shown below can be used with any of the D11V series instruments.

OPTIONAL FEATURES

L	Log dc output with 60 dB dynamic range (requires meter feature)	$175.00
S	Normalized 10 mV/g servo output for full scale ranges up to 300 g	$50.00
O	1 kHz fixed amplitude, sine wave, internal calibration oscillator	$50.00
—8	Large meter with 2½ inch scale length and 8¾ inch panel height	$20.00
—2	Extended low frequency response flat within ±5% down to 0.5 Hz	$25.00

AUTORANGER SERIES

Model 811M
Range restorer
$1200.00

Model 11MAV
Tape and meter
$745.00

Model 11GAV
Tape and galvo
$760.00

Model 11MGAV
Tape, galvo, meter
$810.00

AUTORANGER series selects best of 3 adjacent full scale ranges. Pilot light and dc code signals indicate range selected. Range sequences of 1, 3, 10 . . ., or 10 dB steps, or 1, 10, 100, 1K are offered. Companion RANGE-RESTORER converts tape recorded data to original dynamic range. The two-wire remote preamps shown below can be used with any of the AUTORANGER instruments.

OPTIONAL FEATURES

S	Normalized 10 mV/g servo output for full scale ranges up to 1 Kg	$50.00
O	1 kHz fixed amplitude, sine wave, internal calibration oscillator	$50.00
F	Linear DC output for amplifiers supplied with meter feature	$25.00
—8	Large meter with 2½ inch scale length and 8¾ inch panel height	$20.00

SHOCK SERIES

Model 11TPM
Transient peak meter
$350.00

Model SA11TPM
Shock amplifier with tape and transient meter
$875.00

Model SA11G
Shock amplifier with adjustable galvo output
$615.00

Model SA11MG
Shock amplifier with galvo, and standard meter
$665.00

Shock amplifiers have selectable low and high frequency time constants for pulse durations from 100 microsec to 100 millisec. Reset feature and direct coupling provide rapid stabilization. Series shown at left can be intermixed with other series 11 instruments. Series described below are housed in a single portable carrying case that can be rack mounted as one, two or three units.

PORTABLE SHOCK INSTRUMENTS

Model SA11GO-3	Portable shock amplifier with galvo and internal oscillator
Model 11TPM-3	Portable transient peak meter for pulse measurements
Model 11RA-3	Rack adapter for 1 to 3 of the portable units above.

OPTIONAL FEATURES

1 kHz Osc. $50.00 10 mV/g Servo $50.00

Model V11MS $475.00
Tape, meter, servo
Economy model operates exclusively with two-wire remote charge or voltage preamp shown at right.
Galvo option $65.00
OSC option $50.00

Model 11CA-2 $90.00
Remote charge preamp
Will operate with any series D11V or Autoranger instrument.

Model 11PA-2 $50.00
Remote voltage preamp
Will operate with any series D11V or Autoranger instrument.

Series 11 instrument with —8 meter option.

Model 11P-2 $70.00
Dual channel Portable adapter
With 2 channels of series 11 instruments

Model 11RA Rack Adapter $150.00
With 6 channels of series 11 instruments

Model 11RA-8 Rack Adapter $175.00
With 6 channels of series 11 instruments with —8 meter options

Systems with TA in model number include all silicon, direct coupled, solid state power amplifiers.

MULTIPLE SHAKER SYSTEMS FOR LARGE LOADS, HIGH FORCE RATINGS, OR SPECIAL APPLICATIONS ARE AVAILABLE

Accessory instruments

Shaker system controls and protective functions

MULTIFUNCTION AVERAGING CONTROL
Model MAC-6C

Features: Phase insensitive averaging for at least 6 inputs ■ Allows averaged shaker system control for sine and random tests ■ Sine tests: absolute average of output yields average of input magnitudes ■ Random tests: spectral density of output yields average of input spectral densities ■ Freedom from detector time constant problems ■ DC output for recording ■ Units may be coupled for more than 6 inputs.

SERVO PROGRAMMERS
Models SP5 and SP2

Features: Combines functions of amplitude servo and vibration programmer in one instrument ■ Programmer contains up to five program segments with servo controlled acceleration, velocity or displacement selectable for each segment (SP5) ■ Simplified closed-loop presetting of vibration levels before actual test is performed ■ Optional safety shutdown at pre-set level of acceleration ■ Solid state, plug-in, printed circuit construction ■ Log dc output for X-Y recording of test

ACCELERATION CONTROL SELECTOR
Model ACS-6
Solid State Switching

Features: Automatically switches to highest (or lowest) accelerometer for amplitude servo control ■ Up to 6 input acceleration signals ■ Switching speed continuously variable with frequency ■ Weighted switching from .01 to 10 times nominal acceleration ■ Wide dynamic range ■ Pilot light indicates controlling channel.

Calibration systems for accelerometers

AUTOMATIC CALIBRATION SYSTEMS

Unholtz-Dickie automatic calibration systems, based on Model 106A shaker automatically plot accelerometer calibration curves of charge or voltage sensitivity vs. frequency to any level up to 100 g and 10 kHz. Original data is permanently plotted — eliminating operator error in readout and transcription. Continuous curve detects all variations, expansion or compression of vertical scale for optimum accuracy and readability of curves. One per cent accuracy of unknown accelerometer relative to reference.

ABSOLUTE CALIBRATION OPTICAL SYSTEM

Model DO-5000. New optical instrument gives digital readout of absolute displacement.

Piezoelectric accelerometers

Micro-miniature
0.8 grams

General purpose
high sensitivity

For accurate vibration measurements this D21 series of shear mode types insure freedom from case sensitivity and lowest cross axis sensitivity. A range of sizes covers most applications, down to a 0.65 gram subminiature model. This series uses Lead Ziconate-Titanate crystals. Also available are Bismouth composition crystals for high temperatures.

Complete information is available on all products. Write to Unholtz-Dickie.

PORTABLE high voltage testers

PORTABLE HIGH VOLTAGE POWER SUPPLIES
UVC standard portable power supplies, series "BAP" as shown (Photo A), offer the desirability of light weight, compact packaging and the flexibility of complete control instrumentation for field hi-pot testing. Availability is up to 32 KVDC and 40 milliamperes continuous duty on most models. Each supply is furnished with single range kilovolt meter and milliammeter; high voltage on and off pushbutton function with indicator lights; primary protective fuses and a fixed overload circuit.

At voltage ratings in excess of 32 KVDC, two packages are furnished, each offering the advantage of easy portability. These supplies are available at ratings up to 60 KVDC and utilize air insulation.

For non-destructive breakdown testing such as is required for coaxial cables, strain gauge equipment, capacitors and semi-conductors, UVC has introduced a line of multi-range, crow bar protected, suitcase style packaged portable power supplies (Photo B) at voltage ratings up to 45 KV. Each supply provides four modes of operation, selectable by means of a front panel control and the high voltage rises in each mode as an approximate ramp function up to its preset crest. Leakage current is also selected by means of a front panel control and should a preset value of current be exceeded, a crow bar circuit will be activated with response time in the order of less than 5 microseconds after initiation of breakdown. The kilovolt meter will hold the voltage reading at the point of breakdown indefinitely until the equipment is manually reset.

KILOVOLT METERS - HIGH VOLTAGE DIVIDERS
For precise high voltage measurement, UVC offers a complete line of 1% and 3% accuracy kilovolt meters (Photo C); 0.1% high voltage dividers as well as specially designed frequency compensated dividers (Photo D). Availability is up to 1000 KVDC.

STOCK AND CUSTOM TERMINATION HARDWARE
UVC offers specially designed termination hardware to minimize the effects of corona discharge. Standard shapes include cap nuts, toroids, spheres and cylinders (Photo E). These hardware items are used in all UVC high voltage and extra high voltage power supplies to reduce spacing requirements, and offer a more reliable high voltage design. Mounting tap sizes, materials and shape are not restricted to the standard configurations shown. We welcome the opportunity to discuss your special termination requirements.

Write or phone for Catalog UVC-670 containing complete specifications for the extensive line of UVC high voltage power supplies.

LABORATORY INSTRUMENTS

DIFFERENTIAL WATTMETER

Full Scale Range:	0-30 watts (available up to 100 watts and above with external transformers).
Differential Watt Range:	10, 100, and 1000 milliwatts.
Full Scale Accuracy:	±1% of reading, ±20 mW.
Differential Accuracy:	±0.04, 4.0 and 40mW.
Frequency Range:	200-3000 Hz at stated accuracy.

Input voltage can be any single voltage (single phase, 2-phase, 3-phase, 3- or 4-wire) from 10 to 120 V rms as specified by customer.

WRITE FOR BULLETIN 3021.

LOW-POWER LABORATORY WATTMETER

Models for single or polyphase low-power measurements where wattmeter burden must be extremely small.

Frequency Range:	50-2000 cps.
Accuracy:	±1% of full scale.
Current-circuit voltage-drop:	negligible.
Power Drain:	<than 0.2% of indicated power at unity PF.
Meter:	accurate to 10% PF without reconnection.
Full Scale Ranges:	(26 VAC) 0 to 1.2/3/12/30 watts F.S. (115 VAC) 0 to 1.2/3/12/30/120 watts F.S.

Temperature Coefficient: <.01%/°C.
Input Current: 0-1, 2.5, 5 and 10 A.

WRITE FOR BULLETIN 5020.

WATT TRANSDUCERS

Accuracy: 0.5% with ±25% line voltage and .1 to 0.5 PF.
Frequency Range: 50-3000 Hz.
Response Time: .25 second to 99%.
Input Elements: one (500W), two (1000W) and three (1500W).
Adjustable: 60 to 120%.

WRITE FOR BULLETIN 5030.

PF TRANSDUCERS

Accuracy: 0.1 PF at nominal voltage and 60% current.
PF Ranges: 0-1-0, 0.3-1-0.3, 0.5-1-0.5, and 0.7-1-0.7.
Nominal Frequency: 50-3000 Hz.
Input Voltage: 120V ±20%.
Input Current: 0-5 A.
Phases: Single and 3-phase.

WRITE FOR BULLETIN 5040.

FREQUENCY TRANSDUCERS

Accuracy: 0.5%
Input Frequency: 55-65, 58-62, 350-450 and 380-420 Hz.
Voltage: 100-130V.
Overload: 1.5 X rated input, continuous; 2 X rated input, one second.
Hipot: 1200 VAC.

WRITE FOR BULLETIN 5050.

VOLTRIP GO/NO-GO LIMIT-DETECTOR

A precise, stable voltage-sensing device that signals, by means of a contact closure, when the voltage, current or other parameter being monitored reaches a pre-determined value. Also available to sense frequency and watts.

Completely solid state except for relay.
External resistors extend functions to current and resistance.
Dual limit models available.
MIL versions available for −55° to 71°C operation.
Voltage Range: 5 to 500V rms, 50 to 2000 Hz.
Auxiliary Power Required: 3 watts at 115V, ±10%, 60-1200 Hz.
Response Time: 50 ms.

WRITE FOR BULLETIN 6033.

4½" SWITCHBOARD INSTRUMENTS

SEALED/RUGGEDIZED MILITARY & COMMERCIAL METERS

Many of the meters and accessory products described in these pages have been designed to conform to the requirements of the applicable military meter specifications or the unusual requirements of the environments in which they are to be used. This also provides significant benefits to those with industrial applications which commercial-grade meters do not fully satisfy.

GENERAL SPECIFICATION:

MOVEMENTS
D'Arsonval; U magnet, core magnet; moving iron vane, high strength ALNICO magnets standard.

ACCURACY
Standards as shown to the right, special accuracy ±1% or better available.

CASE/FINISH
5/8" and 1" aluminum with anodized finish. 7/8, 1½, 2½, 3½, 4½ steel cadmium-plated, iridite-treated.

MOUNTING
Standard hardware and mounting dimensions to appropriate military specifications.

SEALING
Watertight gasket sealing standard, epoxy or solder sealing available on some models.

TERMINALS
1/4-28 brass stud and solder lug construction.

SCALE/FINISH
Aluminum with black markings on white enameled background.

POINTER
Knife edge standard, lance or sword pointers available.

SHIELDING
Magnetically shielded construction for use on magnetic or non-magnetic panel.

WINDOW
High strength glass. Plastic or RFI shielded furnished on special applications.

RESISTANCE
Standard tolerances ±10%, special to ±1%.

PIVOTS & JEWELS
Springbacked jewels, osmium pivots standard.

SPECIAL METER DESIGNS

For special applications, WacLine offers a wide selection of custom design meters. Special features include:

Custom scale markings & logos • Mirrored scale • Self-contained multi-range designs • Expanded scale AC & DC Voltmeters • RFI shielding • Edge lighting • Dual meter configurations • Special terminal resistances • Special movement designs • Non linear movements • Suppressed zero ranges • High resistance Voltmeters • Vu & Db Meters.

Consult factory for Technical assistance on your custom design requirements.

The most widely used meters are described in the chart above to assist in the selection of the correct meter for each application.

Sizes and mounting dimensions meet requirements of MIL-M 10304 and MIL-M-17275 where applicable.

The availability of both round and square configurations in the most popular sizes offers greater flexibility in selecting a meter compatible with your styling requirements.

Write or call today for additional information on anyone of the models described.

THE PANORAMIC LINE

ast, accurate readings through reduction of parallax is but ne outstanding feature of Panoramic meters. Variety of possible pplications is almost limitless.

a. b.

a. Ordinary meter face shows erroneous reading due to parallax.
b. Panoramic design improvement reduces parallax for true reading.

till more idea of the completeness of WacLine models is rovided in this lineup. From the left, a 1" round position indicator, a 2" round meter with 110° scale, a 1½" round, a 2" round with 250° scale, and at right, two lighted edgewise meters.

PECIAL DESIGN METERS & ACCESSORIES

HUNTS

ightweight military shunts to meet MIL-S51 for direct current values to 1200 mperes. Special commercial and aircraft designs also available.

URRENT TRANSFORMERS

nly two of a wide variety of current ransformers produced by WacLine are shown. Single phase and three-phase odels are offered. These transformers xtend useful ranges for AC measurement of current and power.

ONVERTERS & RANSDUCERS

- Hall-generator Watt Converters
- Meter relays
- Frequency converters
- Power Factor & Phase Angle
- Control Relay circuits

EXTENSION—CASE METERS

A full line of self-contained electronic meters includes: • Expanded scale AC Voltmeters (True RMS and Average sensing) • Expanded scale DC Voltmeters • Expanded scale frequency meters • • Elapsed Time Indicators • Power Factor & Phase Angle meters • Watt/Var meters

COMMERCIAL PANEL METERS

All of the sealed and ruggedized meters produced by WacLine for military applications have commercial application. The same quality and reliability which is built into our military meters is offered in a variety of commercial styled meters as shown below.

TACHOMETER GENERATORS

Pancake-style self-generating Tachometer Generators in a variety of sizes, 1" to 6". Output signals of up to 500 volts/1000 RPM. Linear output when used with high impedance loads. Custom designs available.

FLIGHT INSTRUMENTS

WacLine has produced for a number of years a complete line of aircraft cockpit meters for both commercial jet airliners and general aviation aircraft. Past accomplishments in such techniques as integral lighting and self-contained electronic circuitry to measure a wide variety of signals has recently been further advanced by introduction of the new Panoramic low parallax instrument.

FOR MORE DETAILED INFORMATION ON SPECIAL DESIGN METERS AND ACCESSORY PRODUCTS, CONSULT THE FACTORY.

CARD OPERATED *Programmers*

These advanced concept card actuated reader-programmers have high current carrying capabilities and provide complex switching on each data bit.

Built around a new mechanical switching arrangement that features single pole, double throw switches with silver, self-wiping contacts and excellent dry circuit characteristics.

Proper design with attention to insulation, mechanical strength and positive actuation assure long service life. Card reader instantly interprets and activates all desired contacts simultaneously.

provide complex switching on each data bit

READER/ACTIVATOR CAPACITY: Model 240P: 240 bits/240 isolated SPDT switches. Model 960P: 960 bits/960 isolated SPDT switches. Model 96: 96 bits/96 isolated SPDT switches.

DATA MEDIUM: Standard 12 x 80 EAM CARD (IBM format). Model 240: Utilizes total card data capacity by reading four, 12 x 20 bit zones (two zones each end of card). Model 950: Reads total 960 bit card simultaneously.

SWITCH CONTACT CONFIGURATION: Standard: Form A — SPST normally open. Form B — SPST normally closed. Form C — SPDT non-shorting. Form D — STDT shorting. Each of the standard configurations available on any bit within the programmer. Special switching per customer specifications.

SWITCH CONTACTS: Silver alloy, double-action, self-cleaning. Contact-to-contact resistance 0.003 to 0.015 ohms. Excellent dry circuit characteristics.

SWITCH CONTACT ELECTRICAL RATING: (Resistance load). Break 2 amperes at 28 Vdc; break 1 ampere at 110 Vac; and continuously carry 5 amperes.

PROGRAMMER ACTUATION: Model 240P and Model 960P are available motor driven only.

MOUNTING: Bench (horizontal) or rack (vertical) 10″ W, 15″ H, 13″ D.

NEMA ENCLOSURE: 14″ D, 7¾″ W, 13″ H.

SPECIALS: to customer specifications.

W R E

DIGITAL SCALER INSTRUMENTATION

- ★ 3 significant figure in-line digital presentation
- ★ Within 1% of indicated value on all measurements
- ★ Passive solid state circuitry for long term stability
- ★ Automatic, fail-safe resettable protection system
- ★ Rugged, militarized, self-contained portables

MODEL 320, IN BENCH CASE

DIGITAL TRUE RMS

Model 320 . . . Precise digital readout of the RMS value of complex waveforms containing both AC and DC components and with crest factors as great as 10 to 1. Accurate to within 1% of indicated value from 100 mv to 1000V. Freq. Resp.: 20 Hz to 100 kHz.
(Shown in bench case) Supplied in fiberglass lab case 10″ x 6½″ x 3¼″, 4½ lbs. net.

DIGITAL MULTIMETER

Model 300 . . . 3 figure digital. All readings within 1% of indicated. AC or DC voltage: 100 mv to 1000V; response 10 Hz to 100 kHz calibrated in RMS value of sine wave. DC current: 10 μA to 10 A. Resistance 1Ω to 1 MΩ (wheatstone bridge with direct digital readout). Resettable overload protection system. Supplied in waterproof, fiberglass case 10″ x 7¼″ x 4¾″, 6¾ lbs. net. Model 300M (Militarized) for use in extreme environments.

MODEL 300, IN FIELD CASE

MODEL 310, IN RACK MOUNT

DIGITAL DC VOLTMETER

Model 310 . . . Readability, repeatability and within 1% of accuracy of actual readout — at a price of conventional analogs.
3 significant figure indication 100 mv to 1000V DC. (Shown in 19″ rack panel) supplied in fiberglass lab case, 3¾ lbs.
Model 311 available same except overload protection non-resettable.

Adapters available for DC & AC current and transistor testing.

TRANSMISSION LEVEL (dbm) *METER*

Model 332 . . . For measuring and setting transmission level. Direct reading in dbm for 600 and 900 ohm sources. (0 dbm = 1 milliwatt) 3 digit readout of —20.0 to +20.0 dbm, within ±0.1 db. Range to —35 dbm analog. Freq. response: 10 Hz to 100 kHz. RMS responding. Fail safe resettable overload protection. Fiberglass lab case shown, 10″ x 6½″ x 3¼″.

MODEL 332, IN LAB CASE

Nickel-Cadmium and Silver-Zinc Battery Charger/Analyzer Systems

W R E

MODEL 1575 *Nickel-Cadmium System*

This battery charger-analyzer concept is thoroughly design tested as a system to provide maximum efficiency in programmed maintenance of nickel-cadmium batteries.

Required sequence of events is unitized in a functional package to increase work flow efficiency with minimum equipment. Since all units can function simultaneously, single system has capacity for 3 batteries at a time; i.e., one discharging, one charging, and one under evaluation.

Exhaustive tests have proven this system to assure a full charge — safely! . . . and provide cell restandardization in the process.

Deep discharge of each cell assures total emptying of battery safely — with all cells to "zero". This standardizing effect assures a zero-base for each cell.

150% ampere-hour charge at precise prescribed rate assures "total-fill" of the battery.

Evaluation cycle "pulls" 100% of battery rated capacity in 2 hours. Analyzer automatically cuts off at either of 2 points . . . at preset voltage point, or at 2 hours . . . and "holds" the result.

ANALYZER, MODEL 1000 — Discharge Rate: 5 preselectable discharge current ranges: 1.8, 2.5, 5.5, 11, 17 amperes. Discharge Time: 0-2 hours, ±5%. Cut-off Voltage: Internally adjustable, 17-20 volts. Indicators: "Capacity Accept", "Capacity Reject", "Power On". Meters: 250°, 4½", ruggedized. Voltmeter: 0-40 volts. Ammeter: 2-range; 0-10, 0-20 amperes. Circuit: Solid state power switching. Physical: 19" W., 10½" H., 11" D., 33 lbs. Rugged, portable, rack mountable, drip-proof construction. Cooling is forced air.

CHARGER, MODEL 1500 — Charge Current: 5 preselectable ranges: 1.8, 2.5, 5.5, 11, 17 amperes, ±3%. Charge Time: 0-3 hours ±5%. Meters: 250°, 4½", ruggedized. Voltmeter: 0-40 volts. Ammeter: 2-range; 0-10, 0-20 amperes, Overload Protection: Charge terminates if output voltage rises above 33V on all ranges (except 2.5A range — 34.5V). Indicators: "Power On", "Charge Complete", "Abnormal Charge". Circuit: Solid state. Physical: 19" W., 10½" H., 11" D., 72 lbs. Rugged, portable, rack mountable, drip-proof. Cooling is forced air.

Popular discharge fixtures for fixed resistive load to each cell at the C/2 rate, and MA and MS type battery cables are available from stock. Other fixtures are available on special order.

Specifications subject to change without notice.

Overall system, rack and cabinet, is approximately 22" W., 4' H., 12" D., 192 lbs. and is of strong steel construction with drip-proof finish. Discharge fixtures and cables fit neatly into the compartmentized storage cabinet.

MODEL 1525 *Silver-Zinc Battery Charger*

Also charges Nickel-Cadmium, Silver-Cadmium, and Lead-Acid Types

The Model 1525 is a portable, 3-channel battery charger that meets the most stringent requirements for charging Silver-Zinc batteries (such as BB-451/U types).

The unit is designed with modular plug-in circuits and features a precision, solid state electronic control that permits front-panel programming of cut-off voltages in one-tenth volt steps, from 0.0 to 36.0 volts. This programming extends the capabilities so that the equipment may be used for charging Silver-Cadmium, Nickel-Cadmium or Lead-Acid battery types.

Each of the 3 channels may be used independently at currents of 1.0 or 2.25 amperes, or connected in parallel to provide up to nine different currents (up to 6.75 amperes).

Fail-safe charging indication is provided via internal sensing circuitry which assures that the programmed charging current is flowing when the charging lamp is lighted. The system automatically prevents damage to batteries or charger due to operator error.

Single cell charge capability permits charge equalizing of a battery. The 1525 is thoroughly militarized . . . including R.F.I. suppression.

Accessories furnished include 3 special charging handles for BB-451/U Silver-Zincs, and universal charging cables for other batteries. Cables, line cord and instruction manual are neatly stored in the case lid. Self-contained, water tight portable case; 13⅝" W., 11" H., 11½" D., 38 pounds net.

Specifications subject to change without notice.

Model 110 Function Generator

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Wavetek Model 110 Function Generator is a calibrated, high-purity source of sine, square and triangle waveforms. It is an all transistorized unit featuring complete plug-in printed circuit board construction, utilizing silicon semiconductors throughout. The Model 110 provides six simultaneous outputs over a dynamic frequency range of 0.005 Hz to 1 MHz. All outputs may be shorted simultaneously and the generator will continue to oscillate internally with less than 0.5% change in frequency. Its rugged construction, compact size and precision operating characteristics make the Model 110 a portable laboratory of test signals in one economical package.

VERSATILITY

Waveforms

Sine ∿, square ⊓, triangle ∧ and sync pulse.

Dynamic Frequency

0.005 Hz to 1 MHz (3.3 min. to 1 μsec).

Ranges

.01 = 0.005 Hz to 0.1 Hz
.1 = 0.05 Hz to 1 Hz
1.0 = 0.5 Hz to 10 Hz
10 = 5 Hz to 100 Hz
100 = 50 Hz to 1 kHz
1K = 500 Hz to 10 kHz
10K = 5 kHz to 100 kHz
100K = 50 kHz to 1 MHz

Six Simultaneous Outputs

∿, ⊓ or ∧ selectable with variable amplitude. Specs apply from 10% to 100% of max. amplitude setting.

50-Ω output impedance (600-Ω output impedance available by removing one jumper wire, with corresponding decrease in output amplitude).
30 V p-p max into 600-Ω load.
10 V p-p max into 50-Ω load.
Short circuit output current ±100 mA.
Model 110B: 5 V p-p into open circuit, 600-Ω output impedance.

2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ∿ 5 V p-p.
5. ∧ 5 V p-p.
6. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 through 5 are 500-Ω output impedance. Output voltage stated is into open circuit.

HORIZONTAL PRECISION

Dial Accuracy

±1% of full scale to 100 kHz.
±2% of full scale 100 kHz to 1 MHz.

Note: Dial is a high-quality composition pot, allowing true continuously variable frequency control.

Frequency Stability

Short term: Drift less than ±0.05% of setting for 10 min.
Long term: Drift less than ±0.25% of setting for 24 hr.
No critical components requiring internal oven.

Jitter

±0.025% cycle-to-cycle stability.

VERTICAL PRECISION

Frequency Response

Amplitude change with frequency less than 0.1 db 0.005 Hz to 100 kHz and 0.5 db 100 kHz to 1 MHz.

Peak-to-Peak Voltage Accuracy

±1% for outputs 3, 4 and 5.
±1% for output 1 at 30 V out.
±10% for output 2.

Amplitude Stability

Short term: ±0.05% of max p-p values for 10 min.
Long term: ±0.25% of max p-p values for 24 hr.

Symmetry

All waveforms are symmetrical about ground within ±1% of max p-p amplitude (zero adjust rear-panel control provided for output 1).

DC Offset Stability

Short term: ±0.05% of max p-p amplitude for 10 min.
Long term: ±0.25% of max p-p amplitude for 24 hr.

PURITY

Sine Wave Distortion

Less than:
0.5% 0.005 Hz to 10 kHz.
1.0% 10 kHz to 100 kHz.
2.0% 100 kHz to 600 kHz.
3.0% 600 kHz to 1 MHz.

Triangle Linearity

Greater than:
99% 0.005 Hz to 100 KHz.
95% 100 kHz to 1 MHz.

Square Wave Rise and Fall Time

Less than 10 nsec, output 2.
Less than 15 nsec, output 3.
Less than 100 nsec, output 1.

Total Aberrations

Less than 5% (overshoot, preshoot, etc.) when properly terminated.

Tilt

Less than 0.5%.

Time Symmetry (All Waveforms)

99.5% 0.005 Hz to 100 kHz.
99% 100 kHz to 1 MHz.

ENVIRONMENTAL

Temperature

All specifications listed, except stability, are for 25°C ±5°C.
For operation from 0°C to 55°C, derate all specifications by a factor of 2.

MECHANICAL

Dimensions

Model 110: 7¾ in. w, 5¼ in. h, 7½ in. d.
Model 110B: 7¾ in. w, 5¼ in. h, 11½ in. d.

Weight

7 lb net, 10 lb shipping.

Color

Clear anodized aluminum.

Controls

On-off power switch, frequency range switch, frequency dial, function selector switch, amplitude attenuator. Rear dc zero adjustment, 110; charge rate adjustment, 110B. All-silicon semiconductors, modular plug-in construction.

Power

Model 110: 105 V to 125 V or 200 V to 250 V, 50 Hz to 400 Hz. Less than 10 watts.
Model 110B: dc rechargeable ni-cad batteries provided with built-in charger. Fifteen hours of operation on batteries for every 16 hours of charge; simultaneous operation and charge. 105 V to 125 V or 200 V to 250 V, 50 Hz to 400 Hz. Less than 15 W.

Model 111 VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2

The Model 111 VCG is a precision source of sine, square, triangle and ramp waveforms. It offers control of frequency by external voltage—either dc programming or wideband ac frequency modulation. The instantaneous frequency of these waveforms is determined by the combination of the dial setting and the externally applied voltage. The VCG input is in parallel with the frequency dial. Set the dial at mid-frequency and increase the frequency with positive voltage or decrease it with negative voltage. Set the dial at the lowest point and increase frequency with positive voltage. Set the dial at the highest point and decrease frequency with negative voltage. Actually, the Model 111 VCG is a portable oscillator, square-wave generator, FM modulator, frequency shift keyer and sweep generator—all in one economical package.

VERSATILITY

Waveforms

Sine ∿, square ⊓, triangle ∧, ramp ⟋, and sync pulse.

Dynamic Frequency

0.0015 Hz to 1 MHz (10 min to 1 μsec). In 8 ranges X.3 range multiplier.

Seven Simultaneous Outputs

1. ∿, ⊓, ∧ or ⟋ selectable with variable amplitude. Specs apply from 10% to 100% of max amplitude setting.
   50-Ω output impedance. (600-Ω output impedance available by removing one jumper wire, with corresponding decrease in output amplitude.)
   30 V p-p max (15 V⟋) into 600-Ω load. 10 V p-p max (5 V⟋) into 50-Ω load. Short circuit output current ±100 mA.
   Model 111B: 5 V p-p into open circuit, 600-Ω output impedance.
2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ∿ 5 V p-p.
5. ∧ 5 V p-p.
6. ⟍ 0 V to −2.5 V ramp; 50% duty cycle.
7. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 thru 6 are 50-Ω output impedance. Output voltage stated is into open circuit.

VCG — Voltage-Controlled Generator

Over 20:1 frequency ratio (selectable in ranges of 3:1, allowing excellent range overlap). 4.75 V input for 20:1 frequency ratio (0.5 V per major dial division ±1%). Input impedance 10 kΩ.

HORIZONTAL PRECISION

Dial Accuracy

±1% of full scale to 100 kHz.
±2% of full scale 100 kHz to 1 MHz.

Electronic Frequency Vernier

One turn for one minor dial division.

Typical VCG Linearity

±0.1% frequency vs input voltage (frequency error 0.1% of total deviation—best straight-line method). 0.0015 Hz to 100 kHz generated frequency. From 10% to 100% of max dial frequency.

VCG Bandwidth

100 kHz.

Frequency Stability

Short term: Drift less than ±0.05% of setting for 10 min.
Long term: Drift less than ±0.25% of setting for 24 hr.

Jitter

±0.025% cycle-to-cycle stability.

VERTICAL PRECISION

Frequency Response

Amplitude change with frequency less than 0.1 db 0.0015 Hz to 100 kHz and 0.5 db 100 kHz to 1 MHz.

Peak-to-Peak Voltage Accuracy

±1% for outputs 3 through 6.
±1% for output 1 at 30 V out.
±10% for output 2.

Amplitude Stability

Short term: ±0.05% of max p-p values for 10 min.
Long term: ±0.25% of max p-p values for 24 hr.

Symmetry

All waveforms, except ramp, are symmetrical about ground within ±1% of max p-p amplitude (zero adjust rear-panel control provided for output 1).

DC Offset Stability

Short term: ±0.05% of max p-p am tude for 10 min.
Long term: ±0.25% of max p-p am tude for 24 hr.

PURITY

Sine Wave Distortion

Less than:
0.5% 0.0015 Hz to 10 kHz.
1.0% 10 kHz to 100 kHz.
2.0% 100 kHz to 600 kHz.
3.0% 600 kHz to 1 MHz.

Triangle and Ramp Linearity

Greater than:
99% 0.0015 Hz to 100 kHz.
95% 100 kHz to 1 MHz.

Ramp Fall Time

Less than 250 nsec.

Square Wave Rise and Fall Time

Less than 10 nsec, output 2.
Less than 15 nsec, output 3.
Less than 100 nsec, output 1.

Total Aberrations

Less than 5% (overshoot, presho etc.) when properly terminated.

Tilt

Less than 0.5%.

Time Symmetry (All Waveforms)

99.5% 0.0015 Hz to 100 kHz.
99% 100 kHz to 1 MHz.

ENVIRONMENTAL

Temperature

All specifications listed, except stat ity, are for 25°C ±5°C.

MECHANICAL

Dimensions

Model 111: 7¾ in. w, 5¼ in. h, 7½ in. d.
Model 111B: 7¾ in. w, 5¼ in. h, 11½ in. d.

Weight

7 lb, 10 lb shipping.

Controls

Off-X.3-X1 power/dial multiplier switc frequency range switch, frequency di frequency vernier, function select switch, amplitude attenuator. Rear zero adjustment, 111; charge rate a justment, 111B.

Model 112 Triggered VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Model 112 Triggered VCG offers precision control of frequency by external voltage—either dc programming or wideband ac frequency modulation. It also triggers from a manual front-panel control or from an external pulse or gate. One cycle is generated on command. If a gate signal is applied, the generator will operate until the gate is removed. The trigger start-stop point is adjustable over 360°. Trigger level and polarity may be selected from front-panel control. The Model 112 generates sine, square, triangle and ramp waves simultaneously in fixed-phase relationships. The frequency of these waveforms is determined by the combination of the dial setting and the externally applied voltage. The VCG input is in parallel with the frequency dial. The Model 112 Triggered VCG is a portable oscillator, square-wave generator, FM modulator, frequency shift keyer, sweep generator, and tone-burst generator. The Model 112 is a versatile, general-purpose instruments for laboratory and field use.

VERSATILITY

Waveforms
Sine ∿, square ⊓, triangle ∧, ramp ⟋, and sync pulse.

Dynamic Frequency
0.0015 Hz to 1 MHz (10 min to 1 μsec). With 8 ranges X.3 range multiplier.

Nine Simultaneous Outputs
∿, ∩, ⊓, ⊔, ∧, ⋀, ⟋ or ⟍ selectable with variable amplitude.
30 V p-p max (15 V⟋) into 600-Ω load.
10 V p-p max (5 V⟋) into 50-Ω load. Short circuit output current ±100 mA.
Model 112B: 5 V p-p into open circuit, 600-Ω output impedance.

2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ∩ 5 V p-p.
5. ∧ 5 V p-p.
6. ⟍ 0 V to −2.5 V ramp; 50% duty cycle.
7. ∩, ⊔, ⋀, or ⟋ selectable. 5 V p-p differential output 180° out-of-phase with outputs 2 through 6.
8. ∿ 2.5 V p-p offset +1.25 V.
9. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 thru 7 are 50-Ω output impedance. Output voltage stated is into open circuit.

Trigger
Input impedance is 10 kΩ.
Trigger mode: Manual or external voltage of ±0.5 V will generate one cycle.
Gated mode: Discrete number of cycles may be generated by application of ±0.5 V gate.
Up to 100 V may be applied without damage to input circuitry.
Trigger level and slope are adjustable by front-panel controls. (These controls are similar to trigger adjustments of an oscilloscope.)
The start-stop point of the generated waveform is adjustable through 360°. Haversine is available by adjusting trigger start control to the −90° position and using offset sine wave output 8.

VCG—Voltage-Controlled Generator
Over 20:1 frequency ratio (selectable in ranges of 3:1, allowing excellent range overlap). 4.75 V input for 20:1 frequency ratio (0.5 V per major dial division ±1%). Input impedance 10 kΩ.

Stability*
Short term: ±0.05% for 10 min.
Long term: ±0.25% for 24 hr.
*Percentages apply to amplitude, frequency and dc offset.

HORIZONTAL PRECISION

Dial Accuracy
±1% of full scale to 100 kHz.
±2% of full scale to 1 MHz.

Electronic Frequency Vernier
One turn for one minor dial division.

Typical VCG Linearity
±0.1% frequency vs input voltage (frequency error 0.1% of total deviation—best straight-line method). 0.0015 Hz to 100 kHz generated frequency. From 10% to 100% of max dial frequency.

VCG Bandwidth
100 kHz.

Jitter
±0.025% cycle-to-cycle stability.

VERTICAL PRECISION

Frequency Response
Amplitude change with frequency less than 0.1 db 0.0015 Hz to 100 kHz and 0.5 db 100 kHz to 1 MHz.

Peak-to-Peak Voltage Accuracy
±1% for outputs 3 through 7.
±1% for output 1 at 30 V out.
±10% for output 2.

Symmetry
All waveforms, except offset sine and ramp, are symmetrical about ground within ±1% of max p-p amplitude (zero adjust rear-panel control provided for output 1).

PURITY

Sine Wave Distortion
Less than:
0.5% 0.0015 Hz to 10 kHz.
1.0% 10 kHz to 100 kHz.

Model 113 Digital VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Model 113 Digital VCG is a precision source of sine, square, triangle and ramp waveforms. It offers pushbutton control of frequency, function and amplitude, plus voltage control of frequency by external input — either dc programming or wideband ac frequency modulation.

The amplitude is controlled by a precision 50-Ω attenuator that offers 10 db steps from 0.1 volt to 10 volts peak-to-peak. Both frequency and amplitude also may be controlled by vernier controls that allow overlap between the digitally selected values. Resolutions of the frequency vernier allows 4-digit control. Frequency pushbuttons may be switched over to a 1-turn control for frequency search.

A special pushbutton position is provided to give 30 volt peak-to-peak output with a vernier control. All waveforms are available by selection on the front panel output. Fixed amplitude outputs of each waveform also are available on the rear panel.

The Model 113 Digital VCG is a portable source of stimuli for laboratory or field use allowing ease of selection, accuracy and repeatability.

VERSATILITY

Waveforms
Sine ∿, square ⊓, triangle ∧, and ramp ⟋.

Dynamic Frequency
0.001 Hz to 1 MHz (15 min. to 1 μsec.)

Ranges
X.001 = 0.001 Hz to 0.01 Hz
X0.1 = 0.1 Hz to 1 Hz
X1.0 = 1 Hz to 10 Hz
X10 = 10 Hz to 100 Hz
X100 = 100 Hz to 1 kHz
X1K = 1 kHz to 10 kHz
X10K = 10 kHz to 100 kHz
X100K = 100 kHz to 1 MHz

Five Simultaneous Outputs
1. ∿, ⊓, ∧, or ⟋, 30 V p-p max into 600-Ω load (15 V⟋). precision attenuator providing 0.1, 0.3, 1, 3 and 10 V p-p into 50-Ω load with continuous vernier. Short circuit output current ±100 mA.
2. ⊓ 5 V p-p.
3. ∿ 5 V p-p.
4. ∧ 5 V p-p.
5. ⟍ 0 V to −2.5 V ramp; 50% duty cycle.

Note: Outputs 2 through 5 are 500-Ω output impedance. Output voltage stated is into open circuit.

VCG—Voltage-Controlled Generator
0.5 V input for frequency change of first significant digit (±1%). Up to 100:1 frequency ratio. Input impedance 10 kΩ.

HORIZONTAL PRECISION

Frequency Accuracy
1% of selected frequency, 0.001 Hz to 100 kHz.
2% of selected frequency, 100 kHz to 1 MHz.

Typical VCG Linearity
±0.1% frequency vs. input voltage (frequency error 0.1% of total deviation—best straight-line method) 0.001 Hz to 100 kHz generated frequency.

VCG Bandwidth
100 kHz.

Frequency Stability
Short term: Drift less than ±0.05% of setting for 10 min.
Long term: Drift less than ±0.25% of setting for 24 hrs.
No critical components requiring internal oven.

Jitter
±0.025% cycle-to-cycle stability.

VERTICAL PRECISION

Frequency Response
Amplitude change with frequency less than 0.1 db, 0.001 Hz to 100 kHz and 0.5 db, 100 kHz to 1 MHz.

Peak-to-Peak Voltage Accuracy
±1% of selected output. 0.1 V to 10 V p-p into precision 50-Ω load.
±1% for outputs 2 through 5.

Amplitude Stability
Short term: ±0.05% of max p-p values for 10 min.
Long term: ±0.25% of max p-p values for 24 hrs.

Symmetry
All waveforms, except ramp, are symmetrical about ground within ±1% of max p-p amplitude (zero adjust rear panel control provided for output 1).

DC Offset Control
Front panel vernier may be switched in for up to ±5 V dc offset on output 1; dc offset plus ac signal limited to ±15 V peak.

DC Offset Stability
Short term: ±0.05% of max p-p amplitude for 10 min.
Long term: ±0.25% of max p-p amplitude for 24 hrs.

PURITY

Sine Wave Distortion

Model 114 Sweep–Trigger VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Model 114 is two independent generators in a single compact unit. The first generator is a precision source of sine, square and triangle waveforms. The second is a ramp generator for sweeping the frequency of the first. Both generators may be operated continuously or triggered with independent frequency control. In the triggered mode, the start-stop point may be continuously varied through 360°. Also, sine² pulses are available from the offset sine output in the triggered mode. A unique feature of the Model 114 is the sweep-and-hold mode which allows static setting of both start and stop frequency. In addition to internal sweep control, terminals are provided for external voltage control of frequency (VCG) — either dc programming or wideband ac frequency modulation. The Model 114 Sweep-Trigger VCG is a portable oscillator, square-wave generator, FM modulator, frequency shift keyer, sweep generator and tone-burst generator. The Model 114 is a versatile, general-purpose instrument for both laboratory and field use.

VERSATILITY

Waveforms

Sine ∿, square ⊓, triangle ∧, offset sine ∿₀, and sync pulse.

Dynamic Frequency

0.0015 Hz to 1 MHz (10 min to 1 μsec).

Nine Simultaneous Outputs

∿, ∩, ⊓, ⊔, ∧, ∩̸, ∿₀, or ∩°̸ selectable with variable amplitude. Specs apply from 10% to 100% of max amplitude setting.

50-Ω output impedance.

30 V p-p max (15 V ∿₀) into 600-Ω load. 10 V p-p max (5 V ∿₀) into 50-Ω load. Short circuit output current ±100 mA.

Model 114B: 5 V p-p into open circuit, 600-Ω output impedance.

2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ∿ 5 V p-p.
5. ∧ 5 V p-p.
6. ∩°̸ 2.5 V p-p offset −1.25 V.
7. ∿, ⊓, ∧, or ∿₀ selectable. 5 V p-p differential output 180° out-of-phase with outputs 2 through 6.
8. Sweep monitor (output of sweep generator), 2.5 V nominal.
9. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 thru 7 are 50-Ω output impedance. Output voltage stated is into open circuit.

OPERATIONAL MODES

Continuous Mode—Operates as a standard VCG. Frequency determined by dial/range settings parallel with VCG input.

Trigger Mode—One complete cycle is generated by activating the manual trigger or applying a pulse or gate to the trigger input.

Sweep and Hold Mode—Generator runs at the selected frequency until triggered by the manual trigger or external pulse. When thus activated, the unit sweeps to a new frequency determined by the sweep-width control and holds this frequency until manually reset.

Continuous with Sweep Mode—Main generator continuously swept from frequency selected by main dial to upper frequency selected by width control.

Trigger with Sweep Mode—No output is generated until manual trigger is activated or trigger input is applied. The unit starts at the frequency selected by the dial and range settings and sweeps to a frequency controlled by the sweep-width control. The generator stops oscillating at this point and will not restart until triggered again. Tone-burst operation may be obtained in this mode by setting the sweep-width control to zero; the number of cycles generated for each trigger applied is determined by sweep-rate controls.

Trigger Controls

Input impedance is 10 kΩ. Input voltage is ±0.5 V to ±100 V. Trigger level and slope are adjustable by front-panel controls. Start-stop point of the waveform is adjustable through 360°.

Sweep Controls

Sweep width is adjustable from 0 to 100:1.

VCG — Voltage-Controlled Generator

Over 20:1 frequency ratio (selectable in ranges of 3:1, allowing excellent range overlap). 4.75 V input for 20:1 frequency ratio (0.5 V per major dial division ±1%). Input impedance to kΩ.

Models 115 & 116 Trigger—Phase Lock VCGs

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-22
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-20

The Models 115 and 116 generators produce sine, square, triangle and ramp waveforms with trigger and phase-lock capabilities. In addition, the 116 provides tone burst operation giving discrete bursts of signal from 2 to 256 cycles in binary increments. The VCG feature offers precision control of frequency by external voltage, either dc programming or wide band ac frequency modulation. Trigger capability allows triggered or gated operation from an external pulse or gate and single cycle operation (or tone burst, Model 116) by manual push button. Phase-lock operation converts the generator to a slave unit where the frequency is locked to an external frequency input, such as a crystal or master system clock; the relative phase of the two sources is controllable over 360°. The combination of features in these compact portable instruments makes either one virtually indispensable for field or laboratory tests and design operations.

VERSATILITY

Waveforms

Sine ∿, square ⊓, triangle ∧, ramp ⟋, and sync pulse.

Dynamic Frequency

0.0015 Hz to 1 MHz (10 min to 1 μsec).

Nine Simultaneous Outputs

1. ∿, ∩, ⊓, ⊓, ∧, ∩, ⟋ or ⟍ selectable with variable amplitudes. Specs apply from 10% to 100% of max amplitude setting. 50-Ω output impedance. 30 V p-p max (15 V⟋) into 600-Ω load. 10 V p-p max (5 V⟋) into 50-Ω load.

Models 115B and 116B: 5 V p-p into open circuit, 600-Ω output impedance.

2. ⊓ 1 V p-p.
3. ⊓ 5 V p-p.
4. ∿ 5 V p-p.
5. ∧ 5 V p-p.
6. ⟍ 0 V to −2.5 V ramp; 50% duty cycle.
7. ∿, ⊓, ∧, or ⟋ selectable. 5 V p-p differential output 180° out-of-phase with outputs 2 through 6.
8. ∿₀ 2.5 V p-p offset +1.25 V.
9. Sync pulse: At least −10 V into open circuit; less than 5 μsec duration.

Note: Outputs 2 thru 7 are 50-Ω output impedance. Output voltage stated is into open circuit.

VCG—Voltage-Controlled Generator

Over 20:1 frequency ratio (selectable in ranges of 3:1, allowing excellent range overlap). 4.75 V input for 20:1 frequency ratio (0.5 V per major dial division ±1%). Input impedance 10 kΩ.

Trigger

Input impedance is 10 kΩ.

Trigger mode: Manual or external voltage of ±0.5 V will generate one cycle.

Gated mode: Discrete number of cycles may be generated by application of +0.5 V gate.

Up to 100 V may be applied without damage to input circuitry.

Trigger level and slope are adjustable by front-panel controls.

The start-stop point of the generated waveform is adjustable through 360°. Haversine is available by adjusting trigger start control to the −90° position and using the offset sine-wave output 8.

Phase Lock

Frequency range is 10 Hz to 1 MHz.

Input impedance is 10 kΩ.

Input amplitude requirements are minimum 800 mV p-p to lock and 5 V p-p sine wave for specified accuracy.

An input of 100 V will not damage circuitry. Unit will frequency lock to any input within 10 to 1 of dial frequency and will be phase locked to the fundamental of the dial frequency within specified accuracy. Phase accuracy is ±10° from 10 Hz to 10 kHz.

Indicator "phase uncalibrated" light illuminates when selected phase relationship is exceeded. Unit will maintain frequency lock even when light is on.

Tone Burst (Model 116 only)

Tone burst may be generated automatically on command in the trigger mode. Selectable from a front-panel control, the unit will generate 1, 2, 4, 8, 16, 32, 64, 128 and 256 discrete cycles. The unit may be gated from an external voltage and a discrete number of cycles may be generated by selection of the proper gate length (see Trigger).

STABILITY*

Short term: ±0.05% for 10 min.

Long term: ±0.25% for 24 hr.

*Percentages apply to amplitude, frequency a dc offset.

Model 130 Oscillator/Function Generator

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Wavetek Model 130 is the first general-purpose laboratory test instrument that offers true function generator versatility for the low price of an oscillator. This attractive, all-solid-state unit is a high-purity source of sine, square, and triangle waveforms which can be generated over a frequency range of 0.2 Hz to 2 MHz. The outputs are selectable and variable from a 50-ohm source with an auxiliary sync output for scope and system timing. The instrument is ideal for ultrasonic, audio, and video applications — from troubleshooting to robotic IC design. Rugged construction, compact size, and precision operating characteristics make the Model 130 a portable laboratory of test signals in the economical package.

Model 131 Oscillator/VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-22
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-20

The Model 131 Voltage Controlled Generator (VCG) is a precision source of sine, square, and triangle waves that may be externally voltage controlled. The frequency may be modulated or dc-programmed; the instantaneous resultant frequency is the sum of the dial setting and the externally applied voltage. A positive voltage increases frequency and a negative voltage decreases frequency. The output waveforms (from 0.2 Hz to 2 MHz) are selectable and variable from a 50Ω source and an auxiliary sync output is available for scope or system timing. The Model 131 can be swept over a 1000:1 ratio and is designed so that the audio range of 20 Hz to 20 kHz may be covered in a single sweep without changing ranges. Rugged construction, compact size, and precision operating characteristics make the Model 131 a portable laboratory of test signals. Actually it is an oscillator, square wave generator, FM modulator, frequency-shift keyer, and sweep generator, all in one economical package.

VERSATILITY

Waveforms

Sine ∿, square ⊓, and triangle ∧.

Dynamic Frequency Range

0.2 Hz to 2 MHz.

Ranges

X10	0.2 Hz to 20 Hz
X100	2 Hz to 200 Hz
X1K	20 Hz to 2 kHz
X10K	200 Hz to 20 kHz
X100K	2 kHz to 200 kHz
X1M	20 kHz to 2 MHz

Output

Sine ∿, square ⊓, and triangle ∧, selectable; amplitude variable over 40 dB; 50Ω output impedance (600Ω available); 20 V p-p into open circuit and 10 V p-p into 50Ω load from 50Ω source impedance.

Sync Output

Greater than 1 V p-p square wave into open circuit at 600Ω output impedance.

DC Offset

±5 V offset (±2.5 V offset into 50Ω load) controlled from rear panel; peak amplitude limited by the dynamic range of the amplifier output.

VCG — Voltage Controlled Generator

Frequency of generator may be dc-programmed or ac-modulated by external 0 to 5 V signal. Voltage control circuitry is capable of 1000:1 deviation. The VCG amplifier has a 100 kHz bandwidth and a slew rate of 0.1 V/μsec. The instantaneous frequency is the result of the sum of the dial setting and the externally applied voltage.

NOTE: It is possible to stop the generator from oscillating by applying a negative voltage when the dial is already set at minimum frequency.

Stability

Model 134 Sweep/Trigger VCG

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Model 134 Sweep Generator is actually two independent generators in one compact unit. The first generator is a precision voltage controlled generator with sine, square and triangle waveform outputs. The second generator is a triggered ramp and sawtooth generator which supplies the voltage for sweeping the frequency of the first. Both generators may be operated independently in the continuous or triggered mode with independent frequency control.

In addition to internal sweep, terminals are provided for external voltage control of frequency (VCG) — either dc-programmed or wideband ac modulation. The instantaneous resultant frequency is the sum of the dial setting and the externally applied voltages; positive voltage increases frequency and negative voltage decreases frequency. The Model 134 can be used in continuous, triggered, gated, continuous with sweep, triggered with sweep, or tone burst modes. The output waveforms, from 0.2 Hz to 2 MHz, are selectable and variable from a 50Ω source. The sweep output (0 to +5 volts) is proportional to the frequency of the main generator when in the sweep mode. The instrument may be swept over a 1000:1 ratio and is so designed that the entire audio band from 20 Hz to 20 kHz may be covered without range change.

While the Model 134 is designated a Sweep/Trigger VCG, it also is a portable oscillator, square wave generator, FM modulator, frequency shift keyer, and sweep and tone-burst generator.

VERSATILITY

Waveforms
Sine ∿, square ⊓, triangle ∧, and sweep ⟋.

Dynamic Frequency Range
0.2 Hz to 2 MHz.

Ranges

X10	0.2 Hz to 20 Hz
X100	2 Hz to 200 Hz
X1K	20 Hz to 2 kHz
X10K	200 Hz to 20 kHz
X100K	2 kHz to 200 kHz
X1M	20 kHz to 2 MHz

Output
Sine ∿, square ⊓, triangle ∧, and sweep ⟋, selectable; amplitude variable over 40 dB; 50Ω output impedance (600Ω available); 20 V p-p into open circuit and 10 V p-p into 50Ω load from 50Ω source impedance.

Sync Output
Greater than 1 V p-p square wave into open circuit at 600Ω output impedance.

DC Offset
±5 V offset (±2.5 V offset into 50Ω load) controlled from rear panel; peak amplitude limited by the dynamic range of the amplifier output.

VCG — Voltage Controlled Generator
Frequency of generator may be dc-programmed or ac-modulated by external 0 to 5 V signal. Voltage control circuitry is capable of 1000:1 deviation. The VCG amplifier has a 100 kHz bandwidth and a slew rate of 0.1 V/μsec. The instantaneous frequency is the result of the sum of the dial setting and the externally applied voltage.

NOTE: It is possible to stop the generator from oscillating by appliyng a negative voltage when the dial is already set at minimum frequency.

Stability

Short term	±0.05% for 10 minutes.
Long term	±0.25% for 24 hours.

Percentages apply to amplitude, frequency and dc offset.

OPERATIONAL MODES

Continuous*
Operates as a standard VCG. Frequency determined by dial/vernier/range settings in parallel with VCG input.

Trigger**
One complete cycle is generated by applying a pulse to the trigger input.

Gated**
Same as trigger except that cycles continue for the duration of input gate.

Continuous Sweep
The main generator is frequency modulated by the sweep generator. When swept, the main generator frequency rises from the frequency set by the dial and range settings to a frequency selected by the sweep-width controls. Sweep rate is set by panel controls.

Trigger Sweep
Same as continuous sweep mode except one complete sweep cycle is generated for each input trigger pulse. Main generator continues to oscillate between sweep cycles.

Tone-Burst
Main generator is gated by the sweep output (internally connected). The tone-burst rate, frequency, and length can be independently controlled.

Trigger Input
1 V peak into 10 kΩ impedance dc coupled to 200 kHz, proportionally greater at higher frequencies.

Sweep Time
10 μsec to 100 sec.

Sweep Width
Up to 1000:1 with calibrated control.

HORIZONTAL PRECISION

Dial Accuracy
±2% of full scale 1 Hz to 2 MHz.

Frequency Vernier
On turn equals 1% of full scale.

Time Symmetry
±1% through X100K range.

VERTICAL PRECISION

Sine Wave Frequency Response
Amplitude change with frequency less than:
0.1 dB from 0.2 Hz to 200 kHz.
0.5 db from 0.2 Hz to 2 MHz.

PURITY

Sine Wave Distortion
Less than:
0.5% on X10, X100, X1K, X10K ranges
1.0% on X100K range
2.0% on 1M Hz range

Square Wave Rise and Fall Time
Less than 100 nsec.

ENVIRONMENTAL

Temperature
All specifications listed, except stability are for 25°C ±5°C. For operation from 0°C to 55°C, derate all specifications by factor of 2.

MECHANICAL

Dimensions
8½ in. w., 5¼ in. h., 11½ in. d.

Weight
8 lb. net, 11 lb. shipping.

Power
105 V to 125 V or 200 V to 250 V, 50 Hz to 400 Hz. Less than 20 watts.

NOTE: All specifications apply for frequencies obtained when dial is between 0.1 and 2 and at 10 V p-p into a 50Ω load. Prices and specifications subject to change.
*Both generators free run.
**Sweep generator free runs, main generator is triggered or gated.

Model 135 Lin/Log Sweep Generator

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-220
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-200

The Model 135 LIN/LOG Sweep Generator produces sine, square, and triangle waveforms which may automatically be swept in frequency up to a 1000:1 ratio. The Model 135 is actually two independent generators in one compact unit. The first generator is a precision voltage controlled generator with sine, square, and triangle waveform outputs. The second generator is a triggered ramp and sawtooth generator which applies the voltage for sweeping the frequency of the first in either a linear or logarithmic mode. Both generators may be operated independently in the continuous or triggered mode with independent frequency control.

In addition to internal sweep, terminals are provided for external voltage control of frequency (VCG) — either dc-programmed or wideband ac modulation. The instrument may be swept over a 1000:1 ratio and is so designed that the entire audio band from 20 Hz to 20 kHz may be covered without range change.

The frequency sweep may be selected as either a linear function for use in narrow band linear sweep applications, or logarithmic function, normally used in wideband (1000:1) sweep testing.

This versatile instrument also features a voltage output (GCV) that is proportional to the instantaneous frequency of the generator. This output can be used as the calibrated horizontal drive for an oscilloscope or an X-Y recorder.

VERSATILITY

Waveforms

Sine ∿, square ⊓, triangle ∧, and sweep ⟋.

Dynamic Frequency Range

0.2 Hz to 2 MHz.

Ranges

X10	0.2 Hz to 20 Hz
X100	2 Hz to 200 Hz
X1K	20 Hz to 2 kHz

X100K	2 kHz to 200 kHz
X1M	20 kHz to 2 MHz

Output

Sine ∿, square ⊓, triangle ∧, and sweep ⟋, selectable; amplitude variable over 40 dB; 50Ω output impedance (600Ω available); 20 V p-p into open circuit and 10 V p-p into 50Ω load from 50Ω source impedance.

GCV Output

Zero to 5 V (maximum limits) proportional to the frequency of the main generator. Output impedance 600Ω.

Sync Output

Greater than 1 V p-p square wave into open circuit at 600Ω output impedance.

DC Offset

±5 V offset (±2.5 V offset into 50Ω load) controlled from rear panel; peak amplitude limited by the dynamic range of the amplifier output.

VCG — Voltage Controlled Generator

Frequency of generator may be dc-programmed or ac-modulated by external 0 to 5 V signal. Voltage control circuitry is capable of 1000:1 deviation. The VCG amplifier has a 100 kHz bandwidth and a slew rate of 0.1 V/μsec. The instantaneous frequency is the result of the sum of the dial setting and the externally applied voltage.

NOTE: It is possible to stop the generator from oscillating by applying a negative voltage when the dial is already set at minimum frequency.

Stability

Short term	±0.05% for 10 minutes
Long term	±0.25% for 24 hours

Percentages apply to amplitude, frequency, and dc offset.

OPERATIONAL MODES

Continuous*

Operates as a standard VCG. Frequency determined by dial/vernier/range settings in parallel with VCG input.

Trigger**

One complete cycle is generated by applying a pulse to the trigger input.

Gated**

Same as trigger except that cycles continue for the duration of input gate.

Continuous Sweep

The main generator is frequency modulated by the sweep generator. When swept, the main generator frequency rises from the frequency set by the dial and range settings to a frequency selected by the sweep-width control. Sweep rate and sweep function (LIN or LOG) are selected by front panel controls.

Trigger Sweep

Same as continuous sweep mode exce one complete sweep cycle is generat for each input trigger pulse. Main ge erator continues to oscillate betwe sweep cycles.

Tone-Burst

Main generator is gated by the swe output (internally connected). The ton burst rate, frequency, and length can b independently controlled.

Trigger Input

1 V peak into 10 kΩ impedance c coupled to 200 kHz proportional greater at higher frequencies.

Sweep Time

10 μsec to 100 sec.

Sweep Width

Up to 1000:1 with front panel control.

HORIZONTAL PRECISION

Price (FOB San Diego)

Model 135 — $695

Model 136 VCG/VCA Generator

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Model 136 VCG/VCA Generator is a precision source of sine, square, and triangle waveforms that may be externally voltage controlled in amplitude (VCA) and in frequency (VCG). The amplitude level can be continuously controlled from dc step programming through 100% amplitude modulation to suppressed carrier AM. The frequency can be continuously controlled either by dc programming or by wideband modulation up to a 1000:1 ratio.

The Model 136 is actually as oscillator, square wave generator, triangle wave generator, and an AM-FM generator in one rugged compact package. The versatility and precision operating characteristics of the instrument make it a portable laboratory of test signals that can be used as a CW signal generator, tone-burst generator, frequency shift keyer, sweep generator, and a dc programmable generator.

VERSATILITY

Waveforms

Sine ∿, square ⊓, and triangle ∧.

Dynamic Frequency Range

0.2 Hz to 2 MHz.

NOTE: The fixed unmodulated) sine waveform can be used to self-modulate the generator and extend the frequency range to 4 MHz.

Ranges

X10	0.2 Hz to 20 Hz
X100	2 Hz to 200 Hz
X1K	20 Hz to 2 kHz
X10K	200 Hz to 20 kHz
X100K	2 kHz to 200 kHz
X1M	20 kHz to 2 MHz

Outputs

Sine ∿, square ⊓, and triangle ∧ selectable with 60 dB step attenuator in 10 dB steps, and overlapping vernier control, 50Ω output impedance; 20 V p-p into open circuit and 10 V p-p into 50Ω load.

Fixed Sine Output

2.5 V p-p (fixed) into an open circuit. This output is unaffected by any amplitude modulation signal.

Sync Output

Greater than 1 V p-p square wave into open circuit at 600Ω output impedance.

VCA — Voltage Control of Amplitude

DC Offset

±5 V offset (±2.5 V offset into 50Ω load) controlled from rear panel; peak amplitude limited by the dynamic range of the amplifier output.

Amplitude of the generator may be dc-programmed or ac-modulated by a 0 to 5 volt signal. The voltage control circuitry is bipolar and operates linearily over a 40 dB range. The VCA bandwidth is 4 MHz. The output amplitude at any time is determined by the output attenuator, the step attenuator, and any externally applied voltage.

VCG — Voltage Controlled Generator

Frequency of generator may be dc-programmed or ac-modulated by external 0 to 5 V signal. Voltage control circuitry is capable of 1000:1 deviation. The VCG amplifier has a 100 kHz bandwidth and a slew rate of 0.1 V/μsec. The instantaneous frequency is the result of the sum of the dial setting and the externally applied voltage.

NOTE: It is possible to stop the generator from oscillating by applying a negative voltage when the dial is already set at minimum frequency.

Stability

Short term ±0.05% for 10 minutes
Long term ±0.25% for 24 hours.
Percentages apply to amplitude, frequency, and dc offset.

HORIZONTAL PRECISION

Dial Accuracy

±2% of full scale, 1 Hz to 2 MHz.

Frequency Vernier

One turn equals 1% of full scale.

Time Symmetry

±1% through X100K range.

VERTICAL PRECISION

Sine Wave Frequency Response

Amplitude change with frequency less than:
0.1 dB from 0.2 Hz to 200 kHz.
0.5 dB from 0.2 Hz to 2 MHz.

PURITY

Sine Wave Distortion

Less than:
0.5% on X10, X100, X1K, X10K ranges.
1.0% on 100K range.
2.0% on X1M Hz range.

Square Wave Rise and Fall Time

Less than 100 nsec.

ENVIRONMENTAL

Temperature

All specifications listed, except stability, are for 25°C ±5 C. The generator will operate from 0°C to 55°C.

MECHANICAL

Dimensions

8½ in. w., 5¼ in. h., 11½ in. d.

Weight

8 lb. net, 12 lb. shipping.

Power

105 V to 125 V or 200 V to 250 V, 50 Hz to 400 Hz. Less than 15 watts.

NOTE: All specifications apply for frequencies obtained when dial is between 0.1 and 2 and at 10 V p-p into a 50Ω load. Prices and specifications subject to change.

Model 142 HF VCG Generator

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Model 142 HF VCG Generator is a precision signal source . . . providing full capability for present needs and reserve capability for future needs. This instrument features a broad frequency range (extending from 0.0005 Hz to 10 MHz) coupled with unprecedented waveform versatility.

In addition to the sine, square, and triangle waveforms usually offered, the Model 142 provides a variable duty cycle and dc offset on all output waveforms. The duty cycle of the output can be continuously adjusted from a low of 5% through the usual 50%, to a high of 95%. This means that pulse outputs can be generated with on-off ratios of 1:19, 19:1, or anywhere between. A sawtooth waveform with a rise-fall ratio of 1:19, 19:1, or anywhere between, also is possible.

Greater versatility in output amplitude is also offered by the Model 142. In addition to the higher power output of a full 15 volts p-p into 50 ohms, the 60 dB step attenuator allows clean signal levels as low as 15 millivolts peak to peak.

An external sweep signal (either dc programming or ac modulation) can be applied to the Model 142 to sweep the output frequency over a 1000:1 ratio.

VERSATILITY

Waveforms

Sine ∿, square ⊓, triangle ∧, positive pulse ⎍, negative pulse ⎏. Continuously variable time symmetry (duty cycle) of all waveforms from 19:1 to 1:1 to 1:19, resulting in pulses with variable duty cycle and ramp sawtooth waveforms with variable rise and fall times. Also separate sync output.

Operating Frequency Range

0.0005 Hz to 10 MHz.

Frequency Ranges

X.001	0.0005 Hz to .01 Hz
X.01	0.005 Hz to .1 Hz
X.1	0.05 Hz to 1 Hz
X1	0.1 Hz to 10 Hz
X10	1 Hz to 100 Hz
X100	10 Hz to 1 kHz
X1K	100 Hz to 10 kHz
X10K	1 kHz to 100 kHz
X100K	10 kHz to 1 MHz
X1M	100 kHz to 10 MHz

Multiply dial by 0.1 for non-symmetrical waveforms.

Main Output

Sine, square, triangle, positive pulse, and negative pulse selectable. Maximum output 30 V p-p (0 to 15 V P) into open circuit with calibrated 15 V p-p (0 to 7.5 V P) into 50 ohm load. Precision output attenuator calibrated in 10 dB steps to −60 dB, with a 20 dB vernier giving over-all attenuation of 80 dB. Output impedance is 50 ohms. Short circuit current is ±150 ma.

Sync Output

Amplitude greater than 4 V p-p open circuit; 2 V p-p into 50 ohms. Rise and fall times less than 20 nsec. Waveform square for symmetrical functions, rectangular for pulse and ramp. Positive and negative going pulses coincident with the transitions of the square wave output.

DC Offset

±10 Vdc open circuit (±5 Vdc into 50-ohm load). Peak output is limited to ±15 V open circuit (±7.5 V into 50-ohm load). DC offset and waveform are attenuated proportionately by the 60 dB attenuator.

STABILITY

Short term	±0.05% for 10 min.
Long term	±0.25% for 24 hrs.

Percentages apply to amplitude, frequency, and dc offset.

HORIZONTAL PRECISION

Frequency accuracy for time symmetrical waveforms 0.005 Hz to 1 MHz ±(1% of setting +1% of full scale); 1 MHz to 10 MHz ±(2% of setting +2% of full scale).

Vernier

Electronic frequency vernier is provided for precision frequency adjustment (approximately 1% of range).

VOLTAGE-CONTROLLED GENERATOR — VCG

VCG Control Range

Up to 1000:1 frequency change with external voltage input. Upper frequency is limited to maximum of selected range. Required external signal for full voltage control is 5 V with input impedance of 5 kΩ.

VCG Input Frequency

VCG Bandwidth— 100 kHz

VCG Slew Rate — 2% of range per μsec.

VERTICAL PRECISION

Sine Wave Frequency Response

Amplitude change with frequency less than:

0.1 dB to 100 kHz.
0.2 dB to 1 MHz.
2.0 dB to 10 MHz.

Step Attenuator Accuracy

±0.25 dB/10 dB.

Amplitude Symmetry

All waveforms are symmetrical about ground within ±1% of maximum p-p amplitude, with dc offset in off position.

PURITY

Sine Wave Distortion

Less than:

1.0 Hz to 100 kHz — 0.5%
0.005 Hz to 1 MHz — 1.0%.
1 MHz to 10 MHz — all hormonics at least 30 dB down.

Triangle Linearity

Greater than 99% 0.01 to 100 kHz.

Square Wave Rise and Fall Time

Less than 20 nsec; limited to 500 V/μs (terminated into 50-ohm load).

Total Aberrations

Less than 5%.

ENVIRONMENTAL

Temperature

All specifications listed, except for stability, are for 25°C ±5°C. For operation from 0°C to 55°C, derate all specifications by a factor of 2.

Model 144 HF Sweep Generator

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-220
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-200

The Model 144 HF Sweep Generator is actually two independent generators in one package. The first generator is a precision voltage-controlled generator operating over the 0.0005 Hz to 10 MHz range. The second generator is a triggered ramp or sawtooth generator which supplies the voltage to sweep the sine, square, and triangle outputs of the main generator. Both generators can be operated independently in the continuous or triggered modes, with independent frequency control.

Though the Model 144 is designated an HF Sweep Generator, it is also a portable oscillator, square wave generator, FM modulator, frequency shift keyer, and sweep and tone-burst generator — with variable duty cycles.

VERSATILITY

Waveforms

Sine ∿, square ⊓, triangle ∧, positive pulse ⎍, negative pulse ⎎. Continuously variable time symmetry (duty cycle) of all waveforms from 19:1 to 1:1 to 1:19, resulting with pulses in variable duty cycle and ramp or saw tooth waveforms with variable rise and fall times. Also separate sync output.

Operating Frequency Range

0.0005 Hz to 10 MHz.

NOTE: Multiply indicated frequency by 0.1 for non-symmetrical waveforms.

Main Output

Sine, square, triangle, positive pulse, and negative pulse selectable. Maximum output 30 V p-p (0 to 15 V p) into open circuit with calibrated 15 V p-p (0 to 7.5 V p) into 50 ohm load. Precision output attenuator is calibrated in 10 dB steps to −60 dB, with a 20 dB vernier giving overall attenuation of 80 dB. Output impedance is 50 ohms. Short circuit current is ±150 milliamps.

Sync Output

Amplitude greater than 4 V p-p open circuit; 2 V p-p into 50 ohms. Rise and fall times less than 20 nanoseconds.

DC Offset

±10 Vdc open circuit (±5 Vdc into 50-ohm load). Peak output is limited to ±15 V open circuit (±7.5 V into 50-ohm load). DC offset and waveform are attenuated proportionately by the 60 dB attenuator.

STABILITY

Short term ±0.05% for 10 minutes.
Long term ±0.25% for 24 hours.
Percentages apply to amplitude, frequency, and dc offset.

OPERATIONAL MODES

Continuous*

Operating as a standard voltage-controlled generator (VCG), the output frequency, appearing at the 50Ω OUT connector, is determined by the front panel control settings in conjunction with the signal applied to the VCG IN connector. The output of the internal ramp generator appears at the SWP/GCV OUT connector in this operational mode.

Trigger**

Same as the CONTINUOUS mode except that only one complete cycle of the output appears at the 50Ω OUT connector for each trigger pulse applied to the TRIG IN connector.

Gated**

Same as the TRIGGER mode except that output oscillations continue for the duration of the gating signal applied to the TRIG IN connector.

Tone Burst — Tone burst operation can be accomplished in the GATED mode by connecting the ramp voltage at the SWP/GCV OUT connector to the TRIG IN connector. The tone burst rate, frequency, and duration can be independently controlled in this configuration.

Continuous Sweep*

In this mode, the main generator is frequency modulated (swept) by the internal ramp generator. The output frequency appearing at the 50Ω OUT connector is swept from a low frequency determined by the front panel frequency control settings to a high frequency determined by the SWEEP WIDTH control setting. The sweep rate is determined by the front panel SWEEP TIME and VARIABLE controls. A generator-controlled voltage (GCV) proportional to the instantaneous frequency appears at the SWP/GCV OUT connector.

Triggered Sweep

Same as the CONTINUOUS SWEEP mode except that the output appearing at the 50Ω OUT connector is swept only once for each trigger pulse applied to the TRIG IN connector.

Sweep and Hold

Same as the TRIGGERED SWEEP mode except that the main generator continues to oscillate at the high frequency determined by the SWEEP WIDTH control during the time between triggered sweeps.

Trigger Input

1 V peak into 10 kΩ impedance dc coupled to 200 kHz, proportionally greater at higher frequencies.

Sweep Time/Width

10 μsec to 100 sec.; Up to 1000:1.

HORIZONTAL PRECISION

Frequency accuracy, for time symm trical waveforms, 0.005 Hz to 1 MH ±(1% of setting +1% of full scale 1 MHz to 10 MHz ±(2% of setting +2 of full scale).

VOLTAGE-CONTROLLED GENERATOR — VCG

VCG Control Range

Up to 1000:1 frequency change wi external voltage input. Upper frequen is limited to maximum of selected rang Required external signal for full volta control is 5 V; input impedance 5 k

VCG Input Frequency

VCG Bandwidth — 100 kHz.
VCG Slew Rate — 2% of range per μs.

VERTICAL PRECISION

Sine Wave Frequency Response

Amplitude change with frequency le than: 0.1 dB to 100 wHz, 0.2 dB to MHz, 2.0 dB to 10 MHz

Model 144, $845.

Terms: ½% 10 days; net 30.

NOTE: Specifications apply from 1 to 10 the frequency dial only.
*Both generators free run.
**Sweep generator free runs, main genera is triggered or gated.

Models 150 & 155 Programmable VCGs

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

he Series 150 Programmable Voltage-Controlled Generators are precision sources of sine, square and triangle waveforms that are designed for automatic system application. The Model 155 has local and remote digital control (Model 150 remote only) of frequency, function and amplitude. Additionally, both generators may be controlled by analog voltage in the following manner: the frequency may be programmed or modulated by an ac or dc signal. Generator output may be initiated by means of a trigger which will initiate one complete cycle, and/or gate input which will provide a signal for of an integral number of cycles for the duration of the applied gate. In the Model 155, programming is accomplished using front-panel switches. The frequency range consists of 8 decade ranges with 3 decimal digits of resolution covering the dynamic range 0.01 Hz to 1 MHz. The signal amplitude consists of 3 decade ranges with decimal digits of resolution covering the dynamic range of 0.01 volt to 10 volt peak-to-peak. Output range scaling is accomplished using an attenuator with 50-Ω output impedance on all ranges. All specifications require that the output be terminated by a 50-Ω load. The functions and modes are selected by a multiple deck switch. All these controls may be activated remotely by contact closures through a 50-pin connector on the rear panel of all models. The 3-pin digit control of frequency and amplitude is 8421 BCD coded with only 12 lines required for each. The ranges and functions are controlled by 1 line per function. Standard interface options are available so that any logic input may be converted in the instrument to provide proper information control. The Series 150 Programmable VCGs may be driven by computers, punched cards, or tape and servo switch devices. They are useful in automatic test systems, automatic control tools, production test stands, and as precision laboratory test generators.

VERSATILITY

Waveforms

Sine ∿, square ⊓, and triangle ∧.

Dynamic Frequency

0.01 Hz to 1 MHz in 8 ranges.

Four Simultaneous Outputs

1. ∿, ⊓, ∧, selectable and digitally variable from 0.01 V to 10 V p-p into a 50-Ω load in 3 ranges with 3-digit resolution.
2. ∿ 1 V p-p into 50-Ω load.
3. ∧ 1 V p-p into 50-Ω load.
4. ⊓ 0.5 V p-p into 50-Ω load.

Note: All outputs may be shorted without damage to instrument. This specification includes frequency stability.

VCG Analog Voltage Control

Over 20:1 frequency ratio. Analog frequency control and/or modulation. Input impedance is 10 kΩ.

Trigger

Manual or external voltage input control generator in trigger mode. A pulse will generate 1 cycle and a gate will allow a burst of cycles, the number determined by the length of the gate.

Input impedance 10 kΩ.

Input trigger voltage ±5 V to ±100 V.

HORIZONTAL PRECISION

Program Frequency Accuracy

±1% +1 digit with following exceptions: X.01 range is ±2% +1 digit; X100K range is ±5% +1 digit.

Typical VCG Linearity

±0.2% of frequency vs. input voltage, (frequency error 0.2% of total deviation best straight-line method).

0 V to 5 V gives 10:1 frequency deviation. Absolute frequency accuracy same as programmed frequency.

VCG Bandwidth

100 kHz.

VERTICAL PRECISION

Amplitude change with frequency less than 0.1 db to 100 kHz and 0.5 db to 1 MHz.

Peak-to-Peak Voltage Accuracy

Output 1 ±1% +1 digit of the programmed voltage 0.01 Hz to 100 Hz and ±5% +1 digit of the programmed voltage 100 kHz to 1 MHz when properly loaded with 50-Ω. Outputs 2 through 4 ±1% of stated output when properly loaded with 50-Ω. This specification includes amplitude stability.

Symmetry

All waveforms are symmetrical about ground within ±1% of max. p-p amplitude.

DC Offset Stability

Short term: 0.05%; long term: 0.25%.

PURITY

Sine Wave Distortion

Less than:

1% 0.01 Hz to 99.9 kHz.

3% 100 kHz to 1 MHz.

Triangle Linearity

Greater than:

99% 0.01 Hz to 99 kHz.

95% 100 kHz to 1MHz.

Square Wave Rise and Fall Time

Less than 150 nsec. output 1.

Less than 10 nsec. output 4.

PROGRAMMING

Basic units are programmable by remote contact closure. Frequency, function and amplitude may all be programmed. Frequency and amplitude have 3 digits resolution programmed by 8421 BCD code. Range and function selection direct-line contact. The Model 150 is remote programming only. The Model 155 is local and remote control. Local switches override remote programming.

INTERFACE OPTIONS

Option 2—Logic Level.

8421 code "1" = ±5 V to ±20 V dc, 15 mA/line max "0" = 0 V to ±0.5 V, $600.

Option 3—Logic Level.

8421 code "1" = 0 V to ±0.5 V.

"0" = ±5 to ±20 V dc, 15 mA/line max, $600.

Option 3S

Same as above with "0" = +3.5 V dc, 15 mA/line max., $700

Note: Consult factory for other options available.

ENVIRONMENTAL

Specifications apply at 25°C ±5°C. For operation 0°C to 50°C, derate by factor of 2.

MECHANICAL

Dimensions

19 in. w, 5¼ in. h, 16¼ in. d.

Weight

10 lb, 15 lb shipping.

Power

105 V to 125 V or 200 V to 250 V; 50 Hz to 400 Hz. Less than 15 W.

Model 157 Programmable Waveform Synthesizer

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-

The Model 157 Programmable Waveform Synthesizer is a precision source of sine, square and triangle waveforms generated over a frequency range of 100 μHz to 1 MHz. This unique multi-function generator features:

1. 0.01% frequency accuracy.
2. 100 μHz (2.77 hr/cycle) to 1 MHz (1 μsec) frequency range.
3. Sine, square, triangle waveforms.
4. 1,000:1 VCG.
5. Triggered/gated operation.
6. Selectable amplitude to 10 volts peak-to-peak.
7. All parameters programmable.

The frequency, function and amplitude of the generator can be controlled locally with front-panel switching or remotely by BCD/binary programming. Frequency accuracy is 0.01% of programmed frequency with 5-digit resolution on each of 10 ranges. The output voltage level can be programmed from 1 millivolt to 10 volts, peak-to-peak, in four ranges with 0.2% accuracy and 3-digit resolution.

The frequency of the Model 157 can be modulated about an accurately set center frequency by application of an ac voltage input. With a sawtooth input, the frequency can be swept over a 1,000:1 ratio.

A trigger capability is included to allow a single cycle of any waveform, or a burst of cycles, when gated from an external source. In addition, a frequency-search control is provided on the front panel that provides continuous sweep over the selected range with one turn of the control.

The combination of extremely broad signal range, frequency accuracy, and programmability make this instrument ideally suited for the demanding requirements of automatic system testing. It may be programmed by computers, paper tape, magnetic tape, IBM cards, servo switches, or remote-control stations. The instrument will respond to a program change in 1 milliseconds. Typical applications for the Model 157 are:

Automatically swept tone-burst signal source for programmed sonar transducer checkout.

Precise source of discrete frequency changes for audiometric research.

Muscle and tissue stimulus for biomedical research.

Low-frequency triangle waveform for metal testing to determine elongation and modulus of elasticity of samples.

Precision source for the determination of soil compressibility in geophysical studies.

Extremely low-frequency signals for earthquake-simulation studies.

The automatic-programming concept of the Model 157 propels the voltage-controlled oscillator (VCO) into the Computer Age at a time when more and more manufacturers are converting to automatic data processing (ADP) to produce, test and calibrate electronic products. In the easily foreseeable future, the demand for programmable instruments will exceed that now known for conventional manually controlled instruments.

The binary-coded-decimal (BCD) format that commands the Model 157 is used universally and is one of the simplest codes to program. Because all controllers do not use the same logic levels, Wavetek has designed the Model 157 to be optionally available in all of the following commonly-used logic configurations:

Option A: Inverse logic with positive voltage (logical one = 0 volts, logical zero = +2 volts to +10 volts).

Option B: Inverse logic with negative voltage (logical one = 0 volts, logical zero = −2 volts to −10 volts).

Option C: True logic with negative voltage (logical one = −2 volts to −10 volts, logical zero = 0 volts).

Option D: True logic with positive voltage (logical one = +2 volts to +10 volts, logical zero = 0 volts).

When no logic configuration is specified on the sales order, the Option A configuration will be shipped as the standard instrument. When Option B, C D is ordered, the specified logic c figuration will be supplied at no a tional cost.

Besides digital programming of quency, amplitude and function, VCO sweep and the gated tone-b can be automatically programmed f digital or analog sources.

VERSATILITY

Waveforms

Sine ∿, square ⊓, and triangle

Dynamic Frequency

100 μHz to 1 MHz in 10 ranges (hrs to 1 μsec).

Outputs

∿ , ⊓ , ∧ , selectable and digi variable from 0.001 V to 10 V p-p in 50-Ω load in 4 ranges with 3- resolution (0.002 to 20 V p-p open cuit).

Note: Output may be shorted without dama instrument.

VCG—Voltage-Controlled Generator

Over 1000:1 frequency ratio with signal. Input impedance is 10 kΩ

OPERATIONAL MODES

Trigger Mode

Generator may be triggered to pro single cycles on command or gate produce any discrete number of c by applying a + gate signal to tri input for the length of the de burst.

Input Impedance is 10 kΩ.

Plus gate required is +5 V to +5

Auto Cal Mode

Generator has an automatic co loop to maintain the output frequ for high accuracy and stability.

Manual Cal Mode

Generator is manually calibrated u the control loop but is then autor cally returned to the open-loop dition so that it may be swept or gered.

Search Mode

Generator frequency control within selected range is transferred from digital controls to a single turn ar control for convenient manual swee of the entire range.

Sync In

Within the upper 4 ranges, the in ment may be frequency synchron to an external signal of approxim 1 V p-p that is within 1% of the running frequency. The induced distortion will be less than 1%.

Sync Out

A fixed amplitude square wav brought out at 1 k impedance for ing scopes or other equipment.

Model 157 Programmable Waveform Synthesizer

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

HORIZONTAL PRECISION

Auto Cal Mode

Frequency accuracy from programmed input or front-panel selector switches is ±0.01% of programmed frequency, ±1 digit.

Closed-loop stability is within ±0.005% of programmed frequency at constant temperature for a 24-hour period.

Settling time of control loop—Loop will settle to within the accuracy specification of its final value in less than 3 sec max (1 msec for small-step changes).

Manual Cal Mode

Instrument can be calibrated to within an accuracy of 0.02% of programmed frequency and triggered or frequency modulated about this accurate center frequency. Open-loop stability is within 0.05% of setting for eight-hour period at constant temperature.

VCO Bandwidth

1 MHz.

Slew rate—100% of range per μsec.

VCO Linearity

Frequency vs input voltage—best straight-line method.

±1% 100 MHz - 10 kHz.

±% 10 kHz - 100 kHz.

±% 100 kHz - 1 MHz.

VERTICAL PRECISION

Amplitude change with frequency is less than 0.1 db to 100 kHz and 0.5 db to MHz.

Peak-to-Peak Voltage Accuracy

% of Program

1 to 10 V range ±(0.1% +5 mV).

0.1 V to 1 V range ±(1% +1 mV).

10 mV to 100 mV range ±(1% +0.1 mV).

1 V to 10 mV range ±(1% ±0.1 mV).

Amplitude Symmetry

All waveforms are symmetrical about ground ±1% of full range.

Trigger start-stop point will be 0 V ±5% of output amplitude program.

PURITY

Sine Wave Distortion

Less than:

0.5% 100 μHz to 10 kHz.

1% 10 kHz to 100 kHz.

3% 100 kHz to 1 MHz.

Triangle Linearity

Greater than:

.99, 1 Hz to 100 kHz.

.95, 100 kHz to 1 MHz.

Square Wave Rise and Fall Time

Less than 100 nsec.

ISOLATION

Output signal can be raised above ground up to 250 V. Caution must be taken as all exposed BNC connectors are at raised potential.

ENVIRONMENTAL

Temperature

Specifications apply at 25°C ±5°C.

Operating temperature range 0°C to 50°C.

REMOTE CONTROL SPECIFICATIONS

Configuration A (Standard)

True or Logic **"1" = 0 V ±1 V.**

Note: 0 V sinks approximately 1.5 mA.

False or Logic **"0" = +2 V to +10 V.**

Sweep Generators for TV Industry

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2

Model 310 IF-Video Sweep Generator

860 Series Combination VHF-UHF Sweep Generators

200 Series Video Sweep Generator

These instruments provide a wideband, flat, sweep signal of from 0.1 MHz to 10 MHz. The instrument will also sweep portions as narrow as 1 MHz throughout the entire frequency range. The instrument is designed specifically for testing video stages and chroma applifiers in monochrome or color TV receivers. They also find applications in closed-circuit TV and other video transmission systems. Up to 10 crystal-controlled pulse-type markers are available at discrete customer frequencies and the markers are extremely flexible, providing plus or minus 35-volt pulses for oscilloscope Z-axis modulations. Also, they may be used to shut off the sweep oscillator allowing a useable presentation on wideband oscilloscopes. The markers may also be connected to the oscilloscope horizontal or vertical axis for pulse indications.

Frequency Range
0.1 to 10 MHz.
Sweep Width
1 MHz to 10 MHz.
Output Amplitude
1 V rms (75 Ω).
Output Amplitude Variation
±0.5 db over max sweep width.
Sweep Rate
Line frequency.
Attenuation
99 db, in 3-db steps.

300 Series IF Sweep Generator

These instruments provide fixed-frequency, fundamental outputs for alignment and evaluation of intermediate frequency amplifiers. Models are available between 20 and 80 MHz, fitting the requirements of U. S. or foreign television receivers. They are also ideal for military or industrial applications in this frequency range. Bandpass measurements or other points of interest on a demodulated IF envelope are easily identified with the accurate, sharp, crystal-controlled pulse-type markers provided. These markers, like the 200 series, may be used internally or externally. Several optional features are available with the 300 Series, providing extremely accurate, expanded views of the rejection traps for either IF, video or automatic color phase control. For further details, contact factory representative.

Frequency Range
20-80 MHz (U.S. or foreign standards).
Sweep Width
5 MHz to 15 MHz.
Output Amplitude
1 V rms (75 Ω).
Output Amplitude Variation
±0.25 db.
Sweep Rate
Line frequency.
Attenuation
99 db, in 3-db steps.

400 Series VHF Sweep Generator

This series provides any 13 television channels to either U. S. or foreign standards. All switching is from dc contacts, eliminating the maintenance problems in obsolete instruments which are switching oscillator-lumped constants. Markers are provided at the video and sound carriers of the standard selected and optional features allow the addition of extra markers, local oscillator tracking features or a total of 7 markers on an independent IF function position. Units are available for 5¼ inch x 19 inch rack mounting or in a portable 6 inch x 7 inch x 10 inch cabinet. Other optional features are available as standard items providing complete self-contained test stations for tuner manufacturers. Please contact the factory for specific details.

Frequency Range
Any 13 channels to U. S. or foreign standards.
Sweep Width
5 MHz to octave bands.
Output Amplitude
0.75 V rms (75 Ω).
Output Amplitude Variation
±0.25 db over any channel.
Attenuation
±0.5 db over max frequency range.
99 db, in 3-db steps.

500 Series UHF Sweep Generator

These instruments provide frequency coverage of from 435 to 930 MHz and are designed primarily for the evaluation and alignment of UHF TV tuners and receivers. Instruments are available with video and sound pulse-type markers on all 69 UHF channels with counterparts to European or o standards. Sweep width is continuo adjustable from 5 MHz to 60 MHz a once preset, maintains a constant ba width throughout the entire tuning ra

Frequency Range
435 to 930 MHz.
Sweep Width
5 MHz to 60 MHz.
Output Amplitude
0.5 V rms (50 Ω).
Output Amplitude Variation
±0.25 db over any 50 MHz portion
±0.5 db over max range.
Sweep Rate
Line frequency.
Attenuation
45 db, in 5-db steps.

Combination Sweep Generato

Since the 200, 300, 400 and 500 Se instruments just described are al modular plug-in, solid-state const tion, they easily lend themselves t combination of multiple functi Combination instruments available described as follows:

Model 310 IF-Video Sweep Generator

This instrument provides the funct of both 200 and 300 Series, u a common 5¼ inch x 19 inch x 10 i package. An additional savings of u $500 under the cost of sepa units, is attained by using com markers for both the video and IF f tions. The Model 310 is ideal for engineering laboratory, quality co or repair facilities in production receiver manufacturing facilities, o the large-volume TV repair shops.

860 Series Combination VHF-UHF Sweep Generators

These instruments are a combinatio the 400 and 500 Series VHF or U Sweep Generators. They provide same frequency coverage, optional tures and specifications and are signed for the engineering labora quality control test station and re facility. Due to space limitations, all tional features cannot be included the factory or area representa should be consulted regarding user's specific requirements.

Distribution Amplifiers

A single Series 300 Sweep Gener may be used with up to 20 Series Distribution Amplifiers. Amplifica isolation, automatic leveling and ad able amplitude of 0.1 to 1.5 V rms provided at each test station wit flatness of ±0.25 db. More stat may be accommodated by using amplifier to drive 20 additional stati

Programmable Sweep Generators

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

1000 Series Automatic Programmable Sweep Generators

A new series of sweep generators, unique in both operation and packaging have been introduced by Wavetek-Indiana. These units provide all-modular construction, including power supply and cabinet. By removing the power supply and cabinet, the basic sweep-generator functions may be mounted in the Wavetek SA series laboratory type, 5-inch electrostatic X-Y display oscilloscope. This provides a completely integrated package with a minimum of space, interconnecting cables, etc.

All of the 1000 Series Sweep Generators utilize pin diode attenuator and leveling systems. This provides a method of leveling the sweep oscillator, or buffer amplifier, output without controlling B+; this results in little or no clipping of the RF envelope. Instead, leveling is controlled by bias on pin diode attenuator. Since the pin diode exhibits a wide attenuation range over the frequency with which they are used (and because they are in a closed-loop control system), the various 1000 Series instruments provide a continuously variable or dc programming output leveling adjustment of from 0 to 20 or 30 db.

The 1000 Series instruments also are completely voltage-tuned and voltage-swept, again allowing dc control from internal potentiometers or external analog programming. A unique feature available with the 1401, 1501, 1601 and 1001 programmer, provides automatic operation of both tuning and attenuation and, depending upon the test device and programming interface, the sweep oscillator bandwidth. This allows the instrument to be connected to the test device, adjusting itself automatically at the frequency to which the device is tuned. Attenuation is automatically programmed to maintain a constant, preset voltage from the test device and/or programming bandwidth to start or stop at the 3-db points. Analog voltages of all three parameters are readily available. These analog voltages may be compared with the desired parameters, providing error signals to automatically retune or adjust the set unit.

Many more applications and unique concepts are covered by the 1001 Series and various application notes are available from Wavetek-Indiana or the area representative. These instruments also find applications in communication checkout systems for the RF devices in telemetering, missile- or gun-control systems. The various instruments available are described in the following paragraphs.

1312 Series Sweep Generator

This series provides extremely narrow or medium coverage of IF amplifiers and components in the frequency range from 5 to 250 MHz. Units are available for most specific bands of interest and the marker systems are designed for the specific band covered. The pulse-type marker output may be used to internally shut off the sweep signal or the extremely accurate ±35 V marker pulses may be added to the oscilloscope for Z-axis modulation. The marker width is always 1/100 of the display allowing easy-to-read indications on very sharp slopes. Instruments are available covering the 4 to 5, 10 to 12, 11 to 13, 20 to 22 or 70 MHz IF bands. Special instruments for other bands of interest are available with no increase in price. Please contact the factory or the area representative for specific details.

1401 VHF Sweep Generator

This instrument provides frequency coverage of from 5 to 300 MHz and is designed for use in VHF television applications where the complete automatic circuits are useful for the evaluation, alignment or repair of VHF TV tuners or receivers. Optional features are available providing an interface with detent or continuously tuned test systems, and also provide easy-to-read indications of oscillator conversion or gain. Without the automatic circuits, the 1401 is ideal for CATV or MATV applications and, again, special optional features are available.

1501 UHF Sweep Generator

This instrument is similar to the 1401, except that it covers the UHF broadcast band from 450 to 950 MHz. It may be used manually, automatically, with complete dc remote programming, or in the complete operation mode. Markers are available and frequency ranges preset for use to U. S. or all European television standards.

1601 Automatic FM Sweep Generator

This instrument is similar to the 1401 and 1501 counterparts except that it covers the commercial FM broadcast band (88 to 108 MHz). It also provides complete manual, programming or automatic operation. Optional features are available for complete evaluation and alignment of the tuner, IF amplifier and ratio detector of a receiver, with all signals injected at the antenna terminals.

SA Series 5 Inch X-Y Display Oscilloscope

The SA basic scope frame will accept any of the 1000 Series instruments mentioned previously, providing power requirements, as well as internal connections of the three oscilloscope axes of horizontal, vertical and "Z". The instrument is all-solid-state (except CRT) and has a high-quality, electrostatic focus, 5AQP1 cathode ray tube. Vertical sensitivity is from 10 mV to 100 V/cm and is flat for frequency inputs of from dc to 500 kHz. A switch is provided on the front panel allowing the vertical amplifier to be internally connected to the built-in sweep generator or externally used for other applications.

Model 1001 Sweep/Signal Generator

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2

The Model 1001 Sweep/Signal Generator is a wideband, general-purpose sweeper covering the frequency range of 0.5 MHz to 300 MHz. Sweep frequency, sweep width, and attenuation all may be voltage-controlled, allowing the instrument to be used in programmed systems or as an automatic tester in closed-loop applications. In addition, the oscillator is so stable that it may be used as a CW signal source. A calibrated attenuator is provided to facilitate this application offering a +13 dBm to −77 dBm output level, including a 20 dB electronic vernier.

A marker system allows up to 8 plug-in modules at specified crystal-controlled frequencies; harmonic (comb-type) markers also are available. All markers are individually adjustable and may be turned on and off by front-panel pushbuttons. Additionally, amplitude, tilt and width all are controllable for optimum visibility.

The Model 1001 is unique in that the cabinet and power supply may be removed and the instrument internally mounted in the Wavetek SA Series, five-inch, transistorized X-Y oscilloscope. Mounting in this manner results in a complete sweep test system in a 7¼ x 19-inch package. Internal connections are made for X, Y or Z axes of the scope for automatic control of test signal, sweep and marker presentation. Only two external connectors need be used — the RF output to the test device and the demodulated output of the test device back into the sweep generator.

The Model 1001 actually is many instruments in one. For example, it is a quality sweep generator with specifications, applications and price that are virtually unequalled in the industry. The instrument also is usable as a signal generator providing signal generator specifications such as calibrated output system, AM or FM modulations, excellent dial accuracy, frequency resolution of tuning, etc. Finally, it is a completely programmable signal source in either of the aforementioned modes of operation and also can function as an automatic Q meter, an automatic readout, or error signal device.

GENERATOR SPECIFICATIONS

Frequency Range
Continuously adjustable from 0.5 MHz to 300 MHz.

Frequency Dial Calibration
10 MHz intervals at better than 1% of full scale accuracy.

Vernier Dial
Expands main frequency dial over ±3 MHz range.

Frequency Programming
−15 V to +15 V input signal results in 0.5 MHz to 300 MHz tuning range at approximately 10 MHz/V.

Frequency Readout
+15 V to −15 V analog output voltage indicates center sweep frequency or fixed frequency, essentially linear.

External FM
±15 V results in full deviation of ±150 MHz, max. modulation rate 100 Hz. (With reduced drive, i.e., 100 kHz bandwidth modulation rate, up to 50 kHz may be used).

Sweep Width
Continuously adjustable from 0.2 MHz to 300 MHz with logarithmic taper providing resolution for narrowband sweep.

Output Amplitude
+13 dBm, 1 V rms (−77 dBm min.) 50Ω output.

Output Attenuation
90 dB; 70 dB in 10 dB steps, with 3% accuracy and continuously veriable 20 dB with 1 dB calibration and 0.5 dB accuracy.

Output Programming
0 V to −18 V signal controls full 20 dB range; 30% AM modulation to 1 kHz.

Output Readout
0 V to −18 V analog voltage indicates attenuation, essentially linear.

Output Flatness
±0.25 dB* over full 0.5 MHz to 300 MHz frequency range; ±0.05 dB with external monitoring for programmed control of 20 dB electronic attenuator.
*As read on Wavetek D151 detector.

Spurious Signals
Harmonically related, typically 30 dB below signal frequency; non-harmonically related, typically 50 dB below signal frequency.

Residual FM
Less than 5 kHz.

Drift
Short term is less than 50 kHz/5 min.

Display Linearity
Frequency change to oscilloscope horizontal is within 2%.

Sweep Modes
Repetitive sweep; internally trigge single sweep, externally triggered si sweep, manual sweep, line-freque lock.

Sweep Rate
Continuously adjustable from 50 swe /sec. to 1 sweep/100 sec. in four o lapping ranges.

Blanking
Blanking of RF output in sweep m and removed in CW mode.

Horizontal Output
16 V p-p signal synchronized with sw oscillator.

MARKER SPECIFICATIONS

Type
Birdy-bypass markers with provisions up to eight plug-in modules. Mar may be 1-300 MHz discrete freque (Option A-1) or 1-10 MHz and 2 MHz harmonic frequency (A-2).

Marker Accuracy
0.005%.

Marker Amplitude

Model 1001 — $995

Marker Options
A-1: Single frequencies, crystal-c trolled markers from 1 to 300 k (specify frequencies).
A-2: Harmonic type (comb) crystal-c trolled birdy markers, available at quencies of 1 to 10 or 25 to 50 MHz.
A-4: A 1 kHz square-wave generator is available as a plug-?in module 100% amplitude modulation of the output in low-level applications.

Model 1004 Sweep/Signal Generator

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Model 1004 Sweep/Signal Generator is a wideband, general-purpose sweeper covering the frequency range of 500 MHz to 1000 MHz. Sweep frequency, sweep width, and attenuation all may be voltage-controlled, allowing the instrument to be used in programmed systems or as an automatic tester in closed-loop applications. In addition, the oscillator is so stable that it may be used as a CW signal source. A calibrated attenuator is provided to facilitate this application offering a +10 dBm to −80 dBm output level, including 20 dB electronic vernier.

A marker system allows up to eight plug-in modules at specified crystal-controlled frequencies; harmonic (comb-type) markers also are available. All markers are individually adjustable and may be turned on and off by front-panel push buttons. Additionally, amplitude, tilt and width all are controllable for optimum visibility.

The Model 1004 is unique in that the cabinet and power supply may be removed and the instrument internally mounted in the Wavetek SA Series, five-inch, transistorized X-Y oscilloscope. Mounting in this manner results in a complete sweep test system in a 7¼ x 13 inch package. Internal connections are made for X, Y, or Z axes of the scope for automatic control of test signal, sweep, and marker presentation. Only two external connectors need be used—the RF output to the test device and the demodulated output of the test device back into the sweep generator.

The Model 1004 actually is many instruments in one. For example, it is a quality sweep generator with specifications, applications, and price that are virtually unequalled in the industry. The instrument also is usable as a signal generator providing signal generator specifications such as calibrated output system, AM or FM modulations, excellent dial accuracy, frequency resolution tuning, etc. Finally, it is a complete programmable signal source in either of the aforementioned modes of operation and also can function as an automatic Q meter, an automatic readout, or error signal device.

GENERATOR SPECIFICATIONS

Frequency Range
Continuously adjustable from 500 MHz to 1000 MHz.

Frequency Dial Calibration
20 MHz intervals at better than 1% of full scale accuracy.

Vernier Dial
Expands main frequency dial over ±5 MHz range.

Frequency Programming
−15 V to +15 V input signal results in 500 to 1000 MHz tuning range.

Frequency Readout
+15 V to −15 V analog output voltage indicates center sweep frequency or fixed frequency, essentially linear.

External FM
±15 V results in full deviation of ±250 MHz, maximum modulation rate 100 Hz. (With reduced drive (i.e., 100 kHz bandwidth modulation rate) up to 50 kHz may be used).

Sweep Width
Continuously adjustable from 0.5 MHz to 500 MHz with logarithmic taper providing resolution for narrowband sweep.

Output Amplitude
+10 dBm, .7 V rms (−80 dBm minimum), 50Ω output.

Output Attenuation
90 dB; 70 dB in 10 dB steps, with 3% accuracy and continuously variable 20 dB with 1 dB calibration and 0.5 dB accuracy.

Output Programming
0 V to −18 V signal controls full 20 dB range; 30% AM modulation to 1 kHz.

Output Readout
0 V to −18 V analog voltage indicates attenuation, essentially linear.

Output Flatness
±0.5 dB* over full 500 MHz to 1000 MHz frequency range; ±0.05 dB with external monitoring for programmed control of 20 dB electronic attenuator.
*As read on Wavetek D151 detector.

Spurious Signals
Harmonically related, typically 30 dB below signal frequency; nonharmonically related, typically 50 dB below signal frequency.

Residual FM
Less than 20 kHz.

Drift
Short term is less than 100 kHz/5 min.

Display Linearity
Frequency change to oscilloscope horizontal is within 3%.

Sweep Modes
Repetitive sweep; internally triggered single sweep, externally triggered single sweep, manual sweep, line-frequency lock.

Sweep Rate
Continuously adjustable from 50 sweep/sec. to 1 sweep/100 sec. in four overlapping ranges.

Blanking
Blanking of RF output in sweep mode and removed in CW mode.

Horizontal Output
16 V p-p signal synchronized with sweep oscillator.

MARKER SPECIFICATIONS

Type
Birdy-bypass markers with provisions for up to eight plug-in modules. Markers may be 500 to 1000 MHz discrete frequency (Option A-1) or 1-10 MHz and 25-50 MHz harmonic frequency (A-2).

Marker Accuracy
0.005%.

Marker Amplitude
Adjustable from 1 mV to 12 V p-p individually or collectively.

Marker Width
Adjustable in four incremental steps from approximately 15 kHz to 400 kHz.

Marker Tilt
From vertical to approximately 90°.

Tilt Amplitude
Approximately 10% of display width.

External Marker Input
BNC connects external CW signal for conversion into birdy marker; input level at least 0.1 V rms into 50Ω.

Recorder Processing
Internal switching removes negative portion of birdy markers for use with X-Y recorders.

MECHANICAL

Dimensions
8¼ in. w., 5¼ in. h., 13 in. d.

Weight
15 lb. net, 18 lb. shipping.

Power Requirements
115/230 V, 50/60 Hz, approximately 20 watts.

Model 2001 Sweep/Signal Generator

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-22
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-20

The Model 2001 Sweep/Signal Generator offers an exceptionally wide frequency range (.5 to 1500 MHz) and programming versatility in a ruggedized, bench-top instrument. Despite its laboratory-type specifications, the Model 2001 is very much at home in a production setup, being used as an automatic tester in a closed-loop system. For a complete sweep/test system in a 7¼ inch by 19 inch rack-mounting package, the cabinet and power supply may be removed, and the 2001 may be installed in the Wavetek SA Series, five-inch, transistorized X-Y oscilloscope.

Each of its three frequency ranges can be swept in its entirety, up or down in frequency, at any rate between 50 sweeps a second and 1 sweep every 100 seconds. Manual, triggered, or recurring sweeps are provided; sweep frequency, sweep width, and output attenuation each may be controlled by external voltages.

Up to eight crystal-controlled marker modules (single frequency or harmonic birdy markers) may be plugged into the 2001; each has its own on/off switch, width control, and amplitude control. A unique circuit design permits the markers to be tilted 90° for easy viewing when they are displayed with steep transition signals. When X-Y plotter operation is desired, the user need only flip a front panel switch to provide rectified markers.

One marker position can be occupied by a 1 kHz square wave modulator module, providing 100% amplitudemodulation of the RF output for low-level recovery use. In this configuration, a push button on the front panel turns the 1 kHz modulator on and off.

Frequency Range
0.5 to 1400 MHz in 3 bands. 0.5 to 500 MHz, 500 to 1000 MHz and 900 to 1400 MHz — 50 MHz overlap between bands.

Frequency Functions
Start-stop — tuning dials with slide rule readout of start and stop frequencies. May sweep up or down in this mode.
△f — in this mode, start dial indicates center frequency, stop dial indicates sweep width.
CW — oscillator blanking is removed for a 100% duty cycle.

Frequency Dial Calibration
10 MHz intervals at accuracy better than 3% or 10 MHz whichever is smaller.

Frequency Programming
−15V to +15V input signal results in full range tuning of band selected at approximately 16 MHz/volt.

Frequency Readout
+15V to −15V analog output voltage indicates center sweep frequency or CW frequency of band selected, essentially linear.

External FM
±15V results in full deviation ±250 MHz, maximum modulation rate of 100 Hz (with reduced drive, i.e., 100 kHz bandwidth, modulation rates up to 50 kHz may be used.)

Sweep Width
200 kHz to full band in either start/stop or △f modes.

Output Amplitude
+10 dBm, 0.7 VRMS (−80 dBm maximum) 50Ω output impedance.

Output Attenuation
90dB; 70dB in 10dB steps and continuously variable 20dB with 1dB calibrations.

Output Programming
0V to −18V signal controls full 20dB range, 30% AM modulation to 1 kHz.

Output Readout
0 to −18 volt analog voltage indicates attenuation essentially linear.

Output Flatness

Band 1	0.5 to 500 MHz	±0.5dB.
Band 2	500 to 900 MHz	±0.25dB.
Band 3	900 to 1400 MHz	±0.25dB.

All bands with up to ±.05dB flatness using external samplers for programmed control of 20dB attenuator.

Spurious Signals
Harmonically related.

Band 1	0.5 to 500 MHz	−20dB.
Band 2 & 3	500 to 1500 MHz	−30dB.

Non-harmonically related band 1 −20dB bands 2 & 3 not applicable.

Residual FM
Less than 10 kHz.

Drift
Short term less than 100 kHz per 5 min. at 25°C.

Display Linearity
Frequency change to oscilloscope. Horizontal is within 2%.

Sweep Modes
Recurring sweep, Internally triggered.
Single sweep, Externally triggered.
Single sweep, Manual sweep, Line frequency lock.

Sweep Rate
Continuously adjustable from 50 sweeps/second to 1 sweep/100 seconds in 4 overlapping ranges.

Blanking
Blanking of RF output in sweep mode for zero reference line, removed in CW mode.

Horizontal Output
16V p-p signal synchronized sweep oscillator.

MARKER SPECIFICATIONS

Type
Up to eight plug-in birdy bypass ma ers may be at discrete frequencies (c tion A-1) of 0.1, 1.0, 5.0, 10.0, 25 50.0 or 100 MHz harmonic interva (option A-2). Note the 0.1 MHz harmon will not operate above 500 MHz.

Marker Accuracy
.005%.

Marker Amplitude
Adjustable from 100μV to over 1 V individually or collectively.

Marker Width
Adjustable in four incremental ste from approximately 15 kHz to 400 k

Marker Tilt
From vertical to approximately 90°.

Tilt Amplitude
Approximately 10% of display wid when at 90°.

External Marker Input
BNC connector connects external signal for conversion to birdy mark marker is processed with amplitu width and tilt as with A-1 and A-2 tions. Input level must be at le 100mv into 50Ω.

Recorder Processing
Front panel switch removes negat portion of birdy markers for use w X-Y recorders.

Frequency-Counter Output
A rear panel BNC connector provides sample of the RF output frequency frequency counter monitoring. Useal in CW or manual sweep mode only. O put level 50mv into 50Ω.

Mechanical

Dimensions
8¼ in. w., 5¼ in. h., 13 in. d

Model 220 Dialamatic Measurement System

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Wavetek Model 220 presents an entirely new concept in multiple-purpose meters. The versatility that is often found in low- to medium-accuracy multimeters is combined with the accuracy that is usually only found in special-purpose calibrators. The addition of the exclusive Wavetek Transfermatic Switch mechanism and the Model 220 nonsaturating null amplifier result in an instrument that has unequalled versatility, accuracy and ease of operation.

The Model 220 has the following features:

Measures dc voltages to 1,200 V.
Measures dc ratio.
Measures ac voltages to 1,200 V.
Measures frequency to 12 MHz.
Measures ohms to 12 ohms.
Measures ohms ratio.
Supplies calibrated dc voltage to 120 V.

The basic 0.005% accuracy of this instrument is such that it can be used as a general-purpose laboratory tool in research and development, and also as an indispensable aid in the maintenance and calibration of instruments that are less accurate.

The Model 220 is a precision potentiometric/null balance measuring device. The readout is a six-digit precision Kelvin Varley bridge interconnected by Wavetek's Transfermatic Switch. Output terminals are provided for permanent recording of off-null deflections.

Digital Readout
Six-digit potentiometric control with associated dial indicators: 4 switches, and 1 potentiometer in the least-significant decade having 2-digit resolution.

Analog Readout
Edge-reading, taut-band null indicator with selectable full-scale indication from ±0.01% of range to 100% of range.

Meter Sensitivity
±01 0.1, 1, 10 and 100% of range. The full-scale sensitivity of the null meter depends on the meter sensitivity and the range selected for the parameter being measured. When measuring dc volts, the dc range switch determines the meter sensitivity. For all other measurements, the plug-in range switch determines the sensitivity.

Full-Scale Meter Sensitivity in Volts and kHz.

Meter Sensitivity Setting In % of Range	Range Setting, Volts—kHz/kΩ 1	10	100	1,000
100	1	10	100	1,000
10	0.1	1	10	100
1	0.01	0.1	1	10
0.1	0.001	0.01	0.1	1
0.01	0.0001	0.001	0.01	0.1

Resolution (Null Meter)
1 ppm of range (½ minor division on mirror scale).

Resolution (Transfermatic Switch)
0.5 ppm of range (½ minor division on dial).

Voltage Reference Stability
±0.0005% per hr.
±0.0025% per yr.

Recorder Output
±300 mV output corresponding to full-scale meter deflection. Output impedance—10 kΩ.

Environmental
All specifications apply for 25°C ±5°C; for operation from 0°C to 50°C, derate by factor of 3.

Dimensions
17 in. w, 5¼ in. h, 16 in. d.

Weight
Approximately 15 lb net, 20 lb shipping.

Power Requirements
105 V to 125 V or 200 V to 250 V, 50 Hz to 400 Hz. Less than 50 watts.

DC/DC RATIO SPECIFICATIONS

Input
0 to 1,200 V dc in 4 ranges: 1 V, 10 V, 100 V, and 1,000 V, each range having 20% over-range capability.

Polarity
Front-panel pushbutton selected, plus or minus.

DC Accuracy
±0.005% of reading +0.001% of range (or 15 μV); 0 to 100 V ±0.01% of reading ±0.001% of range, 100 V to 1,200 V.

DC Input Impedance
Infinite at null on 1 V, 10 V, and 100 V ranges; greater than 10 megohms on 1,000 V range.

DC RATIO LINEARITY
0.001% of full scale (+10 V nominal input into 25 kΩ).

DC CALIBRATOR SPECIFICATIONS

Accuracy
0.005% of value ±0.001% of range from 0.00000 to 119.9999 V.

Output Current
1 mA.

Overload
A current trip relay is provided to open the calibrator if the output current is exceeded.

AC SPECIFICATIONS

Frequency Range
5 Hz to 100 kHz.

Input Voltage
1 mV to 1,000 Vac rms in 4 ranges.

Input Impedance
1 MΩ and 40 pF.

AC ACCURACY
±0.1% of reading ±0.005% of range, 50 Hz to 5 kHz, 1 mV to 120 V.
±0.5%, 5 Hz to 20 kHz, 1 mV to 120 V (10 Hz to 20 kHz on 1,000 V range).

HERTZMETER SPECIFICATIONS

Frequency Range
10 Hz to 12 MHz in 5 ranges.

Accuracy
±0.001% of reading +0.001% of range.

Typical Response to Step Input
±0.01% of range in 3 sec, ±0.001% of range in 8 sec.

Input Trigger Characteristics
250 mV (rms) sensitivity, ac-coupled input into zero crossing detector; max input 250 V rms.

Input Impedance
1 MΩ and 40 pF to 5 V input, 100 kΩ and 100 pF to 250 V.

Self-Calibration Feature
Frequency calibration and linearity can be checked for all ranges by means of 1 MHz and 500 kHz test signals on front panel.

OHMS/OHMS RATIO SPECIFICATIONS

Ohms Range
0 to 12 MΩ in 5 ranges.

Accuracy
±0.005% of reading +0.001% of range, 1 kΩ to 112 kΩ.
±0.01% of reading +0.002% of range, 1 kΩ and 1 MΩ ranges.

Test Current

Range	Test Current	Max Voltage Across Range
0 to 1,200-Ω	1 mA	1.2 V
1 kΩ to 12 kΩ	1 mA	12 V
10 kΩ to 120 kΩ	100 μV	12 V
100 kΩ to 1,200 kΩ	10 μV	12 V
1 MΩ to 12 MΩ	1 μV	12 V

Ohms Ratio Accuracy
±0.02%.

Model 740 and 750 Phase Meters

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-22
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-20

The Wavetek Model 740 and 750 Phase Meters accurately measure the phase angle between any two ac signals (with an amplitude ratio as great as 10,000 to 1) within the 10 Hz to 2 MHz range. Excellent sensitivity, broad dynamic range, wide bandwidth, and high precision are offered by these compact easy to use instruments. High impedance differential inputs are used; and a dc output (−10mV/DEG) is provided for use in recording phase angle measurements or as a control signal for phase lock loops or servo systems.

The digital Model 750 provides four digit resolution (0.1°) and the widest dynamic amplitude range available. The automatic operation of this instrument eliminates the need for amplitude matching, frequency tuning, and output filtering, resulting in true hands-off operation.

The Model 740 substitutes a taut band meter readout and 360-degree phase offset capability to allow measurements at the highest possible resolution and adjustment for input signal phase shifts. Both instruments incorporate a unique closed loop design which eliminates most errors due to signal distortion and ensures stable, long-term phase measurements over varying temperature conditions.

ACCURACY

Absolute Measurement Accuracy
±0.1° calibration accuracy, reference 20 Hz to 20 kHz square wave input with equal amplitude on both channels between 100 mV and 5 V p-p.

Frequency Effects on Accuracy
With a sine wave input of 100% of amplitude range, accuracy is equal to calibration accuracy ±.2° from 20 Hz to 20 kHz. Zero offset from 10 Hz to 100 kHz is less than 0.1° or 0.1° per 10 kHz. Relative phase accuracy 100 kHz to 2 MHz better than 2°.

Amplitude Effects on Accuracy
Less than 1° error per 20 dB input-level change, 10 Hz to 500 kHz with equal level signals.

NOTE: Minimum sensitivity below 20 Hz and above 50 kHz is 1% of amplitude range.

Waveforms Effects on Accuracy
Errors due to even harmonic sine distortion are essentially eliminated by unique input detection circuitry.

Resolution
0.1°.

Drift
Less than 0.3° per 100 hours after one-half hour warmup.

Response Time
For full scale phase angle change on input, less than 4 seconds for specified accuracy.

NOTE: Rated accuracy applies throughout phase range except for 2° from either range extreme.

INPUT SIGNAL

Model 740 Amplitude Range
50 mV to 50 V rms.

NOTE: Any 1000:1 amplitude range between 1 mV and 300 V available as an option.

Model 750 Amplitude Range
1 mV to 300 V rms, selectable in two overlapping ranges, 1 mV to 2 V and 300 mV to 300 V rms.

Frequency Range
10 Hz to 2 MHz.

Differential Measurement
True differential input. Input impedance is 2 MΩ shunted by 20 pF. When used single ended the input impedance is 1Ω M and 30 pF.

Maximum DC Voltage
Model 740 — 400 V. .
Model 750 — 200 V. (2 V range), 500 V (300 V range).

Common Mode Rejection
10 Hz to 100 kHz >50 dB.
100 kHz to 2 MHz >40 dB.

READOUT/CONTROLS

Model 740

Display
Meter readout with four selectable scales, ±6°, ±18°, ±60°, ±180°.

Recorder Output
0 to −3.600 Vdc (−10 mV/degree) directly proportional to phase reading, output impedance 1 kΩ.

Phase Offset Control
Phase offset control continuously variable from 0 to ±180° with coarse and fine adjustments.

Model 750

Display
Four digit Nixie readout +000.0° +360.0° or −180.0° to +180.0° sele able, with automatic lead-lag (+ or indication.

Recorder Output
0 to −3.600 Vdc (−10 mV/degree, 0 360 range) or −1.800 to +1.800 V (−180 to +180 range) directly prop tional to phase reading, output im dance 1 kΩ.

BCD Output (Optional)
8421 coded output available. Nomi logic levels, logic 1 = 1.6 V ±.4 V, lo 0 = 0.2 V ±.2 V from 10 k source i pedance.

GENERAL FEATURES

Phase Calibrate Switch
This rear panel switch allows the u to check range maximum and minim calibration points. Rear panel access provided for calibrate adjustments.

MECHANICAL

Weight
9 lb. net, 12 lb. shipping.

Dimensions
8½ in. w., 5¼ in. h., 11 in. d.

Power Requirements
100 V to 130 V or 200 V to 250 V, to 400 Hz, less than 25 watts.

Model 755 Programmable Phase Meter

WAVETEK
9045 Balboa Ave., San Diego, Calif. 92123; Tel. 279-2200
P.O. Box 651, San Diego, Calif. 92112; TWX 910-335-2007

The Wavetek Model 755 is a completely automatic programmable digital phase meter designed for automatic phase measurement in systems applications. The instrument features the excellent sensitivity and broad dynamic range characteristics of all Wavetek phase meters, and adds the automatic and programming features required for automatic systems applications.

The wide dynamic range of the Model 755 allows measurements to be made over a 1000:1 range of input signal. Phase range is selected automatically to permit measurement of any phase angle without manual adjustment. The instrument may be programmed to update a phase angle reading upon receipt of a read command from an external source. Upon receipt of this command, the instrument will measure the phase angle and generate a print output command when the measurement is complete.

All automatic controls may be operated manually from rear panel controls for added convenience during system checkout.

The automatic operation of the Model 755 Phase Meter makes it ideally suited for computer-controlled test systems. The optional closed-loop phase lock feature allows the instrument to be used with a Model 157 Programmable Waveform Synthesizer. This combination will phase-lock and generate precision programmable phase shift from an external reference frequency. Phase shift is controllable from 0° to 360°.

ACCURACY

Absolute Measurement Accuracy
±0.1° calibration accuracy, reference 40 Hz to 20 kHz square wave input between 100 mV and 5 V peak-to-peak.

Frequency Effects on Accuracy
With a sine wave input of 100% of amplitude range, accuracy is equal to calibration accuracy ±.2° from 40 Hz to 20 kHz. Zero offset from 40 Hz to 100 kHz is less than 0.1° or 0.1° per 10 kHz. Relative phase accuracy 100 kHz to 2 MHz better than 2°.

Amplitude Effects on Accuracy
Less than 1.5° for 60 dB change on both channels.

NOTE: Minimum sensitivity above 50 kHz is 500 mV.

Waveforms Effects on Accuracy
Errors due to even harmonic sine distortion are essentially eliminated by unique input detection circuitry.

Resolution
0.1°.

Drift
Less than 0.3° per 100 hours after one-half hour warmup.

INPUT SIGNAL

Amplitude Range
50 mV to 50 V rms.

Frequency Range
40 Hz to 2 MHz.

Differential Measurement
True differential input. Input impedance is 2 MΩ shunted by 20 pF. When used single-ended the input impedance is 1 MΩ and 30 pF.

Maximum DC Voltage
400 V.

Common Mode Rejection
10 Hz to 100 kHz >50 dB.
100 kHz to 2 MHz >40 dB.

READOUT/CONTROLS

Display
Four digit Nixie readout −180.0° to +360.0° with automatic lead-lag (+ or −) indication. Proper phase range is automatically selected. Rear panel switch allows manual selection of −180° +180° or 0° +360° range.

Recorder Output
−10 mV per degree dc voltage output directly proportional to phase reading, output impedance 1 kΩ.

GENERAL FEATURES

Phase Calibrate Switch
This rear panel switch allows the user to check range maximum and minimum calibration points. Rear panel access is provided for calibrate adjustments.

MECHANICAL

Weight
14 lb. net, 18 lb. shipping.

Dimensions
19-in. rackmount panel, 3½ in. h., 16½ in. d.

Power Requirements
100 V to 130 V or 200 V to 250 V, 50 to 400 Hz, less than 25 watts.

Environmental
Specifications apply 25°C ±5°C, after one-half hour warmup.

BCD Output
8421 TTL Logic
Logic 1 = +2.4 V minimum
Logic 0 = +0.4 V maximum

Computer Read Command Input
Accepts positive pulse 2-10 V, 100 ns minimum width. Manual read command available with rear panel switch.

Print Command Output
Pulse 0 (±.3V) to 2.0 (±.4) volts when reading is available. Minimum width 50 μseconds.

Read Time
500 ms maximum

BRUSH RECORDERS: A MATTER OF RECORD

Here . . . from a single source . . . is a complete selection of versatile, high-performance direct writing recorders. There's a choice of 2, 4, 6 and 8 analog channels (plus event markers).

Their unique precision servo penmotors provide 99½% linearity and a true rectilinear trace. The famous Brush patented pressurized-ink writing system is standard on all but the Datapoint recorder. Pressurized ink-writing puts ink *into* the paper not onto it. There's no smudge, no smear, no puddling. All electronics are solid-state. They are compatible with the wide variety of Brush signal conditioners. Most models are available in both portable and rack mounted versions. Look to Brush for the optimum answer in direct writing recorders. Their performance is a matter of record.

Mark 280 2-Channel High Performance Recorder—Facts come in twice as loud and clear on this high performance recorder. Double width 80mm channels assure highest resolution, quick and easy read-out. Built-in preamps provide a measurement range from 0.5mV/Div. to 500V full scale. The finest 2-channel portable you can buy.

Brush 440 4-Channel General Purpose Recorder—Designed for maximum versatility at low cost per channel. It's rugged and performs with exceptional reliability in laboratory or field applications. Four 40mm channels and 2 event markers.

Mark 480 8-Channel General Purpose Recorder—One of our newest. This system is ideally suited for a wide range of applications. It is the lowest-cost-per-channel recorder of its kind available today.

Datapoint 8 Channel Multipoint Recorder—Ideal for monitoring such variables as temperature, flow, pressure, etc. It utilizes felt tip capillary writing. Sampling rates can be selected anywhere between 2 seconds per point to 20 points per second. One or two channels can be intensified. Or it can write continuously as a single channel recorder.

Mark 240 4-Channel High Performance Recorder—This 4-channel recorder is designed for applications where maximum resolution and precision are required. Modular design permits use of interchangeable preamps. Rack, cabinet or cart mounted, it also offers a push-button choice of 12 chart speeds.

Mark 2300 Lightbeam Oscillograph—This dual tungsten filament optical oscillograph provides fail-safe reliability, economy of operation, operator safety and unlimited application possibilities. It has 1 to 16 channels, d-c to 5 kHz with matched companion amplifiers and plug-in galvos.

Mark 220 2-Channel General Purpose Recorder—A versatile, rugged, accurate recorder that's easy to operate, easy to buy. Small as a breadbox, weighs just 25 lbs. Built-in preamps provide a measurement range from 1 mV per division to 500V full scale.

Mark 260 6-Channel General Purpose Recorder—This rugged 6-channel recorder will handle the great majority of recording tasks with high precision and maximum operator convenience. Built-in preamps provide a measurement range from 1 mV per division to 500V full scale.

Mark 200 8-Channel High Performance Recorder—The world's standard for high performance direct writing recorders. The Mark 200 can be tailored to your specific requirements through a broad range of modular sub-systems. There's a choice of horizontal or vertical oscillographs and a wide range of penmotor and channel-width combinations.

Data Frame Identification — Time — Hour

Outstanding data print out, a real time clock, nixie tube display and variable frame scan rate are a few exceptional features of the compact 5 to 20 channel Esterline Angus Model D-2020 Digital Data Acquisition System.

The D-2020 has a self-contained digital printer. It prints ch nel number, data, time and data frame identification entered by a manual control. Its decimal point is floati thus, it can be assigned to any of the four digits. Frame s rates can vary from two channels per second to one fra per hour to permit a wide range of data sampling.

The system has low level signal conditioning of one milliv full scale with 200 percent over-range. Programmable g of individual channels—1, 10 and 100 millivolts—can selected by front panel switches. Each channel can be signed a different gain which allows various levels of scale input from different types of transducers.

Noise rejection is accomplished by using an integrating ty digital voltmeter and guard-shield techniques. Errors due common mode pickup are made negligible by guarding. T guard circuit completely isolates the measuring circuit fr the chassis, breaking the common mode loop. The gua connection is carried through the input scanner to the sig source.

This compact digital data system has an optional internal cuit which allows interface with incremental magnetic ta or punched paper tape recorders. Data is available in AS coded format which means data can be analyzed readily computer reduction.

Specifications

Number of Channels	Maximum of 20, minimum of 5
Operational Modes	A. Automatic scan of any length frame determined by front panel push button. (Frame scan rate variable from continuous to one scan per hour.) B. Single scan of any frame length, manually triggered. C. Single or continuous scan of any one channel. D. External trigger for single channel or single frame scan.
Data Frame Scan Rate	Variable from continuous to one frame per hour. External frame trigger available as standard.
Data Frame Length	Variable by push button "end-of-frame" selector switches on front panel.
Channel Scan Rate	Two channels per second.
Data Frame Identification Number	Three digits controlled by front panel manual entry switches.
Clock	Internal, digital, real time, solid-state clock. Twenty-four hour time code for hours and minutes.
Input Configuration	Floating, differential 3-wire input (high, low and guard). Complete channel isolation (all three leads switched).
Input Ranges	Choice of three: 1, 10 and 100 MV individually selectable by front-panel switches. Readable over-range on all ranges is 200%
Resolution	1 μv (on 1MV range).
Input Impedance	100 megohms all ranges.
Source Impedance	Maximum 10 K ohms.
Noise, Referred to Input	5 μv peak-to-peak.
Common Mode Voltage	200 VDC
Common Mode Rejection	120 db (1,000,000:1) at DC 100 db (100,000:1) at 60Hz AC Maximum AC voltage — 120 V rms
System Accuracy	$\pm$ 0.1% of full scale or 5 μv, whichever is greater, $\pm$ one digit.
Size and Weight	17⅛" wide, 7" high, 16½" deep. 25 pounds
Power Requirements	120 or 240 V $\pm$10%, 50 and 60Hz
Output Options	A. Internal interface and formatter to drive paper tape perforator. Data coded per ASCII (1968). B. Internal interface for seven track 556-BPI incremental magnetic tape recorder.
Price	$3,540.00 for basic 5-channel system. This basic system is wired to accept 20 channels of data. Additional 15 channels by plug-in cards available at $250.00 per 5-channel card.

Servo Recorders

Single 150 mm Channel

Chart—170 mm wide, 65′ long, 150 mm (approximately 6″) calibrated width, straight coordinates.

Writing—Ink.

Servo Motor—AC rotary, only two pulleys.

Battery or AC operation—12 continuous hours per charge with rechargeable batteries, 24 continuous hours with alkaline batteries, indefinitely on AC.

Amplifier—Solid state.

Minimum Source Impedance—Up to 10,000 ohms.

Step Response—½, 1 second full 150 mm span.

Spans—2, 5, 10, 20, 100 and 200 MV. 0.5, 1, 2, 5, 10, 20 or 50 V. Switch selectable.

Accuracy—±0.5% of span.

Chart Speeds—Switch selectable. 20, 60 and 180 mm per minute and hour with two times multiplier.

Case—T171B portable.

Options—Carrying case.

Prices—From $800.

Single 10″ Channel

Chart—11″ wide, 120′ long, 10″ calibrated width, straight coordinates.

Writing—Ink.

Servo Motor—AC rotary. Infinite resolution sealed conductive plastic feedback element.

Amplifier—Solid state plug-in.

Maximum Source Impedance—Up to 10,000 ohms. Off balance input impedance 50,000 ohms minimum.

Step Response—½, 1, 4 or 20 seconds full 10″ span.

Inputs—DC MV as low as 1 MV, DC volts, thermocouples, DC bridge for resistance thermometers.

Accuracy—±0.25% of span or ±3.5 microvolts, whichever is greater.

Chart Drives—Series "E"—15, 10 or 5 speed automatic; 10 or 5 speed manual.

Chart Speeds—½″ per hour to 8″ per second or 12½ mm per hour to 200 mm per second.

Case—Series "E"—Flush, wall or bench mounting.

Options—Retransmitting potentiometer, up to 6 alarms, variable span and zero.

Prices—From $1,050.

Two 10″ Overlapping Channels

Chart—11″ wide, 120′ long, 10″ calibrated width, straight coordinates.

Writing—Ink.

Servo Motors—AC rotary, one pen located 1/10″ behind the other. Two records overlap full 10″ calibrated width. Infinite resolution sealed conductive plastic feedback element.

Amplifiers—Solid state plug-in.

Maximum Source Impedance—Up to 10,000 ohms. Off balance input impedance 50,000 ohms minimum.

Step Response—½, 1, 4 or 20 seconds full 10″ span.

Inputs—DC MV as low as 1 MV, DC volts, thermocouples, DC bridge.

Accuracy—±0.25% of span or ±3.5 microvolts, whichever is greater.

Chart Drives—Series "E"—15, 10 or 5 speed automatic; 10 or 5 speed manual.

Chart Speeds—½″ per hour to 8″ per second or 12½ mm per hour to 200 mm per second.

Case—Series "E"—Flush, wall or bench mounting.

Options—Retransmitting potentiometer, variable span and zero.

Prices—From $1,750.

Multipoint

Chart—11″ wide, 120′ long, 10″ calibrated width, straight coordinates.

Printing—Single or multicolor dots with point numbers.

Input Points—2, 3, 4, 6, 8, 10, 12, 16, 18, 20 or 24 with print rate from 1½ second to 10 minutes per point.

Amplifier—Solid state plug-in. Infinite resolution sealed conductive plastic feedback element.

Maximum Source Impedance—Up to 10,000 ohms. Off balance input impedance 50,000 ohms minimum.

Inputs—DC MV as low as 1 MV, DC volts, thermocouples, DC bridge.

Accuracy—±0.25% of span or ±3.5 microvolts, whichever is greater.

Chart Drives—Series "E"—10 or 5 speed automatic; 10 or 5 speed manual.

Chart Speeds—½″ per hour to 8″ per min. or 12½ mm per hr. to 200 mm per min.

Case—Series "E"—Flush, wall or bench mounting.

Options—Electrical programmed printing of points, dual range, print-on alarm, variable span and zero, up to 6 common or selective alarms.

Prices—From $1,520.

X-Y Recorders

Model X-Y 8511 with 8.5″ x 11″ chart priced from $1,450

Model X-Y 1117 with 11″ x 17″ chart priced from $1,550

Writing—Ink.

Repeatability—±0.1%.

Slewing Rate—35 inches per second.

Paper Positioning—Illuminated graticule.

Amplifiers—Interchangeable, plug-in.

OPTIONAL PLUG-INS

Maximum Sensitivity—0.1 MV per inch.

Zero Offsetting—Up to ±5 V DC.

Time Base Sweep—Variable, up to 10 inches per second.

Note: Esterline Angus X-Y Recorders are for sale in North and South America only.

Direct Writing Recorders

Single 4½" Channel Curvilinear

Chart—6" wide, 103' long, 4½" calibrated width, curved coordinates.

Writing—Ink.

Response—To ½ second.

Accuracy—To 1%.

Measuring Elements—Electrodynamometer or Permanent-Magnet Moving-Coil.

Records—Microamperes, milliamperes, amperes, millivolts, volts, watts, vars, KVA, frequency, Pf, pressure, vacuum, speed, position.

Chart Drives—Series "A"—Synchronous motor, spring, motor-wound spring, Selsyn.

Chart Speeds—¾" per hour to 3" per second or 12½ mm per hour to 100 mm per second.

Cases—Series "A"—Portable, flush, wall, front switchboard, twin.

Prices—From $475.

Two 2" Channels Curvilinear

Chart—6" wide, 103' long, each channel 2" calibrated width, curved coordinates.

Writing—Ink.

Synchronized Records—Two complete recording systems side-by-side.

Response—To ½ second.

Accuracy—To 1%.

Measuring Elements—Permanent-Magnet Moving-Coil.

Records—Microamperes, milliamperes, amperes, millivolts, volts. Through use of appropriate transducers will also record watts, volts, Pf, amperes, vars, frequency, phase angle.

Chart Drives—Series "A"—Synchronous motor, spring, motor-wound spring, Selsyn.

Chart Speeds—¾" per hour to 3" per second or 12½ mm per hour to 100 mm per second.

Cases—Series "A"—Portable, flush, wall, front switchboard, twin.

Prices—From $730.

Analog Event

Chart—6" wide, 103' long, 2¾" calibrate width and curved coordinates in analo channel, 8 event channels.

Writing—Ink.

Response—To ½ second.

Accuracy—To 1%.

Measuring Elements—Electrodynamomete or Permanent-Magnet Moving-Coil in an log channel. 6, 7 or 8 event elements.

Records in Analog Channel—Microampere milliamperes, amperes, millivolts, volt watts, vars, KVA, pressure, vacuum, spee position. Through use of appropriate tran ducers will also record Pf, frequency an phase angle.

Chart Drives—Series "A"—Synchronou motor, spring, motor-wound spring, Selsy

Chart Speeds—¾" per hour to 3" per se ond or 12½ mm per hour to 100 mm pe second.

Cases—Series "A"—Portable, flush, wal front switchboard, twin.

Prices—From $625.

Minigraph Recorder

When you order the Esterline Angus Minigraph, you get a miniature recorder of unsurpassed durability and versatility whether you use it in laboratory, industry, aerospace or education.

You'll like the price ($99.50), the size (3⅝" wide, 5⅝" high, 4⅜" deep) and the weight (3½ pounds). And there's a lot more to like about the Minigraph.

Inkless Recording

Take inkless recording, for example. The Esterline Angus Minigraph employs a special stylus. It is firmly positioned against pressure sensitive paper by an impact plate.

You can choose from 14 chart speeds ranging from ⅛ inch to 60 inches per hour. To change speeds, you simply install a new gear train.

All Esterline Angus charts are the same active width (2⅛") with space for an event marker to record in the right margin.

Taut Band Measuring Element

Diamonds might be a girl's best friend. But there are no diamonds or other jewels to wear in the Minigraph. In their place is a taut band movement which is much more resistant to shock and vibration than pivot or spring movements. The movement is friction-free because there are no parts to wear. This prolongs the life of the movement indefinitely.

Accuracy is an exceptional ±2%, and full scale response is one second. Maximum sensitivity is 10 microamperes full scale.

Designed for OEMs

The compact size and low cost of the Minigraph makes it easy to add recording ability to other equipment.

Original Equipment Manufacturers will like the ease with which the Esterline Angus nameplate snaps out for private labeling. The nameplate also conceals the readily accessible zero adjust.

The Esterline Angus Minigraph has four basic movements—zero to 10 microamperes, zero to 50 microamperes, zero to 100 microamperes and zero to one milliampere. The six DC voltage ranges range from one to 500 volts.

Hook-On to Something Good

Outstanding options for the Minigraph are two Hook-On Current Transformers for AC current measurements. A convenient range change dial provides six AC ranges from 250 to five amperes.

Direct Writing Recorders

Single 4½" Channel Recti Graph®

Chart—6" wide, 103' long, 4½" calibrated width, straight coordinates.

Writing—Ink or inkless.

Response—To ½ second.

Accuracy—To 1%.

Measuring Elements — Permanent-Magnet Moving-Coil.

Records—Microamperes, milliamperes, amperes, millivolts, volts. Through use of appropriate transducers will also record watts, volts, Pf, amperes, vars, frequency, phase angle.

Chart Drives — Series "A" — Synchronous motor, spring, motor-wound spring, Selsyn. Series "S"—Synchronous motor from single speed to 14 speed automatic drives.

Chart Speeds—¾" per hour to 3" per second or 12½ mm per hour to 100 mm per second in Series "A." ¾" per hour to 6" per second or 12½ mm per hour to 200 mm per second in Series "S."

Cases—Series "A"—Portable, flush, wall, front switchboard, twin. Series "S"—Portable or flush with 8" by 8" front.

Prices—From $580.

Two 2³⁄₁₆" Channels Recti Graph®

Chart—6" wide, 103' long, each channel 2³⁄₁₆" calibrated width, straight coordinates.

Writing—Ink or inkless.

Synchronized Records—Two complete recording systems side-by-side.

Response—To ½ second.

Accuracy—To 1%.

Measuring Elements — Permanent-Magnet Moving-Coil.

Records—Microamperes, milliamperes, amperes, millivolts, volts. Through use of appropriate transducers will also record watts, vars, Pf, amperes, frequency, phase angle.

Chart Drives — Series "S" — Synchronous motor from single speed drives to automatic drives with 14 immediately dialable speeds.

Chart Speeds—¾" per hour to 6" per second or 12½ mm per hour to 200 mm per second.

Cases—Series "S"—Portable or flush. Flush is 8" by 8" front.

Prices—From $910.

Two 4½" Channels Recti Graph®

Chart—11" wide, 120' long, each channel 4½" calibrated width, straight coordinates.

Writing—Ink or inkless.

Synchronized Records—Two complete recording systems side-by-side.

Response—To ½ second.

Accuracy—To 1%.

Measuring Elements — Permanent-Magnet Moving-Coil.

Records—Microamperes, milliamperes, amperes, millivolts, volts. Through use of appropriate transducers will also record watts, vars, Pf, amperes, volts, frequency, phase angle.

Chart Drives—Series "E"—15, 10 or 5 speed automatic; 10 or 5 speed manual.

Chart Speeds—½" per hour to 8" per second or 12½ mm per hour to 200 mm per second.

Case—Series "E"—Flush, wall or bench mounting.

Prices—From $1,170.

Four 2³⁄₁₆" Channels Recti Graph®

Chart—11" wide, 120' long, each channel 2³⁄₁₆" calibrated width, straight coordinates.

Writing—Ink or inkless.

Synchronized Records—Four complete recording systems side-by-side.

Response—To ½ second.

Accuracy—To 1%.

Measuring Elements — Permanent-Magnet Moving-Coil.

Records—Microamperes, milliamperes, amperes, millivolts, volts. Through use of appropriate transducers will also record watts, vars, Pf, amperes, volts, frequency, phase angle.

Chart Drives—Series "E"—15, 10 or 5 speed automatic; 10 or 5 speed manual.

Chart Speeds—½" per hour to 8" per second or 12½ mm per hour to 200 mm per second.

Case—Series "E"—Flush, wall or bench mounting.

Prices—From $1,800.

Event Recorders

20 Channels Event

Chart—6" wide, ink is 103' long, inkless is 81' long, 20 off-position lines ¼" apart for writing elements.

Writing—Ink or inkless.

Writing Elements—5, 10, 15, 20 ink. 10 or 20 inkless.

Response—Presence or absence of an event of 15 millisecond duration causes writing element to deflect.

Measuring Elements—Deflection caused by electromagnets rated for any one AC or DC voltage from 2 to 250.

Chart Drives — Series "A" — Synchronous motor, spring, motor-wound spring, Selsyn. Series "S"—Synchronous motor from single speed to 14 speed automatic drives.

Chart Speeds—¾" per hour to 3" per second or 12½ mm per hour to 100 mm per second in Series "A" or ¾" per hour to 6" per second or 12½ mm per hour to 200 mm per second in Series "S."

Cases—Series "A"—Portable, flush, wall, front switchboard, twin. Series "S"—Portable or flush with 8" by 8" front.

Prices—From $455.

Galvanometer Recorders With 1 MV Sensitivity

Pen Response—½ second full span.

Input Impedance—Potentiometric.

Source Impedance—Up to 10K.

Available Millivolt Ranges—0-1 MV to 0-100 MV.

Multi-Range—0-1/5/10/50/100/500 MV. 0-1/5/10/50/100 V DC.

Operating Temperature Range—+20° F to +120° F.

Power Supply—120 V ±10%—50, 60 Hz.

Zero Stability—Three-position switch provides for source impedance compensation.

Source Impedance	Switch Position	Maximum Zero Offset
less than 10 K	1	0.5 μV/°C
1 K to 3 K	2	0.75 μV/°C
3 K to 5 K	3	0.75 μV/°C

Writing System — Capillary and constant head ink or alternate inkless.

Special Op-Amp Options—Consult factory. Available are low input impedance microamp input, temperature compensation, electrical zero, fixed suppression.

Prices—From $625.00.

ESTERLINE

Speed Servo® Recorders

Single 4½" Channel Speed Servo®

Chart—6", wide, 103' long, 4½" calibrated width, straight coordinates.

Writing—Ink.

Servo Motor—Linear motion DC. Only the pen moves.

Amplifier—Sold state, except for one high impedance input tube.

Maximum Source Impedance— Up to 100,000 ohms. Off balance input impedance 500,000 ohms minimum.

Step Response—⅛ sec. full 4½" span.

Ranges—0-1 MV DC or higher.

Accuracy—±0.5% of span.

Chart Drives—Series "S"—Synchronous motor from single speed drives to automatic drives with 14 immediately dialable speeds.

Chart Speeds—¾" per hour to 6" per second or 12½ mm per hour to 200 mm per second.

Cases—Series "S"—Portable or flush. Flush has 8" by 8" front.

Options—Adjustable Zero Adjustable Span (AZAS), retransmitting potentiometer, ratio recording circuit.

Prices—From $1,045.

Two 4½" Channels Speed Servo®

Chart—11" wide, 120' long, each channel 4½" calibrated width, straight coordinates.

Writing—Ink.

Synchronized Records—Two complete recording systems side-by-side.

Servo Motors—Linear motion DC. Only the pens move.

Amplifiers—Modular solid state except for one high impedance input tube.

Maximum Source Impedance—Up to 100,000 ohms. Off balance input impedance 500,000 ohms minimum.

Step Response—⅛ sec. full 4½" span.

Ranges—0-1 MV DC or higher.

Accuracy—±0.5% of span.

Chart Drives—Series "E"—15, 10 or 5 speed automatic; 10 or 5 speed manual.

Chart Speeds—½" per hour to 8" per second or 12½ mm per hour to 200 mm per second.

Case—Series "E"—Flush, wall or bench mounting.

Options—Adjustable Zero Adjustable Span (AZAS), retransmitting potentiometer, solid state alarms.

Prices—From $2,480.

Single 10" Channel Speed Servo®

Chart—11" wide, 120' long, 10" calibrated width, straight coordinates.

Writing—Ink with inertial ink pump.

Servo Motor—Linear motion DC. Only the pen moves.

Amplifier—Solid state.

Maximum Source Impedance—Up to 100,000 ohms. Off balance input impedance 500,000 ohms minimum.

Step Response—2/10 second full 10" span.

Ranges—0-1 MV DC or higher.

Accuracy—±0.4% of span.

Chart Drives—Series "E"—15, 10 or 5 speed automatic; 10 or 5 speed manual.

Chart Speeds—½" per hour to 8" per second or 12½ mm per hour to 200 mm per second.

Case—Series "E"—Flush, wall or bench mounting.

Options—Adjustable Zero Adjustable Span (AZAS), retransmitting potentiometer, solid state alarms.

Prices—From $1,440.

Oscillo Graph Recorders

Portable Single 30 mm Channel

Chart—200' long with 1 channel 40 mm wide. Full scale excursion is 30 mm.

Writing—Direct-Carbon-Transfer.

Frequency Response—DC to 125 Hz (down 3 db from full scale).

Rise Time—3.2 milliseconds, 10-90% of full scale.

Sensitivity—5 millivolts to 5 volts per mm.

Inputs—Single-ended or balanced to ground with 2.5 megohms input impedance either side to ground. Built-in amplifier.

Case—Series "O".

Chart Drive—Push button controlled.

Chart Speeds—From 1 to 100 mm per second.

Event Markers—One optional.

Prices—From $700.

Portable 2 or 3 (30 mm) Channel

Chart—200' long with 3 channels. Each channel 30 mm wide.

Writing—Direct-Carbon-Transfer.

Frequency Response—DC to 125 Hz (down 3 db from full scale).

Rise Time—3.2 milliseconds, 10-90% of full scale.

Sensitivity—5 millivolts to 5 volts per mm.

Inputs—Single-ended or balanced to ground. Separate plug-in amplifiers for each channel.

Case—Series "O".

Chart Drive—Push button controlled.

Chart Speeds—From 1 to 100 mm per second.

Event Markers—One standard. One optional.

Prices—From $1,770.

Portable Single 40 mm Channel

Chart—80' long with one channel 40 mm wide.

Writing—Rectilinear, heat writing.

Frequency Response—DC to 75 Hz (down 3 db at 10 mm p to p). DC to 50 Hz (down 3 db at 40 mm p to p).

Sensitivity—15 switch selected values of 0.05, 0.1, 0.2, 0.5, 1, 2, 5, 10, 20 MV per mm and times 100 of above sensitivities.

Input—Floating (maximum 250 V DC). Input impedance 10,000 ohms on 0.05 MV/mm. Sensitivity increasing to a maximum of 4 megohms on 2 V/mm sensitivity.

Chart Speeds—1, 2, 5, 10, 25 and 50 mm per second. Selectable through transmission.

Case—0-501 portable.

Event Markers—One standard for manual actuation.

Options—Carrying case.

Prices—From $725.

Other Products

Modular Oscillo Graph

ction A—S-21129 Pen Motor, Without Am-
plifier—Pen motor sensitivity is 100 ma/
c ±10%

Resonance—48 Hz (without stylus).

Price—$215.

ction B—S-21129 Pen Motor, With Am-
plifier—Sensitivity is 15 mv/cm maxi-
m, 100 mv/cm minimum.

Frequency Response—Down 1 DB maxi-
mum at 50 Hz at 25 mm peak-to-peak.

Power Requirement—120 V ±10%, 50 or
60 Hz.

Price—$340.

SPECIFICATIONS COMMON TO OPTIONS A AND B

earity—±2% of full scale.

iting—Rectilinear, with heated stylus.

art Paper Width—60 mm.

art Grid Width—50 mm.

art Length—25 meters.

art Speeds—25 and 50 mm per second,
ctrically switched.

Auto-Attenuator

plication—For use with any high imped-
ce recorder to provide maximum reso-
tion records of widely varying voltage
gnals such as those found in gas chroma-
graphy or mass spectrometry.

e all solid state Auto-Attenuator pro-
les signal attenuation rates as fast as
milliseconds per step through a dy-
mic 12 step range from 1 to 2,048 times
e recorder's basic calibration. The re-
rder triggers the attenuator through a
n position signal or high-low alarms.

put Span—1MV minimum, 100V maxi-
um.

gnal Input Impedance—20,000 ohms.

wer Input—10VA, 120V ± 10V, 50 or
Hz.

ption—On-chart record of attenuation
ep changes.

ices—From $550.

DC Voltage Standard

Output

Voltage Range—0 to ±11.1110 V DC in five decades; ±1 MV DC vernier.

Attenuator—Built-in, 100:1, 100 ohms source impedance.

Current Capability—0 to 50 MA, short circuit proof.

Accuracy—0.005% of reading ±50 μV at 23°C. ±0.0002% per degree C.

Noise—0.001% of reading +50 μV.

Recommended Recalibration Interval—6 months.

Output Impedance

DC—10 millohms.
Dynamic—L ≲ 10 μH; R=2 ohms.

Common Mode—±500 V maximum.

Operating Temperature—0° to +60°C.

Power Requirements—117 or 243 V AC, 47 to 420 Hz, 10 watts maximum, R. F. filter included.

Dimensions—3½" high, 8½" wide, 12" deep. 19" rack mounting adapter available.

Price—$625.

Charts and Ink

The best instrument is only as good, as reliable and as accurate as the chart on which essential information is recorded. Because only perfection in every aspect of chart production is good enough, Esterline Angus engineers have designed and constructed presses and auxiliary equipment which produce charts to exacting specifications. This equipment holds all charts printed in the plant to precise tolerances.

Most chart orders can be filled within seven working days. A liberal quantity discount policy is in effect. In fact, if you use more than 500 charts a year, write for a special annual pricing agreement.

Years of exacting research have led Esterline Angus to the production of an ink which is ideal for use in recorders. It's specially filtered and packaged in polyethylene bottles which are ultrasonically cleaned. It does not evaporate quickly in the ink reservoir, yet it dries quickly on the chart to prevent smearing. It has sufficient body to produce a clear record, yet it flows freely and will not clog the pen. Esterline Angus ink is available in red, green or black.

Function Generator

Output Waveforms—Sine∼, square ⊓⊔ or triangle ∧∨ wave forms switch selected. Any one of these variable voltage level wave forms is available simultaneously with a sine wave of fixed 10 V peak-to-peak level.

Frequency Range—.01 Hz to 100 KHz in 7 decade ranges.

Sine Wave Distortion—
<1% .01 Hz—20 KHz
<5% 20 KHz—100 KHz

Square Wave Response—
<1 microsecond rise and fall time on all ranges.

Triangle Linearity Error—
<1% .01 Hz—20 KHz
<5% 20 KHz—100 KHz

Power—
120 V ±10%, 50 or 60 Hz, 20 VA maximum.
220 V ±10%, 50 Hz available.

Dimensions—12" wide, 2 3/16" high and 8⅞" deep (add ⅝" to depth for protrusion of front terminals).

Price—$310.

Ultrasonic Cleaners

Select one of four models to meet your tank size and cleaning power requirements.

Model EA 32 (upper left)
Tank size—11" x 6" x 6" d
Cleaning power—150W
Price—$225, 120V 50/60Hz
$255, 240V 50/60Hz

Model EA 220 (upper left)
Tank size—5" x 9" x 4" d
Cleaning power—100W
Price—$100, 120V 50/60Hz
$120, 240V 50/60Hz

Model EA 12 (lower left)
Tank size—5" x 5" x 3" d
Cleaning power—50W
Price—$60, 120V 50/60Hz
$70, 240 50/60Hz

Model EA 2 (lower right)
Tank size—3½" x 3½" x 2⅝" d
Cleaning power—25W
Price—$50, 120V 50/60Hz
$60, 240V 50/60Hz

ESTERLINE TELEPHONE 317/244-7611

Flat Bed or Moving Paper, Omnigraphic™ X-Y Plotters Continue to Offer More Features, Less Cost

Feature for feature, model for model— a superior X-Y with unmatched flexibility:

- ☐ Both 8½″ x 11″ and 11″ x 17″ charts
- ☐ A choice of 12 interchangeable modules from $25. to $420.
- ☐ English/Metric scaling switch
- ☐ Vacuum paper hold down
- ☐ 20 in/sec. speed
- ☐ ± .2% overall accuracy
- ☐ Electric pen lift
- ☐ Disposable non-drying pens

Model 2000—$795. + modules

Strip Chart recording with multi speeds and wide range of input functions:

- ☐ Paper size: 10″ (25cm) x 100′
- ☐ Nine pushbutton selectable speeds from .05 to 20 in./min.
- ☐ Nine interchangeable Y axis modules
- ☐ Positive paper feed or roll take-up
- ☐ Rack, panel or bench mounting
- ☐ Electric pen lift
- ☐ Event marker
- ☐ All solid state electronics

Model 3000—$710. + modules

High speed point plotting for the Nuclear Lab:

Here is the popular OMNIGRAPHIC™ point plotter designed for use with pulse height analyzers, digital oscilloscopes, DVM's, counters or scanners. Simply plug in the 6550 and you get:

- ☐ A plotting speed of 1200 points/minute
- ☐ Four Step resolution from 0.025″ to 0.10″
- ☐ High accuracy of ± 0.2% with ± 0.1% repeatability
- ☐ Manually selectable 6 character printer head
- ☐ Z-fold chart paper tears to file size
- ☐ Bi-directional paper movement
- ☐ Plugs into the following Pulse Height Analyzers with only a cable change:

Fabri-Tec	**Intertechnique**	**Laben**	**Northern Scientific**	
Nuclear Data	**Packard**	**RCL-RIDL**	**TMC**	**Victoreen**

Model 6550—$2850

X-Y Plotting is now more convenient with the Omnigraphic™ 6450 because it has all the advantages of conventional X-Y's, yet offers:

- ☐ Z-fold paper eliminates hand loading of individual charts
- ☐ Automatic index or reversal of chart on command—local or remote.
- ☐ Slewing speed 20 in/sec. on Y (pen) axis and 15 in/sec. on X (paper) axis.
- ☐ 18 calibrated DC voltage ranges (continuously variable between ranges).
- ☐ Input impedence 1 megohm, all ranges fixed and variable
- ☐ Accuracy ± 0.2% of full scale, repeatability ± 0.1%
- ☐ 11″ x 17″ recording surface
- ☐ Pen control local or remote
- ☐ Front panel switch for automatic English/Metric scaling
- ☐ Ask about 2 pen model 6452

Model 6450—$1950

rustrak miniature chart recorders

Dependable miniature instruments for permanently recording power, temperature, pressure, strain, events or virtually any parameter that can be converted into an electrical signal. • Inkless, dry writing, rectilinear recording with wide range of sensitivities, writing and chart speeds. • Operate as chart tearoff or reroll. Quick, easy chart review and rewind. Sliding access window. • Most units about 5⅝"H, 3⅝"W, 4⅛"D. Weight about 3½ lbs. • Rugged die-cast aluminum case in epoxy suede-like charcoal gray finish. • Accuracy ±2% of full scale. Response time 0.8 sec. to 1.0 sec. Usable chart widths: single channel — 2-5/16", dual channel — 1" each.

Single Channel DC Recorder.

Basic recorder in the Rustrak line. Ranges from 0-10 microamperes to 0-5 amperes DC; 0-10 millivolts to 0-500VDC. Multipliers and shunts available. Chart speeds 1/32" to 480" per hour. Many available options, features and accessories. AC models also available.

from **$99.50**

Temperature Recorders.

Wide variety of temperature recorders using thermocouples, thermistors or nickel wire sensors. Ranges from −100°F. to +2400°F. and custom spans as narrow as 25°F. Also available in °C. and in single or dual channels.

from **$148.00**

2122

Event Recorders, Models 292-4 & 292-8.

Four or eight channels. Records worktime, productivity of machines and personnel; provides data for time study, cost analysis, security control. Chart speeds to 50 inches per minute with definition of up to 16 events per second.

from **$103.00**

292-8

Dual Channel DC Recorder.

Same as basic Model 288 except dual channel with two galvanometers. Available in combinations of current and voltage or different ranges each channel. Useable chart width, 1" per channel. AC models also available.

from **$143.50**

New Dual Width '300' SERIES RECORDERS

double the data at your fingertips. Combine in one housing two Standard Series '200' recorders on a common time basis, using a single chart.

Model shown: 3162/3144 Gas or Liquid Pressure & Temperature Recorder **$370.00**

Rustrak can develop many types of recorders to suit special requirements.

Recording-Controller Feature.

ON-OFF solid state controller feature available as option on most Rustrak recorders. Controls up to 5 amps resistive load at 30 VDC or 115 VAC. Set points continuously adjustable over entire chart range. Option price added to cost of companion recorder. Not available separately.

2133/F204AB

from **$95.00**

One Microampere DC Recorder.

Solid state with full-scale sensitivity of 1 microampere, range of 0 to 10 millivolts DC and input impedance of 10,000 ohms. For use as temperature bridge and strain gauge readout or as a recorder accessory for laboratory and process instruments.

$180.00

191

Multipurpose Recorder.

Two recording channels, one analog, one event. Twenty-one ranges up to 1000 millivolts, microamperes or milliamperes on analog channel. Displays 7½ inches of chart. On-off event marker has 10 millisecond response time. Carrying handle doubles as tilting support.

$425.00

Pressure Recorder.

Single channel pressure recording of most liquids and gases using a C-type Bourdon tube. Standard ranges 0-15, 0-30, 0-50, 0-100, 0-200, 0-300 and 0-500 psi. Many special offset ranges available.

from **$110.00**

Strain Gage Recorder.

Records resistance change of gages used for measuring strain, stress, displacement, load, torque, or any transducer using strain gauge sensing elements for static display. Maximum sensitivity: 500 micro-inches/inch, Self-contained instrument with regulated supply.

from **$385.00**

2195

192

Dissolved Oxygen/Temperature Recorder.

Simultaneously records dissolved oxygen and temperature. Temp. range, 0 to 40°C. Operates unattended for about four weeks from two inexpensive batteries. Chart speed regulation, ±0.5%. For surveys in water pollution control programs.

$585.00

techni-rite RECORDERS

High speed, direct writing recorders and monitoring and controlling systems for industrial, military, aerospace and medical applications.

LOW COST LINEUP OF HIGH SPEED ANALOG RECORDERS

PORTABLE 8-CHANNEL

- Only 17½" Wide x 19" High x 6" Deep
- Weighs Just 65 Pounds
- Inkless Rectilinear Presentation
- 4 to 5 Millisecond Rise Time
- Rugged Construction for Lab or Field
- Other Plug-In Signal Conditioners:
  1 mv/div
  50 uv/div
  Stress, Strain, Transducer
  Temperature, Thermocouple

ONLY $3,995

A complete system with 10 mv/div Signal Conditioners

PORTABLE 1-CHANNEL
ONLY $495

PORTABLE 2-CHANNEL
ONLY $1,195

- DC to 125 Hz Frequency Response
- Inkless, True Rectilinear Coordinates
- Electric Chart Speed Selection
- Compact and Portable
- Rugged Construction for Lab or Field
- Complete Range of Accessories and Special Purpose Preamplifiers

O.E.M. RECORDER BUILDING BLOCKS
Pen Motors, Amplifier and Chart Drives

1-2-3-4 and 8-CHANNEL

- Amplifier Inside Pen Motor
- Stylus Limiters Inside Pen Motor
- Choice of Chart Drive
- Inkless Rectilinear Recording
- Extreme Compactness — only 5½" high
- Simple Chart Loading
- Meets AHA Specifications

20-40-60 CHANNEL EVENT RECORDERS

for monitoring "ON-OFF," "GO-NO-GO" data continuously on a common time base

- 3 Millisecond Response (There are none faster!)
- Continuous, Deflection Type, Inkless Writing
- Accepts Switch Closure Signals or External Voltages
- Variable Chart Speed Selection
- Portable or Panel Mounted

Exclusive ANA-VENT 2-IN-1 RECORDERS

combine Analog and Event data on a single chart

- Simplifies Data Interpretation
- Minimizes Analysis Error
- Saves Time, Space and Money

Eight basic models available — combinations ranging from 8 channels of analog data with 10 channels of event data to 1 channel of analog with 64 channels of event.

SERVO GRAPHIC RECORDERS

MODEL 28

Basic recorder for standard rack mounting. 10" calibrated width, 100' chart roll and simple, dependable re-roll techniques provide reliable low cost industrial recording. 10 mv to 100 volt full scale spans are available. Wide selection of 2, 3 or 4 chart speeds.
19"W - 10½"H - 8½"D from $305.00

- 1/2% ACCURACY
- SPANS TO 5 MV FULL SCALE
- PEN SPEED 10"/SECOND
- NEW DISPOSABLE FIBER PEN
- MODULAR – SOLID STATE

ALL Y-LAB RECORDERS EMPLOY A TRUE POTENTIOMETRIC NULL BALANCE SYSTEM AND WILL OPERATE FROM A SIGNAL SOURCE RESISTANCE UP TO 20KOHMS. ALL ELECTRONICS ARE CONTAINED ON ONE EASILY REPLACEABLE PC BOARD. THE GREAT ACCURACY, VERSATILITY AND RUGGED SIMPLICITY OF THESE INSTRUMENTS, COUPLED WITH THEIR REMARKABLY LOW PRICE, MAKE THEM TECHNICALLY PRACTICAL IN ALL RECORDING APPLICATIONS.

MODEL 29

Essentially a Model 28 with 2 overlap ping pens. Two completely independ ent and isolated channels of data ca be recorded with a minimum of tim offset. A remote capillary ink syster with felt nibs gives a fine line recorc ing at maximum pen speed.
19"W - 10½"H - 8½"D from $545.0

MODEL 31

Ideal price, size and performance for OEM and systems applications. Uses 4" calibrated fanfold paper for "quick reference". 5 mv to 100 volt full scale spans are available. Wide selection of single or dual chart speeds.
6"W - 5"H - 9"D from $195.00

MODEL 32

Precision compact laboratory recorde with a wide range of options – very lo cost. 5" calibrated chart on an 85' ro with handy tear-off bar. 5 mv to 10 volt full scale spans are available. Wid selection of single or dual chart speeds
10¼"W - 4"H - 11"D from $275.0

MODEL 40

A new and truly unique X-Y Plotter for laboratory and production testing. It is small, ruggedly simple and very easy to operate. Both X and Y axes use the same proven interchangeable modular servo amplifiers used in our strip chart recorders. Standard 8½" x 11" graph paper can be used and pen/paper speed is 10"/second without overshoot. Spans from 1 mv/inch to 10 v/inch are available. Electric pen lift is one of many options.
15"W - 9"D - 4"H from $395.00

AEROSPACE RESEARCH INC.

RADIO DEVICES, RF RANDOM NOISE GENERATORS, PRECISION FREQUENCY AND TIMING INSTRUMENTATION *for laboratory, production lines and field operations.*

PHASE AND AMPLITUDE STABLE AMPLIFIERS

ARI specializes in amplifier systems for use with high insertion loss elements, such as delay lines. Driver amplifier shown, Type A, provides 34 db gain at 60 Mc/s. BW is 30 Mc/s, output 1 watt phase stability within 2°, amplitude within 0.25 db. Post amplifier, Type B, provides 54 db gain with 250 MW output to follow lossy element.

These amplifiers can be packaged in standard multiple chassis as shown above. Unit holds 30 ARI modules, plus power supply and fans, where required. Other rack-units hold 2, 4, or 15 units.

SOLID STATE ANTENNA MULTICOUPLERS

VLF-UHF combining optimum noise figure, dynamic range, intermodulation distortion and VSWR. Units shown are AMC-110 (3-300 Kc/s) and AMC-136 (130-140 Mc/s). Other units at HF and UHF. Prices start at $310.

RECEIVERS — ULF-UHF

ARI designs and manufactures receivers for standard and special purposes. Included are our VLF rocket and satellite units, LF beacon, HF radar, VHF radar, UHF balloon, Dopplometers, and many others. Write for free receiver catalog . . . or send us your specifications.

RADIO ASTRONOMY

ARI is eminent in the field of radio astronomy equipment at metric and longer wavelengths. Our radiometers are in constant use in almost every part of the world. In addition to the items shown, we manufacture a Polarimeter of the Cohen configuration in the HF-VHF range, various receivers for measuring cosmic noise intensities on the ground and in space, and special antenna systems. ARI Random Noise Generators are standard equipment at many observatories for radiometer system calibration. Send for free Radio Astronomy brochure.

EDSON RADIOMETER

The ER-110 can be used ith any HF-VHF receiver to form a precision 0.1 db long-term stability radiometric instrument. It makes use of a closed-loop Ryle-Vonberg configuration to continuously calibrate to a thermionic servo diode.

ARI-100C RIOMETER MARK II

A highly sensitive, ultra-stable instrument for measuring intensities of electro-magnetic fields. The RIOMETER is used principally for recording changes in ionospheric absorption of extra-terrestrial radio noise. Features 0.1 db long-term stability.

PHASE SWITCH

The ARI-140 Phase Switching Receiver is a complete phase sensitive interferometer (less antennas) in a single package. Based on the Ryle configuration, the unit enables precise measurement of the interferometer pattern. The ARI-140 is equipped with plug-in r.f. heads to cover a range from 3-250 Mc/s.

RF RANDOM NOISE GENERATORS

STABILITY, ZERO- WARM-UP TIME, FREQUENCY COVERAGE 100 c/c TO 2000 mc/s. ARI Random Noise Generators provide the unique feature of servo-control of the output level to insure stability with variations in line voltage and ambient temperature. The units are specifically suitable for continuous production-line testing and for calibration of sensitive receivers and radiometers. Other advantages gained from the servo-control system are excellent long-term stabilities (0.05 db), and millisecond warm-up. A remote programming capability is standard equipment providing the ultimate in resettability. Another unique feature of ARI noise sources is meter calibration in both db noise figure and degrees Kelvin.

The Model NS-L is the only commercially available device that provides RF random noise at laboratory accuracies in the VLF ranges. It uses lightweight rechargeable batteries to completely rid the output signal of power-line contamination.

Model	Frequency	
NS-L	100c/s-500 Mc/s	$845.°
NS-B	1-500 Mc/s	450.
NS-H	1-2000 Mc/s	825.

PRECISION FREQUENCY AND TIMING

LORCHRON*

Loran-C Timing Receiver. Latest techniques, incorporating integrated-circuit micrologic. All-electronic servo system, lightweight and portable. TIMING SYNCHRONIZATION TO ONE MICROSECOND within Loran-C area.

DIGICHRON*

Numerical readout of hours, minutes and seconds. Thumb-wheel digital switch to set output pulse delay from 0 to 999,999 microseconds. Useful with any clock standard for display, and removal of propagation delay.

LORCHRON-C

For frequency comparison and synchronization. NO DIURNAL SHIFT, as experienced at VLF, within Loran-C area. Measurement can be made to 1×10^{-9} in two minutes, and 1×10^{-12} in a day.

* TM

LORAN-C

Thirty Loran-C stations are currently in operation with locations in Europe, Africa, the North Atlantic, Continental U.S., Alaska, Hawaii, and in the vicinity of Japan. Operation is on an assigned frequency of 100 Kc/s is controlled to atomic standards. Times of transmission of some of the chains are being steered by the Naval Observatory to provide synchronization to the Observatory Master Clock.

The instruments shown can be used to derive time reference and frequency synchronization for Loran-C signals. In addition, ARI manufactures Loran-C r.f. amplifier units, repetition rate generators, simulators, and antenna systems. Send for our free brochures on Loran-C Timing and Instrumentation.

RF TIME DISTRIBUTION

Range timing by transmission of RF signals modulated by standard IRIG codes is a simple technique for covering a large area at minimum cost. ARI manufactures complete systems to suit any requirement, and can provide field services for installation, operation, and maintenance. Transmitters are available for AM and FM service using either single, or multiplexed time codes. Receivers such as the airborne TCR-136 or the ground based TCR-141 as shown are available in both AM and FM configurations to suit your particular timing needs. Send for free brochure.

LOOP ANTENNAS

Crossed-loop (shown), single loops and loop-whip cardiod arrays, ULF-HF. General purpose L1-L single loop available from stock is balanced, electrostatically shielded and has an effective height of 1 cm at 20 Kc/s. $140.

...the industry's leader in proven high reliability

SCHOTTKY-BARRIER & TUNNEL DIODE DETECTORS

Features:
- Low VSWR
- Flat Response
- Extreme Reliability
- Extra Wide Video Bands
- Very Low I/f Noise Corner
- High Sensitivity
- Optimized Units for maximum performance
- Wide Dynamic Range over Octave and W/G Bands
- Custom Units designed to your specifications

53 Models Available — **Delivery: Stock to 30 days ARO**

...the industry's most comprehensive selection

ORTHOSTAR DOUBLY BALANCED SCHOTTKY MIXERS

Features:
- Subminiature Size
- Octave RF Bandwidths
- Broad IF Bandwidths
- Improved Intermodulation Performance
- High Isolation

Typical Specifications:
- 1"x1"x1" maximum size (excluding connectors)
- Frequency from 500 MHz to 12 GHz available
- IF Frequency up to 4 GHz available
- Average intercept point greater than +25 dBm
- 20 dB minimum isolation

20 Models Available plus Biased units for low LO power applications — **Delivery: Stock to 30 Days**

...pioneering more knowledgeable designs

TUNNEL DIODE AMPLIFIERS

Features:
- Wide Bandwidths
- Low Noise Figures
- Low Level Limiters
- High Gain
- Space Qualified Performance

Typical Specifications:
- 2 - 18 GHz Octave Band Units Available
- Noise Figure of 3.5 dB at 1400 MHz
- Outputs available from 10 to 20 dBm
- Up to 50 dB Gain
- High-Rel units Available

Standard and Custom Models Available — **Delivery: 60 to 90 Days ARO**

...a complete line of Compact, Lightweight

SOLID STATE TRANSISTOR AMPLIFIERS

Features:
- Available in Octave and Multi-octave Bandwidths
- Excellent Temperature Characteristics
- High Reliability Microstrip Circuitry
- Low VSWR
- Low Noise Figure

Typical Specifications:
- Frequency Range from 10 MHz to 4 GHz
- −54°C to +71°C Operating Range
- MTBF greater than 100,000 Hours
- Less than 1.5:1 input and output
- Noise Figure of 1.5 dB at 200 MHz

50 Models Available — **Delivery: Stock to 60 Days ARO**

SUBSYSTEMS

Aertech's capability extends to the manufacture of complete RF Subsystems for operation from VHF through Ku-Band. These include Preamplifier/Multicoupler RF distribution products for use in wide dynamic range reconnaissance systems. An extensive line of standard and custom design telemetry down converters and receivers operating in both L-Band and S-Band are also available. Although standard catalog devices are available for optimum savings, custom and High-Rel configurations can be designed to meet specific customer requirements.

Aertech's FULL Capability includes...
- Telemetry Products
- Multicouplers
- Down Converters
- Receivers
- Power Dividers
- Log Video Amplifiers
- T.D.A. Limiters
- Vector Detectors
- Sources
- Detector Video Amplifiers
- Mixer/Preamplifiers
- Tunnel & Back Diodes
- 3 dB Hybrid Couplers
- Microwave Semiconductors

For detailed specifications and applications, consult your area Aertech Representative or contact us direct.

SLOTTED LINES

For swept and point-by-point measurements

TYPE 3028

Residual SWR
< 1.02 to 10 GHz
< 1.03 to 18 GHz
With MIL-C-39012 Type N Laboratory Standard Connectors

with interchangeable precision reducers and tunable detector probes

he type 3028 7mm Slotted Line has the following dditional features:

- Rated frequency range: 1.2 to 18 GHz
- Rated error in detected signal ±1.005
- Available with a wide variety of interchangeable precision reducers for measurements in many transmission line sizes and connector types without an intermediate adapter which tends to increase the residual SWR of the measuring system. For example, reducers to Type OSM jack or plug result in a system residual SWR of under 1.06 to 18 GHz.

Partial Listing of Output Connectors Available for Alford Slotted Lines

Type N, TNC, BNC, MICON 1001 and 1002, Sealectro 50-0 series, TPS, OSM TM , GM , GR874B , C, SC, HN, 3⅛ EIA, 1⅝ EIA, ⅞ EIA, LT, LC, GR900 Precifix A , Amphenol APC-7 Other connectors available on request.

Summary of ALFORD Slotted Lines

Frequency Range (MHz)	Line Size	Type
2000-36,000	3.5mm	3501-04
1200-18,000	7mm	3028-05
600-12,400	.4 inch	2288A-1

INSTRUMENTS AND COMPONENTS FOR THE 3.5mm STANDARD LINE SIZE

A wide selection of components are available with the precision sexless ALFORD 3.5AC connector for use up to 36 GHz in both coax and stripline. These are ideal for experimental work, especially at the higher frequencies when a great deal of accuracy and repeatability is required.

- 3510 Sliding Termination
- 3511 Fixed Termination
- Launchers to Stripline
- 3528 Connectors with SWR under 1.085 per pair to 26.5 Ghz
- EasyMatch® Tuners to 26.5 GHz

HYBRIDS

- Inherently broad band with rated isolations over 40dB, substantially independent of frequency.
- Available ranges from 20 MHz to 10,500 MHz.
- High peak power, high CW power and pressurized models available.
- Models available to environmental specifications of MIL-STD-810A.

PRECISION RF TERMINATIONS AND CALIBRATED MISMATCHES

- Fixed and sliding terminations from DC to 36 GHz
- Wide variety of rigid and flexible coaxial transmission line sizes from 6⅛" EIA to subminiature
- Also available in specially compensated bands

STRIPLINE COMPONENTS

- Broadband directional couplers, power dividers, combiners, and launchers.
- Miniature, lightweight, and low priced.
- Available in most connector types.

AUTOMATIC PLOTTERS

for measurement of Phase shift, Attenuation (or Gain) and RF Impedance

- Automatically measure and plot phase shift, insertion loss or gain, and rf impedance as continuous functions of frequency.
- For impedance, accurately measure SWR's as low as 1.01 when observed on 1.2 expanded Smith chart.
- Continuous frequency coverage from 0.025 to 7500 MHz with interchangeable sets of rf components.

OTHER ALFORD PRODUCTS

- Detector-Mixers
- Variable Attenuators
- Matching Tees
- Power Dividers
- Temperature-compensated Resonant Cavities
- Multiplexers
- Diplexers
- Directional FM Broadcast Antennas
- Vestigial Sideband Filters
- VOR Antennas
- Coaxial Switches
- Tracking Antenna Feed Assemblies
- Dipoles
- Automatic SWR Meters
- Adjustable Matching Networks
- TV Broadcast Antennas (directional and omni-directional)
- Line Stretchers
- Impedance Standards

COMPONENTS FOR THE MICROWAVE SYSTEM

Constructing a microwave system requires access to a wide range of components that will perform effectively and efficiently through grueling environments throughout the frequency spectrum. Americon Corporation offers a complete assortment of coaxial components to meet the most demanding requirements. Connectors, terminations, microstrip transitions, adapters (coaxial and waveguide), coaxial attenuators, quadrature hybrids, directional couplers, mixers, and crystal detectors all combine to allow the system designer complete access to a wide variety of components of the highest integrity. For further information write for a complete catalog to Americon Corporation, 87 Rumford Avenue, Waltham, Massachusetts 02154 or phone (617) 891-5230

HIGH POWER SIGNAL SOURCES AND OSCILLATORS
HIGH PERFORMANCE SIGNAL PROCESSING DEVICES

● **CW Signal Sources** • Power to 150W • 150-6100 MHz plug-in heads • 30dB power adjust • Internal 1KHz Sq - wave ulation • External modulation to full power at 50% duty • frequency & power stability • Low residual AM & FM

● **Pulse Signal Sources** • Peak power to 40KW • 150-6100 with plug-in heads • Variable pulse width 0.4-50μs • Variable rate 10-25000 pps to max duty cycle of .0033 • Internal & exte pulse generator & sync

● **Triode Cavity Oscillators** • Plate, cathode, grid pulsed CW • Broadband or fixed tuned • 150-6100 MHz • Power to 40 peak/150W CW • Highly stable • Suitable for lab use or sev Military/Aerospace environments

● **Stripline Signal Processing Devices** • Octave bandwidths • VHF thru X-band • High Isolation • High power handling • Low Insertion loss • Low VSWR • Excellant Amplitude & phase balance • Solid dielectric/epoxy encapsuled • Impervious to severest military/aerospace environments • Products include:

- 90° Hybrids
- Power dividers
- Multiplexers
- Phase shifters
- 180° Hybrids
- Monopulse comparators
- Diode switches
- Mixer/detectors

● **Custom Products** • We'll develop, design, & fabricate • sample quantities or high volume • To your spec requirements Military & Industrial • Products & systems generally using te niques described above Experience includes:

- Airborne pulse & CW transmitters
- Radar simulators
- Linear Accelerator drivers
- Special power oscillators
- Integrated stripline networks
- Remotely controlled phase shifters

Advances in RF from Applied Research

Filters · Converters · Multi-Couplers · Signal Sources
Amplifiers · Multipliers ..... 1 MHz thru Ku band
RF Components ..... Sub-Systems and Systems

BROADBAND FREQUENCY MULTIPLIERS
5-18,000 MHz

SIGNAL SOURCES / SYNTHESIZERS
VACUUM TUBES / SOLID STATE
VARACTOR / SNAP-ACTION DIODES / TRANSISTOR

A complete line of frequency multipliers operating up to 18,000 MHz has been developed and is presented by APPLIED RESEARCH. These units utilize solid state devices, vacuum tube devices or combinations of both.
Using the frequency multiplier as the basic tool, lines of Signal Sources, Frequency Synthesizers and Multiplier Chains are now available.

Some general characteristics are:

Frequency Range:	5 - 18000 MHz
Bandwidths:	up to 27%
Power Output:	up to 10 watts
Efficiency:	as high as 50%

FILTERS (5-12,000 MHz)

MULTIPLEX
BANDPASS / BAND REJECT
LOW POWER / HIGH POWER

By applying advanced network design techniques, Filters have been developed operating in the frequency range up to 12,000 MHz with electrical performance approximating theoretical expectations. In addition to Bandpass, Band Reject and Multiplex Filters, advanced network designs are available for antenna couplers, Diplexers, Interdigital Filters and many other types.

Some general characteristics are:

Frequency Range:	5 - 12,000 MHz
Bandwidths:	up to several octaves
Insertion Loss:	as low as 0.25 dB
Power:	up to 3.5 kW(cw)
Band Reject Notches:	as narrow as ¼% fo
Band Reject Attenuation:	as great as 75 dB

SOLID STATE
LOW NOISE AMPLIFIERS
POWER AMPLIFIERS

- Broad Bandwidth
- Wide Dynamic Range
- Phase & Gain Matching
- Low Noise Performance

APPLIED RESEARCH presents an integrated line of RF amplifiers in both solid state and vacuum tubes for operation in the frequency spectrum up to 4200 MHz. Their truly exceptional performance features many advanced characteristics. Units are also available in weatherproof cases for antenna mounting or other outdoor applications.

Some general characteristics are:

Frequency Range:	up to 4200 MHz
Bandwidths:	up to multiple octaves
Gains:	up to 120 dB
Phase Matching:	to within 1° over an octave
Noise Figures:	as low as 1.5 dB
Power Output:	up to 20 watts

MULTICOUPLERS

ACTIVE
(Model HFM)

3-4000
MHz

HYBRID
(Model PM)

Model HFM and PM Multicouplers provide the ultimate in performance and sensitivity in signal distribution.
Model HFM Active Multicouplers, by combining filter networks and active elements, feature multiple outputs, broad bandwidths (if desired), low noise and high dynamic range.
Model PM Hybrid Multicouplers offer compact size, minimal insertion loss, broad bandwidths (if desired) and low cost.

FIXED PAD ATTENUATORS & TERMINATONS

DC—3GHz

FOR TYPES BNC, TNC
C, N & OSM CONNECTORS

APPLIED RESEARCH presents an integrated line of fixed pad attenuators, terminations and impedance-matching transformers. These products provide means for rapid and accurate division of voltages over the frequency range of DC to 3GHz, and for the matching of different impedances with minimum loss over a broad frequency band. The unit cost is within the practical price range of the large and small equipment user, as well as the research and experimental user.

Some general characteristics are:

Frequency Range:	DC—3GHz
VSWR:	1.25:1
Attenuation Accuracy:	±0.5 dB
Impedances (nominal):	50, 75, 90 ohms
Attenuation values:	1, 2, 3, 4, 6, 10, 12, 15 20 dB (standard)

PEN32	5.4 - 5.9	Phase Shifter	N

They're all available for fast delivery. Need a special microwave device? We're equipped to modify or build to meet your specific requirements. Write or call for our new catalog: Microwave Device Division, The Bendix Corporation, Hurricane Rd Franklin, Indiana 46131. Phone: (317) 736-613

Bendix Electronics

HIGH POWER

Pulse Modulators
Pulse Generators
D.C. Supplies
Transmitters

Cober Electronics, Inc., manufactures a very broad line of High-Power Products. These are assembled to customers' specifications from packaged modules and standard Cober designs, making it as easy and as economical to buy custom equipment as it is to buy standard units. The categories below illustrate the range within which these products fall.

Model 698-L2 Power Amplifier used in FM tropospheric systems provides 1 KW in the 610-985 MHz band.

ansmitters and Power Amplifiers

oposcatter & Satellite Communications & Test

er transmitters are supplied at powers from several hundred watts up to egawatts in the UHF and Microwave frequency areas. They form the t of troposcatter and earth-satellite transmitting systems or designed as test sets for antenna-pattern studies, R.F.I. susceptibility surements, and microwave component testing.

Model 1421 Power Supply drives exotic Crossed Field Amplifier microwave tubes. It contains five supplies in floating arrangement, is highly regulated, and has two modulators for pulsed modes.

C. Power Supplies 5 KV to over a Million Volts

strial and Mil-spec DC supplies offer high regulation up to .001%. tiple output units, with various supplies floating at high voltage are ecialty. Unregulated brute force units that furnish large amounts of er at minimum cost are also available.

Model ST-77 Electronic Crowbar acts within 5 microseconds of an arc or fault to protect valuable microwave tubes and loads.

gh Power Components

cialized high power components and modules are available for tomers building or modifying their own systems. These include: lectronic Crowbars • Electronic Regulators (up to .001% ulation) • Pulse Current Viewing Transformers • High Voltage charge Solenoids.

Model 1445 85 KV Grid Modulator powers T.W.T.'s. Pulse width is variable from 1 to 10 microseconds and rep rate adjustable to over 20KC.

Pulse Modulators 5 KW to 100 Megawatts

Cober's high-power modulators drive a wide range of microwave and power tubes, as well as such devices as laser and plasma tubes. Units are available from a few kilowatts to over 100 megawatts with pulse widths as narrow as 25 nanoseconds to long pulses of thousands of microseconds. State-of-the-art rise times and high rep rates are our specialty. Full mil-spec, solid-state modulators are supplied for systems use, and soft-tube and hard-tube units are supplied for laboratory and industrial applications.

Model 605P 24 KW Pulse Generator, available from stock $3,990.

Pulse Generators 24 KW

Cober's line of pulse generators is characterized by their pulse fidelity and flexibility. The Model 605P shown is a 24 Kw Pulse Generator with a rise time of 20 nanoseconds and pulse widths variable from 50 nanoseconds to more than a millisecond at repetition rates from a single shot to 1 MHz. It is used for driving LSA devices, Gunn diodes, microwave tubes, Pockel cells, and general laboratory applications. Other pulse generators in Cober's line provide pulse widths to D.C. or offer unique characteristics, such as built-in bias supplies to allow convenient use as a grid pulser.

nd us your high power problems; our applications engineering department will give you a speedy and effective response.

UNITED TECHNICAL PUBLICATIONS

DAICO INDUSTRIES, INC.

RF ASSEMBLIES

for aircraft and communications systems

coaxial switches and attenuators

SPST TO SP 36 T with hermetically sealed switching elements or solid state techniques. Logic decoders and driver. High power. Low insertion loss. High speed. Remotely controlled step attenuators to 127 db.

antenna couplers

Passive three or four pt units provide 20 db solation between dual ntenna or transceiver installations. VOR FF Glideslope. Active ntching and amplifying couplers optimize performance of ADF, Lean and VHF receivers.

custom aircraft equipment commercial - military

Monitor and display units for skid control system ECM — Receiver interface pulse blanking assembly

test / support equipment

Special depot level test equipment developed to provide rapid evaluation of complex networks. Includes pulse generators, D.C. continuity, gain and attenuation indicators.

6. Weight: 1¾ ounces nom.

CUSTOM INTEGRATED ASSEMBLIES

ISOLATOR-DUAL DIRECTIONAL COUPLERS-DUAL POWER MONITORS

Frequency Range ..... S-Band
Isolation ..... 20 db Min.
Insertion Loss ..... 0.3 db Max.
VSWR ..... 1.25 Max.
Power Monitor Diode Output ..... 1.0 VDC (Both ends of diode above ground)
Connectors:
- **Input** ..... Special plug-in
- **Output** ..... TNC female (hermetically sealed)
- **Monitor Outputs** ..... Solder terminals

Termination ..... 25 watts Max.
Body Size ..... 1 7/64 x 2 7/64 x ¾
(Magnetically Shielded)

ISOLATOR-BAND PASS FILTER-TUNABLE IMPEDANCE MATCHING SECTION

Frequency Range ..... C-Band
Isolation ..... 20 db Min.
Insertion Loss ..... 0.9 db Max. (isolator and filter)
VSWR ..... 1.25 Max.
Filter ..... 3-section comb line
Termination ..... 5 watts Max.
Connector ..... TNC female (hermetically sealed)
Body Size ..... 2⅝ x 1 7/64 x 9/16

YIG TUNED SPECTRUM ANALYZER PLUG-INS

Five models cover the entire frequency spectrum from 100 Mc to 40 Gc with greater than decade band tuning ranges. With these units, an ordinary oscilloscope is converted into a pre-selected wide band, microwave receiver which gives a panoramic display of signals on the oscilloscope The entire frequency spectrum or any segment of it, may be displayed in a single sweep.

Other units available for 561, 564 series — Contact Marketing Department

SPECTRUM DISPLAY UNIT DU-501

This portable, battery operated display unit provides panoramic viewing from 100 Mc to 40 Gc when used with the five plug-ins listed below. Price $2675.

PLUG-IN SPECIFICATIONS

TU-VL501 .10 Gc to 1.0 Gc
Price . . . . . $2,600.

TU-LX501 1.0 Gc to 12.4 Gc
Price . . . . . $2,000.

TU-VC501 .5 Gc to 5.0 Gc
Price . . . . . $2,200.

TU-LK501 1.8 Gc to 25 Gc
Price . . . . . $3,000.

TU-XK501 10 Gc to 40 Gc
Price . . . . . $3,000.

Bulletin: DU-501

YIG FILTERS

5 models cover from 100 Mc to 40 Gc with greater than decade electronic tuning ranges. Solid state, rugged compact construction.
Bulletin: YIG Filters

PANORAMIC RECEIVER R-10

Self contained YIG tuned receiver accurately tunes any selected decade band from 100 Mc to 40 Gc. Price: $3,750. Bulletin: R-10

HAND HELD SURVEY UNIT

This compact receiver utilizes a YIG tuned RF preselector and sensitive crystal video circuit to cover 1-12.4 Gc. Price $2,900. Bulletin: RLX-100

GRAPHIC RECORDER

The RC-10, electric writing recorder, provides a permanent falling raster display for RFI and spectrum signal analysis. Price $3875.

MARKER GENERATOR

MK-1
Covers 1-12.5 Gc. 100/500 Mc spacing. Self contained power supply. Price: $1,295.
Bulletin: MK-1

PARAMETRIC AMPLIFIERS

for operation in L,S,C,X,Ku Bands

E/D's broad design experience in both cryogenically cooled and room temperature low noise amplifier systems ranges from L to Ku band.

Typical Gain and Noise Figure vs Frequency

Other Models available having a variety of gain, bandwidth and noise figures.

Send for Bulletin A10/A12

SPECIFICATIONS

A-10

Frequency Response:
(10 db Gain) 20 to 1000 Mc
(18 db Gain) 50 to 850 Mc
Noise Figure: 5.0 db (Max)
Gain Compression (1 db): −10 dbm Output
Connectors 50 OHMS, 3 MM
Bias Requirements: −18V, ±1V, 20Ma
Size: 1½" Long x ½" Diameter
Weight: ¾ oz.
Price: $375.

A-12

Frequency Response:
(15 db Gain) 1000 to 2000 Mc
(10 db Gain) 700 to 2200 Mc
Noise Figure: 8 db (Max)
6 db (Typical)
Gain Compression (1 db): −6 dbm Output
Connectors: 50 OHMS, 3MM
Bias Requirements: −12V, ±1V, 20Ma
Size: ⅜" Thick x 1" Wide x 2⅝" Long
Weight: 5 oz.
Price: $750.

SOLID STATE 50 — 100 MW BWO REPLACEMENTS FOR L & S BANDS

These reliable high powered transistor oscillators are designed for direct mechanical and electrical replacement in existing BWO circuits (sweepers, spectrum analyzers).

SPECIFICATIONS

MODEL	Frequency	Power Output (Min)	Helix Voltage (Max)	Size	Price
ED-214A	1-2 Gc	100 MW	1600	3x3x11	$1,200.
ED-215A	2-4 Gc	50 MW	2000	2½x2½x9	$1,350.

Send for Bulletin ED-214A

TUNNEL DIODE DETECTORS

- **Highest sensitivity**
- **Broadband, flat response**
- **Field replaceable diodes**
- **Low price includes diodes with mount**

LOG PERIODIC ANTENNAS

Broad Band Coverage 1-12.5 Gc. Compact, Rugged, Lightweight Portable.

Measured antenna patterns show only a single main lobe with a 15 db front to back ratio over the entire 1 to 12.5 Gc band.

AN112 6¼" x 6½" x 8"

SPECIFICATIONS

- Broad bandwidth — 1 to 12.5 Gc
- High Gain — 11 db (50° beamwidth)
- Linear Polarization 20 db

- High front to back ratio in both horizontal and vertical planes — 15 db.
- Low VSWR — 2: 1 nominal with 50 ohm input.
- Connectors: Type "N" or miniature
- Price, $175 each Bulletin: AN112

Measured typical radiation pattern
Solid, vertical
Dashed, horizontal

AN112F 1¾" x 6½" x 8"

SPECIFICATIONS

- Broad bandwidth — 1 to 12.5 Gc
- High Gain — 8 db (90° bandwidth)
- Linear polarization 15 db
- Price, $175 each
- Bulletin: AN112F

CAVITY BACKED SPIRAL ANTENNAS

These compact, lightweight antennas are ideal for portable survey applications in the 30 Mc—2 Gc frequency range.

Write for Bulletin AN012-L

- **Broadband Coverage UHF Thru L-Band**
- **Circular Polarization • Lightweight**

SPECIFICATIONS

HIGH POWER RF ATTENUATOR

- Power Capacities to 5000 watts
- Variable in 1 db steps
- VSWR less than 1.25
- Input and output impedance: 50 ohms (DC to 100 MHz)

These attenuators are arranged in a T-pad configuration, switched in one db steps. Use either connector as input, with no loss of accuracy.

Usable to 500 MHz with slightly different characteristics.

SX-1-1

AUTOMATIC DIRECT READING CALORIMETERS

1% ACCURACY

TRACEABLE TO NATIONAL BUREAU OF STANDARDS!

One percent accuracy is independent of frequency and waveshape, but does not include load error. A VSWR vs. frequency chart can be furnished with your choice of any standard waveguide or coaxial load. (No extra cost on 1% models).

MODELS TO 40 GHz

WIDE VARIETY OF CONNECTORS

- Calibration resistor precisely located in coolant flow path permits calibration of Load using only a source of DC or 60 Hz power
- Quick-connect couplings on coolant connections guarantee safe, sure and convenient operation
- Specify frequency range desired when ordering
- Compact, portable
- Use with our Calorimeter Bridges or Calorimetric Power Meters
- Extremely low RF radiation
- Low VSWR guarantees most accurate termination and power transfer

Model	Frequency Range GHz	VSWR Max.	Power Rating Watts	Weight	Connector
WL-650	1.12 - 1.70	1.2	40 KW	6	UG-417/U
WL-430	1.70 - 2.60	1.2	30 KW	5	UG-435/U

- Optional equipment includes Closely Coupled Thermopiles, Output Meters reading directly in watts and Flow Meters
- Loads can be furnished with power ratings up to maximum feasible waveguide applications

BALUNS

- High efficiency Baluns permit use of 600 ohm twin line between Transmitter and Antenna
- Insertion VSWR 1.2
- Impedances are 50, 75, 200 and 600 ohms
- Insertion loss less than 0.15 db
- Maximum load (antenna) VSWR 3:1
- Ambient temperature range (typical) −40°C to +50°C
- Frequencies to 34 MHz

Frequency Sources Inc.

KENNEDY DRIVE P.O. BOX 159
NORTH CHELMSFORD, MASS. 01863
TEL (617) 251-4921 • TWX 710-343-6506

We manufacture the most adaptable line of microwave frequency sources avail anywhere. Our standard models are manufactured to meet your individual req ments. How is this possible? Because of their unusually flexible circuit designs modularized mechanical construction, our production models are designed to be tomized. This results in virtually "off-the-shelf" availability of "specials" with red delivery time and lower costs to you.

If you don't see exactly what you want listed on these pages, select the model ha the nearest frequency range, power output, method of tuning or degree of freq stability to meet your requirement. Then contact our Application Engineering De ment. Chances are, one of our standard models can be scheduled through produc to meet your exact requirements in a matter of days.

VOLTAGE TUNED — High Power

- Bandwidths up to 15%
- Extremely fast tuning rates
- Voltage/frequency curve approximately linear
- Power output to 2.0 watts
- Spurious outputs —40 dB on most models

FS-2

130A series SYNCHRONIZERS

FEL 1-40GHz CONTINUOUSLY TUNABLE SYNCHRONIZER

to phase-lock klystrons, backward-wave oscillators, solid state and triode oscillators to a crystal reference

- ultra frequency stability . . . 1 part in 10^8/second, or 1 part in 10^7/day
- continuously tunable from 1GHz to 40GHz . . . also available in shorter ranges with add-on range capabilities
- single control operation
- solid-state and completely self-contained; cabinet or rack mount
- low power consumption
- deliverable from current production

For use with an oscillator source in the research lab, on the production line, or rack mounted for tactical environments . . . to provide an extremely stable signal for microwave frequency standards, doppler systems, MTI techniques, radio astronomy receivers and parametric amplifier pumps.

WDA series DIRECT-READING WAVEMETERS

FEL WDA 940, WDA 3712 DIRECT-READING PRECISION FREQUENCY METERS

just 2 absorption type meters—instead of the usual 4 to 5—cover the full frequency range from 960MHz to 12400MHz

- WDA 940, 960-4200MHz
- WDA 3712, 3700-12400MHz
- direct readout in MHz
- special alloys and precision-ground invar threads assure smooth operation, minimum wear
- reduced cost
- superior temperature stability

For measuring cw, am, fm or pm microwave signals. Ideal for frequency measurement of microwave transmitters, microwave receivers, local oscillators and signal generators.

ANTENNA CAPABILITIES

In addition to its design, development and manufacturing capabilities, the experience and technical know-how of the FEL Antenna Group is available as a consulting service for your specific antenna design problems. The services provided include:

- Optimum selections of Antennas for System Applications.
- Computation of Antenna Radiation patterns where standard solutions are not available.
- Determination of the effects of obstacles on known free space antenna patterns.
- Experimental and theoretical evaluation of antenna performance.

HARVARD FREQUENCY ENGINEERING LABORATORIES

PRECISION MICROWAVE INSTRUMENTS AND COMPONENTS

FEL 700B 1.2-2.4GHz COHERENT MICROWAVE SYNTHESIZER

generates ultra-stable, spectrally-pure RF energy

- ultra frequency stability . . . 2 parts in 10^9/day
- simplified tuning
- frequency selection in increments of 1Hz with digitally calibrated front dials or electronic programming
- solid-state, self-contained, compact
- rear-panel jacks supply reference outputs at 100kHz, 1, 5 and 100MHz
- optional remote programming with 10 line bcd code
- 10mw output across entire range

Applications include laboratory use as a microwave frequency standard, telemetry, local oscillators for coherent radar and MTI systems, automatic and manual testing of frequency sensitive devices.

CUSTOM ENGINEERED PRODUCTS

Extensive engineering and manufacturing capabilities make Frequency Engineering Laboratories an ideal supplier of custom engineered microwave components, instruments, sub-systems or complete fixed station or tactical systems. Your inquiries are invited, for:

- airborne interdigital filters
- tunable bandpass and band reject filters
- special wavemeters with direct, micrometer or tape readout
- diplexers and multiplexers
- reference cavities, pre-selector mixers, discriminators, converters
- frequency sources, frequency monitors and custom microwave instrumentation

Specification sheets for these and all other FEL products are available by writing or calling:

NGE INSTRUMENTATION EQUIPMENT — PRECISION PEDESTALS

COMPLETE TRACKING SYSTEMS

MOBILE OPTICAL TRACKING SYSTEM

The Mobile Optical Tracking System is a precision, high load capacity, servo controlled position pedestal, mobilized for usage in rugged terrain. It can be controlled locally from the pedestal, or from its mobile control van—or a permanent site—located up to 12 miles from the pedestal.

The pedestal is controlled by infrared or TV edge track auto-track systems, or by manual joystick control. The control system features auto-override to allow momentary selection of manual mode, and a coast function allowing the pedestal to continue at the established rate for a minimum of 10 seconds should the target be lost.

Versatility is the key to the control system design. Operational switches allow the operator to select a variety of tracking modes, change system bandwidth, or introduce special functions for ease of tracking and improved accuracy.

The system requires only two hours site installation and collimation time. Two men are necessary for calibration and set-up, but normal system operation is a one-man job. Position accuracy is 2 arc seconds (static) and 0.003 mr/mr/sec (dynamic). Its angular displacement is 345° azimuth, —10° to 90° elevation. Stable tracking rates in the speed range of 5 arc sec/sec to 70 deg/sec may be obtained. Camera platforms are capable of accepting cameras weighing 500 pounds with a maximum load capacity of 1480 pounds symmetrical and balanced. Balancing of the load requires no counterweights, utilizing crank controlled weight displacement for balancing.

The flexible capabilities of MOTS allows many system variations, making it easily adaptable to the user's specific requirements.

PEDESTALS AND TRACKING EQUIPMENT

RVO CONTROLLED INSTRUMENT POSITIONER

s positioner is a rugged, lightweit unit capable of remote control, autrack, and pre-programming. Handli a symmetrical load of up to 75 lbs it utilizes dc servo control in a clod loop system.

PRECISION SERVO CONTROLLED PEDESTAL

This instrument positioning system features continuous azimuth travel with ±100° elevation, is capable of mounting symmetrical loads up to 200 pounds, and has a positioning accuracy (static) of ±.1°. Along with the solid state servo controller, the complete system can be pre-programmed, operated in a pre-position select or autotrack mode.

AZIMUTH/ELEVATION POSITIONER

The GSS Model 8175 Azimuth/Elevation Positioner is a lightweight, precision positioning unit capable of remote, manual or autotrack control. The versatile mounting arrangement permits balanced loads of up to 75 pounds with a rated velocity of 30 degrees/second and an acceleration of 30 degrees/second and an acceleration of 30°/sec². Elevation travel is —10 degrees to 190 degrees. Azimuth travel is limited by cable wrap up, or approximately ±180 degrees. Drive power is supplied by a dual-channel, complimentary transistor servo-amplifier.

XY PEDESTAL POSITIONER

The XY Pedestal positioning system is a high rigidity antenna positioner capable of maximum sky coverage including target fly-over. A unique X-shaft cam reduces "key hole" around support pillows to a minimum. Instrument loads of up to 1200 pounds can be positioned to .1° static accuracy. The tracking unit rate is 10° per second with a dynamic error of .3° maximum. The maximum acceleration is 35° per sec².

SUN SENSOR AND CONTROL

e SS-101 furnishes switch contact clores when an intense light source pa s through the field of view. The un is fully compatible with any electri ly driven sun shutter equipment an its light sensitivity threshold is ad table.

SERVO/SYNCHRO DRIVEN REMOTE AZIMUTH AND ELEVATION INDICATORS

These indicators display remote angular or linear position, or any other calibrated quantity that can be represented by shaft rotation or linear displacement.

A wide variety of dial calibrations, colors, mounting arrangements and synchro ratios can be provided.

AUTO-TRACK INTEGRATION EQUIPMENTS

These solid state units will couple an angle-error sensing device to an elevation-over-azimuth positioning pedestal to achieve a completely automatic tracking system. They also allow addition of a remote manual control (joystick) to the system, provide a provision for automatic switchover to null detector tracking, and allow retention of existing means of pedestal control.

AUTOMATIC TELEMETRY TRACKING SYSTEMS

These systems have been designed using the GSS precision servo controlled pedestal. A variety of antennae from conical scanning telemetry types to helix and cross dipole arrays can be mounted on and positioned by the servo driven pedestal. Antenna polarization can be selectable from remote control. Automatic tracking rates to 30 deg/sec are obtainable.

esign excellence and trouble-free performance are recognized attributes of th Geo Space Systems' servo positioned pedestal equipment that has been deloped and manufactured for a number of critical national test range apptions.

staff of professional design engineers and consultants and an experienced fi engineering team are maintained to offer a full range of expert services to prpective users.

MICROSTRIP 5 POLE
BAND PASS FILTERS

MODEL EF

Standard Center Frequencies	Size: (approximately, less connectors)
2.0 GHz	1/2" x 1/2" x 3 7/8"
3.0 GHz	1/2" x 1/2" x 2 7/8"
4.0 GHz	1/2" x 1/2" x 2 1/16"
5.0 GHz	1/2" x 1/2" x 1 7/8"
6.0 GHz	1/2" x 1/2" x 1 5/8"
7.0 GHz	1/2" x 1/2" x 9/16"
8.0 GHz	1/2" x 1/2" x 1 7/16"
9.0 GHz	1/2" x 1/2" x 1 3/8"

TYPICAL 4 GHz FILTER

Price: $148.00 each / 100 pieces, $88.00 each
Special center frequencies (2 to 9 GHz range), not listed, $195.00 each

- Typical bandwidth (3 dB points) 10%
- Insertion loss (pass band) 2 to 4 dB, (3 dB nominal)
- Typical attenuation: 40 dB down at center frequency ± 17 %.
- Mounting: Filter may be clamped in place or mounted using two 4-40 threaded inserts supplied on the under side.

When Ordering: Specify Model EF filter and center frequency desired.

NOTE: Attenuation out of the pass band will generally be below 60 dB except for the 2nd harmonic frequency of the pass band. The design characteristics of a microstrip filter using 1/2 λ resonators, in such that the resonators will respond to 2 times the output frequency. This allows 2nd harmonic frequency responses to pass with as high as -12 dBm below the input. We, therefor, recommend this filter in applications where heavy 2nd harmonic attenuation is not required.

MICROWAVE ACCESSORIES

MICROSTRIP HYBRID RING

MODEL ER-100

Specify frequency desired between 1 GHz and 9.6 GHz

- 3 dB power split
- ± 90° relative phase
- 10% bandwidth
- 50 ohms
- OSM style connectors

Price: $145.00

MICROSTRIP COUPLER

MODEL EC-100

- 3 dB, 90° Octave band
- Coupling is 3 ± .5 dB
- Isolation 20dB typical
- VSWR, less than 1.4

Specify frequencies
F1 1.5 GHz to 3.0 GHz
F2 .75 GHz to 1.5 GHz
F3 1.0 GHz to 2.0 GHz

Price: $125.00 each

Stripline coaxial
DIRECTIONAL COUPLERS

MODEL EDC-100

Specify frequency range
F1 .5 to 1.0 GHz
F2 1.0 to 2.0 GHz
F3 2.0 to 4.0 GHz
F4 4.0 to 8.0 GHz

- 10 dB coupling value
- 20 dB minimum directivity
- VSWR less than 1.30
- ±.7 dB coupling flatness
- OSM style connectors

Price: $155.00 each

Greenray Industries, Inc.

840 West Church Road, Mechanicsburg, Pa. Phone — (Area Code 717) 766-0223

MICROWAVE FREQUENCY SOURCES

CRYSTAL CONTROLLED (±.00075%)

UP TO 10 GHz

5 milliwatts
or
00 milliwatts

VERY LOW NOISE:

- Achieved by using straight multiplication.
- Only one step recovery diode is used (on units with output frequency above 1 GHz.)
- Noise producing phase locking is not used.

MICROWAVE OSCILLATOR SPECIFICATIONS

- Fixed frequency output: Manufactured to your exact requirements.
- Stability: ± .00075% over temperature range.
- Temperature range: 0 to 50°C.
- Power Output: 100 mW minimum, or, 5 mW as specified.
- Spurious levels (non-harmonically related): 60 dB down.
- Harmonics and sub-harmonics: 26 dB down minimum.
- Input: 28V dc regulated, ± 1 V.
- FM jitter: Less than ± 2 x 10^{-9}/10 milliseconds.
- Output connectors: OSM style.
- All units have mechanical frequency adjustment for aging.

MODEL	FREQUENCY RANGE	OUTPUT	SIZE (L. W. H.)	PRICE
EY-101	1 MHz to 125 MHz	100 mW	1 1/2" x 3 3/8" x 1 1/2"	$ 675.00
EY-102	125. 01 MHz to 500 MHz	100 mW	3" x 3 3/8" x 1 1/2"	990.00
EY-103	500. 01 MHz to 1 GHz	100 mW	4 1/2" x 3 3/8" x 1 1/2"	1200.00

TWT AMPLIFIERS

3 FOR THE SPACE OF 1

KELTEC'S NEW TWT AMPS SAVE SPACE AND WEIGHT

- Designed for portable, rack or bench-mount operation
- Plug-in solid state, modular construction
- Frequency coverage 1.0 to 18.0 GH_Z in standard frequency bands
- Power output of 1, 2, 10 or 20 watt CW
- 100 and 200 watt units available in 19" rack
- As an option, the Keltec R-600 series can be provided with logic circuitry to facilitate remote operation

LORCH COMMUNICATION EQUIPMENT AND ACCESSORIES • RF COMPONENTS

WIDE DYNAMIC RANGE RECEIVER
Model HR-240 - 2 to 32 MHz

A sensitive, wide dynamic range receiver with locally or remotely contro all-electronic tuning. All front panel knobs and switches, including frequ tuning may be controlled locally or by remote program.

Frequency Range .....2 to 32
Tuning Time .....5.0 millisec
Dynamic Range .....over 10
Spurious Response Rejection (including Image and IF) .....over 10
Sensitivity (3 KHz Bandwidth) .....−133
Gain Variation vs. Frequency (2 to 32 MHz) .....±1
Reception Modes .....AM, USB, LSB, and
Size .....17″ W x 21″ D x 5¼

DOUBLE BALANCED FET MIXER
Model FC-351

A double balanced FET mixer with extremely low intermodulation distortion, high power handling capability and excellent isolation between all ports.

Frequency Range, all ports .....0.2 to 100 MHz
Conversion Loss and Noise Figure .....9 db max.
Two Tone Intermodulation Ratio (3rd and 5th Order)
Two RF tones, each 0 dbm .....80 db
Compression Level (2 db compression) .....+30 dbm
Dynamic Range .....155 db
Isolation .....To 50 db
DC Power Required .....None

WIDE BAND DOUBLE BALANCED MIXERS

Low intermodulation and spurious products

Frequency Range .....From 10 KHz to 12.4 GHz
Conversion Loss .....As low as 5 db
Isolation .....To 85 db
Two Tone Intermodulation Ratio, Third Order
Two tones, −30 dbm .....To 130 db
Dynamic Range .....To 145 db
Temperature Range .....−65°C to +125°C
Hermetically Sealed
Standard Pin Packages, TO-5 Can, Connector Versions, Custom Packaging, High power versions of mixers and product detectors available on special order.

WIDE BAND ELECTRONIC SWITCHES

RF Frequency Range .....1 to 200 MHz
Switching Frequency Range .....DC to 50 MHz
RF Input Level for 2 db Compression .....To +23 dbm
Insertion Loss, ON Condition .....To 1 db
Insertion Loss, OFF Condition .....To 70 db
Temperature Range .....−65°C to +125°C
Hermetically Sealed
Standard Pin Packages, Connector Versions, Custom Packaging

WIDE BAND HYBRID JUNCTIONS and POWER SPLITTERS
2, 3, 4, 5, 6, 8 and MULTIWAY

Frequency Ranges .....From 10 KHz to 400
VSWR 1.2
Isolation .....To 3
Phase Balance .....
Amplitude Balance 0.1
Temperature Range .....−65°C to +12
Input Power .....To 50 w
Hermetically Sealed
TO-5 Can, Standard Pin Packages, Connector Versions, Custom Packa

MICROWAVE FILTERS

Low Pass Filters.....From 100 KHz to 12.0 GHz (Low power and power).
Band Pass Filters.....From 10% to octave bandwidth. Frequencies 100 KHz to 8.0 GHz.
Preselectors .....Tuning range 15% (nominal). 3 db bandwidth: 0.5% to 1.2%. Fixed tuned, individually tu or gang tuned. From 800 MHz to 6.0 GHz.
Diplexers .....From 0.5% to 1.2% (3 db bandwidth), fixed tu Frequencies from 100 KHz to 6.0 GHz.

WIDE BAND RF AMPLIFIERS, SERIES AM-320

Frequency Range .....0.1 to 500
Noise Figure .....To
Power Output for 3 db Compression .....To +30
Third Order Intercept .....To +45
Temperature Range .....−20 to +

Normally available as connector versions, these high perform amplifiers may be ordered as hermetically sealed pin packages.

MICROWAVE from MICRO-NOW

MICROWAVE INSTRUMENTATION FOR SCIENCE AND INDUSTRY

ILLIMETER WAVE SWEEPER
.5-40; 40-60; 60-90 GHz

MODEL 702C (FULL RANGE SWEEP) WITH MODEL 724 HEAD

lectronic sweeping of the ll oscillator tube tuning nge (as wide as 30 GHz) i featured in the Model 2 Millimeter-wave sweep stem. Also available thout sweep or with narw band (up to 3 GHz) eep only. Prices (witht sweep, less oscillator ad) start at $3400.

abilizing and leveling ailable.

TYPICAL PERFORMANCE

Model	Range	Power out	Price (head only)
722	26-42 GHz	60 mW	$4295
723	39-62 GHz	20 mW	5075
724	55-94 GHz	5 mW	5625

Other Sweepers: Standard and custom built instruments and systems, 1 GHz and up.

YSTEMS

stom designed microave instrumentation sysms are a specialty of icro-Now Instrument ompany. Programmed ultiple sources such as e one illustrated here e representative of icro-Now's capabilities the microwave specialty ea.

ll or write for a quotan on your needs.

PECTROMETERS
SR, EMR

Model 810

icrowave spectrometers for electron-spin resonance and ectromagnetic resonance studies. Both standard and ecial-purpose models are available.

Model 801A (L Band): $4,850
Model 810 (X Band): $1,900

icro-Now has developed and delivered a number of ecial-purpose microwave spectrometers for such applitions as dielectric constant analysis. Consult us regardg your specific requirements.

STABILIZERS

Model 202

Phase-Locked: Model 202 general purpose stabilizer for locking klystron oscillator to stable reference signal or second klystron. Also available with additional AM detector (Model 202B) or for use with BWO tubes (Model 202C).
Price: from $875

Stabilizer-Reference: Combination of phase-lock stabilizer (model 202, above) and tunable crystal-controlled source (Model 101C, below) to provide Model 203 single-unit stabilizer usable to over 25 GHz (to over 40 GHz with accessory Model 301).
Price: $1500

Model 203

Cavity-Referenced: Two stabilizers combined as Model 204 superhet system to permit phase-locking klystron oscillator to reference cavity. Uses Model 202 (above) plus Model 205 and waveguide components (not provided).
Price (Model 205 only): $650

REFERENCE MULTIPLIERS

Model 101C

Precision oven stabilized 5 MHz crystal oscillator with harmonic amplifier, for use as stable microwave reference signal to to over 25 GHz. Available fixed frequency (Model 101B), manually tunable (Model 101C), or sweep motor tuned (Model 101D).
Price: from $525

POWER SUPPLIES

Model 753

Micro-Now manufactures a variety of special power supplies specifically designed to power microwave oscillator tubes. Included are supplies for klystrons, backward-wave oscillators, and voltage-tunable magnetrons.

MIXERS

Model 602

Harmonic generating mixers for use with stabilizers and other microwave systems. Frequency ranges from 1-40 GHz.
Prices: from $200

HIGH POWER, RF TETRODE PULSE, CW CAVITIES

Up to 250 KW Output (Pulse Service)

- Tunable from 40-1350 MHz
- Input VSWR, 2:1 or better.
- Gang tuning available.
- Input and output coupling matched over entire range on most units.
- No neutralizing.
- Servo tuned models available.*
- Temperature stable.
- Optimum cooling.
- MIL Spec design.

BROAD BAND AMPLIFIER CAVITIE

Give maximum utilization of the gain-bandwidth product, VHF through S-Band. Bandwidths more than double those of ordinary cavities. Flat-top response for easy cascading, with minimum reduction in overall system bandwidth. Eliminate mechanical tuning in many uses. Excellent phase stability, linearity. Compact.

8051	500-1000	1.5			

SERIES 10299B HIGH POWER PULSE MODULATOR

Designed as companion modulators to Series "E" pulsed oscillators.

- **Available in three standard, adjustable output voltage ranges:** 0-1.5 KV@ 6.0amperes, peak; 0-3.0 KV @ 3.0 amperes, peak; and 0-6.0 KV @ 1.5 amperes, peak. Peak voltage readout accurate to 2.0% of full scale, from 100 pulses per second up. (Other voltages and currents at average power levels to 100 watts, available on special order.)
- **Pulse characteristics:** repetition rate: 100 Hz to 10 kHz. Width, variable, 0.5 to 10 microseconds. Rise and fall time: as low as 200 nanoseconds into resistive load.
- **Duty cycle:** .001 to .01 with 2.0% readout accuracy. Overload cut-off, adjustable over same range.

Price	$250.

PULSED SIGNAL SOURCES and KLYSTRON POWER SUPPLIES

Model 18500B— High Power Pulse Signal Sources from 200 to 9500 MHz with 5 KW output with 11 interchangeable RF heads. Get continuously variable peak power, repetition rates and pulse widths. External pulse capability. $3660.–$6360.

Model 62A1A — Universal Klystron Power Su features automatic switching of meter scale the beam voltage is advanced for continuo variable beam from 200 to 4000 volts. Pre regulation of 0.01%. Maximum ripple of 3 $1995.

ATTENUATION CALIBRATION

VSWR Amplifier Model 441F is qualified to meet MIL-I-38702. Sensitivity — 0.1 μV for full scale deflection. Recorder output for full scale deflection — 1ma into 1500 ohms. Digital indication in 2 db steps, up to 70 db. Temperature compensated from 0° to +55°C for accuracy. $450.

Model 61A1B — Attenuation Calibrator is c ble of highly accurate measurements over frequency range of 10 MHz to 40 GHz. Featu 100 db single-step attenuation measureme built-in noise generator; power and attenua measurements to below —117 DBM; preci and resolution better than 0.05 db. $2825

MICROWAVE SPECTRUM ANALYZERS 10 MHz-90 GHz

The Model SA 2650 Microwave Spectrum Analyzer employs new design concepts which provide increased performance and reliability. This Broadband Spectrum Analyzer utilizes both RF and IF sweep techniques to provide narrowband stability and resolution with wide image free frequency spans. A solid state swept first local oscillator is employed for wide dispersions up Hz. For frequency spans of 3 MHz or less, a stabilized cavity first wh very low residual FM provides repeatable displays for stable high on measurements. The unique design enables the user to obtain s free displays through X-Band without the use of costly pre- rs or filters. Frequency tuning, dispersion, IF Bandwidth, sweep and CRT scales are all directly calibrated. RF and IF frequency s self check the frequency and dispersion calibrations for more e measurements. The CRT Log presentation is calibrated over a 7 db dynamic range. Other convenience features: automatic opti- and adjustable resolution, simplified foolproof signal identi- .

SA-2650 SALIENT SPECIFICATIONS

Frequency Range: 10 MHz to 90 GHz in 12 Bands.
Sensitivity: −100 dbm to −40 dbm depending upon frequency band (S+N=2N @ 10 KHz BS).
Dispersion: 0 to 2 GHz calibrated and adjustable.
Resolution: 1 KHz to 1 MHz calibrated steps, completely adjustable from 1 KHz to 100 KHz with Automatic Optimized Resolution provided.
Sweep Speed: 0.003 to 1 Sec/div., calibrated and variable.
Vertical Display: 70 DB Log, Linear, Power.
Frequency Markers: RF Markers: Accuracy ±0.01%, every 100 MHz self-checks frequency scale calibration. IF Markers: Center Frequency and internal marker modulation every 100 KHz or 1 MHz, plus external modulation.
Multiple Responses: No in-band multiple responses at 0-2 GHz frequency spans from 0.01 to 12.4 GHz.
Mixer Selection: Internal mixer covers range from 10 MHz to 12.4 GHz. External Mixers may be used on any band. Selected by front panel switch. Optional waveguide mixer and transition accessories available from 8.2 to 90 GHz:

X9060 Mixer 8.2-12.4 GHz	$ 75.00
K9070 Mixer 12.4-40 GHz	$160.00
K9071 Transition 12.4-18 GHz	$ 65.00
K9072 Transition 18-26 GHz	$ 65.00
K9073 Transition 26-40 GHz	$ 65.00
Q9081 Mixer 40-90 GHz	
Q9081 Transition	$625.00

CRT Display: Calibrated 8 x 10 cm, scale illumination, Camera Mount.
Dimensions: 14" H x 16¾" W x 23" D.
SA-2650 Price: $8500.00

MICROWAVE RECEIVERS & FIELD INTENSITY METERS 0.95-21.0 GHz

The Model TR Microwave Receiver is a triple conversion superheterodyne receiver. Six plug in tuning units cover the frequency range from 0.95 to 21 GHz and include preselectors for rejection of unwanted responses. The receiver functions equally well as an AM-FM receiver, a field intensity meter, a pulse, pulsetime or pulse position demodulator or as a sensitive microwave power meter. Operates on 115/230 Volt 50-60 Hz or 12 Volt battery.

DESCRIPTION	FREQUENCY (GHz)	PRICE
Basic Unit and Power Supply		$4,120.00
Tuning Unit (Plug-In)	0.95— 2.04	$2,940.00
Tuning Unit (Plug-In)	1.9 — 4.34	$2,940.00
Tuning Unit (Plug-In)	4.2 — 7.74	$2,940.00
Tuning Unit (Plug-In)	7.3 —11.26	$2,940.00
Tuning Unit (Plug-In)	9.85—15.35	$3,480.00
Tuning Unit (Plug-In)	14.75—21.0	$3,580.00
Tuning Unit (Plug-In)	2.0 —75.0	$2,940.00

The Model CFI Field Intensity Meter combines a microwave receiver, impulse calibrator and calibrated antenna system for RI/I measurements per MIL-I-11748B, MIL-E-6051C, MIL-STD-449A and category A of MIL-I-618-1D and MIL-I-26600. Provides accurate measurements of absolute power level of conducted or radiated microwave energy. Six plug in tuning units cover frequency range from 1 to 21 GHz. Choice of battery or 115/230V line power operation.

MODEL	DESCRIPTION	FREQUENCY (GHz)	PRICE
T-CB	Basic Unit & Calibrator		$6,000.00
CFI-L	Tuning Unit (Plug-In)	1.0 — 2.04	$2,940.00

MICROWAVE SIGNAL GENERATORS & SOURCES 0.95-21 GHz

Polarad's 12 Microwave Signal Generating Instruments Provi High Performance Without Costly Duplication

The 12 instruments comprising the Polarad broadband line of modular signal-generating equipment offer practical combinations for producing every type of signal required in modern microwave development and testing between 0.95 and 21 GHz. They feature:

FLEXIBILITY — Use Polarad broadband instrument modules individually or in combination to obtain the desired signal characteristics. Select only the functions required by each application — add functions only when needed — avoid costly duplication. Patented reversible handles permit rack mounting or easy handling and stacking on the bench. A stacking lock fits the instruments together.

COMPACTNESS — All modules are of one standard size; measure only 5¼ inches high, 16¾ inches wide (19 inches with reversed handles for rack mounting) and 17 inches deep.

HIGH FREQUENCY ACCURACY — Frequency indication is accurate to ±0.5%.

DIGITAL FREQUENCY READOUT — Frequency setting is displayed on an easy-to-read digital indicator; turned by the UNIDIAL® one-knob tuning control.

HIGH POWER OUTPUT — Signal sources provide up to 50 mw; signal generators up to 15 mw. Doublers range from 0 to −100 dbm calibrated.

HIGH ATTENUATOR ACCURACY — Fully calibrated attenuator to −127 dbm over full frequency range.

STABILITY — Frequency and power-stability are representative of the highest state of the art.

FULL MODULATION CAPABILITY — Polarad's modular line offers maximum versatility for all test applications through a wide range of internal and external pulse, square wave and FM modulation.

PHASE LOCK — A frequency stabilizer module permits locking of frequency to crystal stability. Phase lock capability is built into all Polarad modular signal instruments.

LOW PRICE — You save by paying for high quality and flexibility, without duplication of functions.

0.95 to 2.4 GHz

Frequency Stabilizer Model 38
1.0 to 12.4 GHz

Use Polarad modular instruments individually or in combination to obtain any required microwave signal

Polarad Modular Signal Instruments Condensed Specifications

All models supplied with rack mounting capability and 115/230 V, 50-60 Hz operation at no extra cost.
For 50 to 400 Hz power line operation add F suffix to model number and $175.00 to price of unit.

MODEL	MODULE	DESCRIPTION	FREQUENCY	PRICE*	CHARACTERISTICS
100		Modulator		$ 745.00	Supplies squarewave, pulse and sawtooth FM modulation for signal generators and sources.
1105		Signal Generator, L Band	0.95— 2.4GHz	2090.00	0 to —130 dbm calibrated power output.
1106		Signal Generator, S Band	1.95— 4.6GHz	2090.00	+3 to —127 dbm calibrated, 15 mw 1.95 to 4.6 GHz, 30 mw 2.3 to 4.2 GHz.
1107		Signal Generator, C Band	3.8 — 8.2GHz	2090.00	+3 dbm to —127 dbm calibrated power output, 5 mw min. power output. 10 mw power output over entire frequency range optionally available. Add H suffix to model number and $100.00.
1108		Signal Generator, X Band	6.95—11.0GHz	2090.00	
1205		Signal Source, L Band	0.95— 2.4GHz	1590.00	50 mw minimum power output.
1206		Signal Source, S Band	1.95— 4.2GHz	1590.00	
1207		Signal Source, C Band	3.8 — 8.2GHz	1840.00	18 mw average power output.
1208		Signal Source, X Band	6.95—11.0GHz	1840.00	
1509		Frequency Doubler	10.0 —15.5GHz	1685.00	0 to —100 dbm calibrated power output. Doubles input frequency from signal source.
1510		Frequency Doubler	15.0 —21.0GHz	1685.00	
1105	1001	Signal Generator, L Band with Full Modulation Capabilities	0.95— 2.4GHz	2330.00	0 to —130 dbm calibrated power output.
1106	1001	Signal Generator, S Band with Full Modulation Capabilities	1.95— 4.6GHz	2330.00	+3 to —127 dbm calibrated, 15 mw 1.95 to 4.6 GHz, 30 mw 2.3 to 4.2 GHz.
1107	1001	Signal Generator, C Band with Full Modulation Capabilities	3.8 — 8.2GHz	2330.00	+3 to —127 dbm calibrated power output, 5 mw min. power output. 10 mw power output over entire frequency range optionally available. Add H suffix to model number and $100.00.
1108	1001	Signal Generator, X Band with Full Modulation Capabilities	6.95—11.0GHz	2330.00	
1509	1207	Signal Generator, Ks Band	10.0 —15.5GHz	3525.00	—3 to —100 dbm calibrated power output. 0 dbm (1 mw) calibrated power output optionally available. Add H suffix to model number and $100.00.
1510	1208	Signal Generator, Ku Band	15.0 —21.0GHz	3525.00	
1509	1207 1001	Signal Generator, Ks Band with Full Modulation Capabilities	10.0 —15.5GHz	3765.00	—3 to —100 dbm calibrated power output. Internal or external pulse, CW, FM or square wave modulation. 0 dbm (1 mw) calibrated power output optionally available. Add H suffix to model number and $100.00.
1510	1208 1001	Signal Generator, Ku Band with Full Modulation Capabilities	15.0 —21.0GHz	3765.00	
1301		Frequency Stabilizer	1—12.4GHz	Contact Factory	Continuous phase lock with crystal stability, proportional oven controlled. Can be used separately to lock any voltage tuneable device from 1 to 12.4GHz.

Polarad signal instruments also offer...

knob UNIDIAL tuning control provides frequency indication in easy-to-read digital form. Knob simultaneously tracks the oscillator and display to provide frequency accuracy of ±0.5%.

Simply remove and reverse the handles on Polarad Modular instruments to convert them to rack mounting. For bench use the units can be easily stacked one above the other.

Programmable motor drive can be accommodated on any Polarad Generator or Source by means of a rear tuning shaft extension.

PLUG-IN SPECTRUM ANALYZERS 0.5 Hz to 6.5 GHz

NR provides an unequalled array of plug-in spectrum analyzers for virtually every application from sub-audio through microwave frequency ranges. Each instrument is carefully designed and fully tested to provide optimum performance and versatility, at minimum cost.

NR plug-in spectrum analyzers are available for use with the Tektronix® "letter" and 560 series, and the Hewlett-Packard 140A/141A series oscilloscopes. The NR plug-ins convert these widely used scopes into easily used, calibrated spectrum analyzers. Their exceptional specifications, ease of use, self-checking, and high calibration accuracies are normally associated with spectrum analyzers costing several times as much.

Nelson-Ross instruments are well-known for quality and reliability. Each carries a full one-year warranty. Thousands of NR instruments are in successful use throughout the world.

PSA-016

PSA-021

PSA-235

LOW FREQUENCY SERIES

All the analyzers in this series have calibrated center frequency and dispersion (frequency scan width) dials; full band dispersion; high sensitivity and stability; low distortion; 1 megohm input impedance; calibrated input attenuator and scale expander; low noise and incidental FM levels; video (noise smoothing) filter; recorder outputs; and a wide range of scan rates (manual and single scan also provided on some models).

Typically, these analyzers are employed in the measurement of frequency, bandwidth, spectral distribution, frequency response, energy distribution, power levels, intermodulation and harmonic distortion of both simple and complex signals.

Also refer to the extremely versatile 1 kHz-25 MHz spectrum analyzers, in the high frequency series.

ACCESSORIES FOR LOW FREQUENCY SERIES

SYNCHRO-SWEEP GENERATORS

FREQUENCY RESPONSE PLOTTERS

10 Hz — 500 kHz

NR synchro sweep generators, companion instruments to the low f quency series spectrum analyzers, are signal sources tracked to t same frequency as the analyzer. The SSG is used in filter and amplif design to plot frequency response, insertion loss, etc., in vibration ana sis as an excitation source and in other similar applications. Dynar range is virtually unlimited.

HIGH FREQUENCY SERIES

The NR high-frequency spectrum analyzers provide unequalled capability for rapid broadband scanning, as well as highly resolved, narrow-band analysis; at lowest cost.

The narrow-band analyzers are well suited for signal analysis of SSB, AM, FM, and data communications. They have such essential features as 60 db dynamic range for distortion measurements, 60 db log amplitude scale, simplified operation and automatically optimized resolution. Some models include self-checking crystal controlled frequency markers.

The all solid-state wideband analyzers provide dispersions up to 1 GHz stable narrow scans, usable 60 db display range, high and uniform sensitivity, and automatically optimized resolution. In some models, highly stable phase locked narrow band scans are provided.

Typically, these analyzers are employed for pulsed and CW signal analysis, telemetry and multiplexed carrier monitoring, frequency response studies, spectrum signature and surveillance; harmonic and spurious analysis.

ACCESSORIES FOR HIGH FREQUENCY SERIES

TWO-TONE GENERATORS 100 Hz — 10 kHz

	TTG	TTG/F
CY RANGE:	100 Hz to 10 kHz Adjustable in 1% steps	100 Hz to 10 kHz Preset at factory
CY ACCURACY:	±2%	±1%

CY STABILITY: ±0.1%/hr after initial warmup;
LEVEL: each tone set at 0 dbm (600 ohms), on panel meter;
ATTENUATOR: 63 db range in 1 db steps; ±0.1 db/db;
OWER: 115/230V; 50-60 Hz.

	$900	$600

NR audio two-tone signal generators are distortion-free one and two-tone modulation sources for transmitter testing, frequency response and distortion measurements. Outputs are precisely adjustable and stable. Unwanted outputs are >60 db down from each tone level.

Electro-mechanical & Microwave Products
FROM

PREMIER MICROWAVE CORPORATION

Combining the manufacturing and design capabilities with extensive knowledge of microwave circuitry, waveguide systems, computer-peripheral equipment, and electro-mechanical, sub-assemblies, has become the specialty of Premier Microwave Corp. Whether we manufacture custom parts to the customers' exact drawings or our own engineering department works to overall specifications, our unique capacity assures fastest possible delivery of finished pieces. In addition, our fast growing line of standard products now includes microwave circulators, isolators, (Gombos) filters, wave meters, and similar fully-developed microwave products for which tooling already exists.

X-BAND ISOLATOR

Includes permanent magnet and offers excellent transmission with high powers to 250 Kw peak, 250 w cw, at 20 db isolation. VSWR is less than 1.20:1. 4½″ long. Many standard and custom units available.

FERRITE WAVEGUIDE CIRCULATOR

Unique non-reciprocal electrical properties of ferrite materials used in the circulator permit one antenna to be used for both transmission and reception. Premier offers an extensive line of circulators for microwave applications.

TUNABLE FILTER
(GOMBOS)

Direct-reading waveguide unit with fins and mounting brackets. Note long shaft, spiral dial design and large indicator card.

DIRECT TAPE READOUT FILTER
(GOMBOS)

Less than 1 db insertion loss, 4400 to 5000 MHz tuning range with 2MHz calibration accuracy. Other units available from 1 to 12 GHz.

COMPUTER COIL
(PORTCHESTER)

Magnetic reluctance devices such as solenoids require the small, flat packaging design used here for close, space-starved installations. Portchester Instrument Corp. of California has designed and built their own unique counter-rotating coil winder enabling high production rates plus excellent quality in a small size.

INTERPOSER
(PORTCHESTER)

Typical of the tightly-wound and quality encapsulated electro-mechanical components used in computer peripheral equipment.

For engineering excellence in electronic products:

PMC **Premier Microwave Corporation**

RHG SPECIALIZED MICROWAVE RELAY LINKS

▪ *FOR HIGH SPEED VIDEO DATA* ▪ *FOR REAL TIME SURVEILLANCE*

AIR TO AIR
(L, S, C, X Bands)

- **Very Wideband**
- **Meets MIL-E-5400**
- **RFI Protected**
- **200 nautical mile range**

Used by the Air Force for transmission and reception of 945 line TV signals, this equipment provides the rugged reliability required in airborne environments. Packaged in standard ATR configuration, this system provides operation on 3 RF channels, switch selectable on receiver and transmitter.

GROUND STATIONS
(2 thru 13 GHz)

- **Portable or Fixed installations**
- **Rugged—weatherproof**
- **Built-in subcarriers**
- **Meets EIA, CCIR and FCC STDS**

In use by many military and industrial customers. These units offer flexibility and economy. Built-in audio or narrowband telemetry subcarriers are multiplexed with a wideband video channel. The rugged weatherproof portable gear can be readily assembled and/or disassembled by one man in the field. The rack equipment offers full accessibility via readily removable front panels.

RHG manufactures highly sophisticated Microwave Relay Links for military applications and has a listing of "standard" models in its catalog. Additionally, "specials" designed and built to customer specifications account for a major part of the work done in this area.

RHG can draw on an extensive library of designs and use previously developed building blocks to meet your specific requirements. Many RHG links have been delivered to the U.S. Army, Navy and Air For are presently operational on aircraft, missiles, and ships.

A few of these "special" and "standard" models are illustrated plete details are listed in Catalog 70B. Call or write for te information or catalog.

SPECIALIZED MICROWAVE RELAY LINKS

RHG

▪ *FOR RADAR REMOTES* ▪ *FOR HIGH RESOLUTION TV*

POINT TO POINT
(C Band)

- **High Shock Environment**
- **Low Intermodulation**
- **High Signal to Noise**
- **Diplexed Operation**

In use by the AEC for telemetry of sensor data. These links must withstand high shock environment and provide ultra reliable performance. Multi-mode operation provides super fast transient response with carrier offset in one mode, and conventional TV transmission as a switch selectable alternate.

AIR TO GROUND
(9 GHz)

- **1000 Line Resolution**
- **Missile Grade Transmitter**
- **AFC Frequency Control**
- **Switchable Receiver Bandwidths**

In use by the Air Force as a multipurpose link suitable for transmission of wide band signals with video basebands up to 20 MHz. Transmitter designed and tested for high shock and vibration airborne environment. Receiver bandwidths are switch-selectable for optimization of signal to noise.

MINI-LINK SERIES

• <75 cubic inches • 5 lbs.

The "MLT" miniature series is designed for those applications requiring a compact module, which incorporates only the essential elements and features without sacrifice of performance.

"MLT" WIDEBAND MODELS

Model No.	(in band of) Frequency GHz	Baseband	Output Power (watts)
MLT1.7	1.71 to 1.85	10 Hz to 6.0 MHz ±0.5 db <1% tilt on 50 Hz square wave	4.0
MLT2.2	2.2 to 2.3		2.0
MLT3.7	3.7 to 4.2		1.0
MLT4.4	4.4 to 5.0		0.75
MLT5.9	5.9 to 6.5		0.50
MLT7.1	7.1 to 8.4		0.30

"MLTW" VERY WIDEBAND MODELS

MLTW1.7	1.71 to 1.85	10 Hz to 12 MHz ±1.0 db <1% tilt on 50 Hz square wave	4.0
MLTW2.2	2.2 to 2.3		2.0
MLTW3.7	3.7 to 4.2		1.0
MLTW4.4	4.4 to 5.0		0.75
MLTW5.9	5.9 to 6.5		0.50
MLTW7.1	7.1 to 8.4		0.30

NOTES:

1. Power: +24 VDC @ 1.5 A (typical)
2. Size: 17" x 4½" x 2¼" (nominal)
3. Weight: 5 lbs. (approx.)

19" RACK MOUNTED

The "FMT" series is designed for standard 19" rack mounting. This unit is completely self contained, all solid state, and fully RFI protected.

"FMT" WIDEBAND MODELS

Model No.	In Band of (GHz	Baseband	Output Power (watts)
FMT1.7	1.71 to 1.85	±0.5 db 10 Hz to 6 MHz <1% tilt on 50 Hz square wave	4.0
FMT2.2	2.2 to 2.3		2.0
FMT3.7	3.7 to 4.2		1.0
FMT4.4	4.4 to 5.0		0.75
FMT5.9	5.9 to 6.5		0.5
FMT7.1	7.1 to 8.4		0.5
FMT1.7HP	1.71 to 1.85		20
FMT2.2HP	2.2 to 2.3		20
FMT3.7HP	3.7 to 4.2		20
FMT4.4HP	4.4 to 5.0		20
FMT5.9HP	5.9 to 6.5		20
FMT7.1HP	7.1 to 8.4		20

"FMTW" VERY WIDEBAND MODELS

FMTW1.7	1.71 to 1.85	±1.0 db 10 Hz to 12 MHz <1% tilt on 50 Hz square wave	4.0
FMTW2.2	2.2 to 2.3		2.0
FMTW3.7	3.7 to 4.2		1.0
FMTW4.0	4.4 to 5.0		0.75
FMTW5.9	5.9 to 6.5		0.5
FMTW7.1	7.1 to 8.4		0.5
FMTW1.7HP	1.71 to 1.85		20
FMTW2.2HP	2.2 to 2.3		20
FMTW3.7HP	3.7 to 4.2		20
FMTW4.4HP	4.4 to 5.0		20
FMTW5.9HP	5.9 to 6.5		20
FMTW7.1HP	7.1 to 8.4		20

NOTES:

1. All models listed above are available in "ATR" configuration. Add suffix "ATR" to model number shown. Packaging is B1D1 size to mate with shock mount tray M591405-B1D1 (not supplied). These units require 115 V 400 Hz power. Other power options available.
2. Std. units require 115 V 60 Hz.

"ATR" STYLE—AIRBORNE

The "FMT-ATR" series is designed for airborne applications, and offers electrical performance identical to the regular "FMT" series.

ADDITIONAL INFORMATION

1. Deviation: Wideband models ±4 MHz; Very wideband models ±8 MHz
2. Video levels: Rated deviation produced by 0.7 to 1.4 V p-p (adjustable)
3. Output load: All models designed for 50Ω load. "FMT" and "FMTW" models incorporate terminated 3 port circulator, protecting against open, shorted, and poor VSWR loads
4. Stability: ±0.5% from −20 to +55°C. (all models.) Up to ±.003% with AFC option
5. RFI: All models incorporate RFI protection
6. Fidelity: Typical linearity <5% over full deviation; <2% over 50% deviation. Complete fidelity data related to intended usage available on request

AVAILABLE OPTIONS

1. Deviations: Up to ±24 MHz
2. Video: Up to 24 MHz
3. Power: Up to 100 watts
4. Frequency: 0.5 to 13 GHz
5. Selectable Frequency: Models with step or continuous tuning available
6. Pre-emphasis: Standard or special networks are available
7. Subcarriers: Standards at 6.5, 7.5 and 8.5 Specials up to 20 MHz
8. AFC: Stabilities to ±.002% available
9. Multiplex: Complete multiplex facilities for TV, Telemetry, Telephony are available

DDITIONAL SPECIFICATIONS:

. Noise Figure: 9 db (typ.) all units plus preselector loss, if applicable.
. RF Isolator: Standard on all units.
. AGC: 45 db (min.)
. Video Baseband: ±0.5 db over 10 Hz to 6 MHz (12 MHz, ±1.0 db) on wideband models with <1% tilt on a 50 Hz square wave.
. Video Output: 2 supplied at 75Ω impedance level. (1.4 V-P-P).

TANDARD MODIFICATIONS

. De-emphasis: Standard CCIR plug-in networks are available.
. Power Input: Units designed for 12, 24 or 28 VDC are available.
. Diversity Operation: Manual and automatic diversity operation can be supplied with post detection combining.
. Subcarrier Demodulators: Available to meet customer needs.

The photos on this page show three packaging options available for the FMR series. They are available in L, S, C or X-band and have low thermal and intermodulation noise characteristics. They are wideband, phase equalized and can provide distortion-less baseband signals of up to 12 MHz.

Receivers intended for mounting in standard 19″ relay racks require 5¼″ of panel height. The unit illustrated above is shown in a bench type instrument case, which is an optional extra.

RHG's complete line of FM receivers are also available for airborne applications. They are packaged in B1D1 size standard "ATR" cases with built-in cooling. They utilize shock mount tray MS91405-B1D1 (not supplied).

SYSTEM PERFORMANCE CONSIDERATIONS

Wn individual transmitters or receivers are ordered, RHG utilizes a suitable lbratory standard mating test receiver or transmitter to perform final test on tl unit.

When a transmitter-receiver combination is ordered, RHG will perform applicle system tests on the units, as well as individual tests. These tests are cdducted with the transmitter and receiver connected by suitable attenuators tprovide a received signal level of −40 dbm nominal.

ypical fidelity characteristics are as follows:

TTESTS: (Std. 525 line pre and de-emphasis utilized)

Ung std. test signals per EIA RS-170

D. gain: ±0.25 db
D. phase: ±0.5°
Veo Signal to noise: 58 db p-p/rms (EIA weighting)
Veo Signal to hum: 50 db

NPR TESTS: (Using Marconi noise loading test set TF2091 & TF2092)
At baseband loading of 4 MHz. providing p-p deviation of 8 MHz, typical NPR is −40 db at the midband slot.

HARMONIC DISTORTION:
Single tone harmonic distortion, measured over this system baseband, at rated deviation is typically <2%.

INTERMODULATION (Two tone):
Utilizing two signals, each producing one-half the rated deviation, and producing in band 2nd and 3rd order products, these products are typically greater than 40 db down.

SPECIAL TESTS:
Any special testing requested to document some particular or unusual aspect of performance can be performed on a complete system, or an individual receiver or transmitter. RHG engineering personnel are available to discuss these requirements when applicable.

MIC MICROWAVE PRODUCTS

NEW FROM RHG

UNCOOLED PARAMETRIC* AMPLIFIERS

- Low Cost
- Unique Double Balanced* Design
- Single & Multistage
- "Gunn" Oscillator

The amplifier is an all solid state design fabricated on an alumina substrate. The circuit employs four varactor diodes in a double balanced ring resulting in wide bandwidth and minimum phase nonlinearity and IM distortion.

A cavity stabilized "Gunn" diode oscillator with a PIN diode leveling loop is used as a pump source. This results in improved gain stability and the lowest FM & AM noise. To provide additional gain stabilization, all critical components are mounted on a temperature stabilized base plate.

For outdoor operation, the entire assembly is housed in a rugged weatherproof housing. Rack mounted models for controlled environments provide similar electrical performance at some reduction in cost.

Model No.	In Band of (Freq. GHz)	Instant. Bandwidth (MHz)	Stages	Gain (db)	Noise Figure (db)
PAR1.5/1	1.4 to 1.6	200	1	17	1.6
PAR2.0/1	1.9 to 2.3	200	1	20	1.8
PAR2.0/2	1.9 to 2.3	350	2	20	1.8
PAR3.7/1	3.7 to 4.2	80	1	17	2.4
PAR3.7/2	3.7 to 4.2	500	2	17	2.2
PAR4.4/1	4.4 to 5.0	90	1	17	2.5
PAR4.4/2	4.4 to 5.0	450	2	20	2.5
PAR7.0/1	7.0 to 8.0	275	1	17	3.5
PAR7.0/2	7.0 to 8.0	475	2	20	3.5

NOTES:

1. Input/Output Impedance: 50Ω at VSWR $\gtrsim$1.5
2. Output Capability: $\geqq$−10 dbm at 1 db compression
3. All models operate from 115V 47-400 Hz.

OPTIONS:

1. Packaging: For 19" rack mount, add suffix "RM"
   For outdoor mounting, add suffix "OM"
   (Weatherproof −20 to +55°C operation)

*patent pending

PARAMETRIC AMPLIFIERS—General Information

FIG. 1

FIG. 2

Advantages of Double Balanced Design: The RHG design does not use bandpass or bandstop filters to isolate the key frequencies of interest (i.e., pump, signal, and idler). Because of this, the phase and amplitude characteristics of the amplifier are determined solely by the varactor diodes and not by the critical placement of filter poles or zeros. Separation of the pump, signal, and idler frequencies in the RHG paramps is obtained by the use of a ring connection of four diodes in a double balanced configuration. This is a unique design feature and a patent application has been filed.

Low IM Distortion: The use of four varactor diodes, instead of one, results in a 6 db improvement in the 1 db saturation point—with a corresponding significant reduction in IM products.

Improved Stability: The majority of standard RHG paramps contain two relatively low gain ($\simeq$10 db) stages in cascade. This results in the best signal phase and amplitude stability with respect to changes in pump power or frequency.

Noise Figure: Figure No. 1 is a graph of noise figure versus effective noise temperature. In general, the noise figure of a parametric amplifier is not related to bandwidth and cannot be improved merely by narrowing the passband. However, it can be lowered by either pumping at a higher frequency or by employing cooling with both these alternatives adding to the cost.

The products listed above tell a small part of the story about RHG's growing capability in microwave integrated circuitry (MIC). Drawing on its diversified experience in the receiver field, RHG will custom engineer a "front end" subassembly to your specifications. For example, preselector, isolator, and mixer-preamplifier may be packaged on a single substrate. Contact RHG's nearest Sales office or call direct for assistance.

MPX Series $595	MP4-8/2D	MPX4-8/2D	70-10	8.0 db

NOTES:
1. Gain: 25 db Min.
2. LO Injection: 0 to +3 dbm
3. LO-RF Isolation: 6 db (typ.)
4. Input VSWR: 1.5/1 (typ.)
5. Supply Voltage: +12VDC (MP Series) +6VDC (MPX Series)

MODIFICATIONS

1. RFI Protection: Standard on MPX and MMP series, $50 additional on all other units.
2. High Power Preamps: Providing +20 dbm output capability are available most models.

LOWER NOISE UNITS

Noise figures shown are single sideband, and represent typical performance for production units. Lower noise units, especially for spot RF frequencies can be supplied on special order. The use of "super-premium" diodes and/or transistors will generally result in improved noise figure. An AIL-type 70 Hot-Cold noi standard assures accuracy. Noise figures under 6.0 db have been achieved special designs.

EST6020	60	20	0.05	80	90	2.5	545

NOTES:

1. IF output capability >+13 dbm (1 V at 50Ω for <1 db compression
2. IF input and output: designed for 50Ω system. Input VSWR1.5:1 Nom.
3. Video output: emitter follower, direct coupled. Capability 5V into 93Ω
4. AGC: Closed loop provision built in with AGC delay to establish desired output level. Compression ratio 60 db in to 3 db out. AGC may be disabled and MGC will provide 60 db of manual control.
5. RFI protection consists of special filtered power connector assembly and RFI gasketing standard on all models
6. Power requirements: +12V at 160 ma (nom.), −12V at 160 ma (nom.)

STANDARD MODIFICATIONS

1. Units can be gain matched to ±2 db and phase matched to ±10° over 50 db AGC range. Add suffix "MAT" $200 additional per unit.
2. Wide Range Linear Detector—A new exclusive RHG detector circuit offering a linear detected output (±0.5 db over 30 db) is available. Add suffix "LD." $200 additional.

SOLID STATE

• All Silicon • IF and Video Outputs
• MIL Grade • Risetimes to 25 Nanoseconds

Model EVT6020

The "EVT" Series are all solid state, high gain amplifiers. They feature a high power IF output plus a low impedance detected output. They are capable of pulsed and CW amplification. Power required is +12 VDC at 100 ma.

"EVT" SERIES

Model	Center Freq. (MHz)	Band-width (MHz)	Rise-time (μsec)	Gain to IF (db)	Gain to Video (db)	Price
EVT1002	10	2	0.50	80	90	$395

EVT12020	120	20	0.05	65	75	525
EVT16040	160	40	0.025	60	70	795

NOTES:

1. IF Output: +10 dbm (min.)
2. Video Output: +5 V into 93Ω
3. Gain control range of 50 db is obtained with 0 to −5 VDC (typical)
4. Low noise input with VSWR <2:1. Standard on all models from 30 to 70 MHz. (NF ≃ 4 db).

STANDARD MODIFICATIONS

1. Low Noise Mixer Input (for reversed mixer xtals): 2 connectors plus crystal monitors. Add suffix "M" $75.00 additional
2. RFI Protection: Includes power line filtering and RF gasketing. Add suffix "RFI" $50 additional

MATCHED 3 CHANNEL IF AMPLIFIERS

• Phase matched to 5° • Gain matched to 1 db
• Ultraminiature size • MIL grade

Model ETM3010

The "ETM" series provides three matched IF amplifier channels suitable for use in monopulse and similar applications. Its small size and low power drain make it ideal for airborne applications.

"ETM" SERIES

Model	Center Freq. (MHz)	Band-width (MHz)	Gain (db)	Rise-time (μsec)	Price
ETM3004	30	4	80	0.25	$2250
ETM3010	30	10	70	0.10	2250
ETM6010	60	10	70	0.10	2250
ETM6020	60	20	65	0.05	2350

NOTES:

1. AGC range: 50 db (min)
2. Tracking: Channels A and B will be within 5° and 1 db of Channel C over 50 db AGC range, and temperature of −30 to +70°C.
3. Input Impedance: 50Ω at VSWR <1.5:1
4. Output Impedance: Designed for 50Ω load
5. Output Capability: 0.5 VRMS (+6 dbm) at <1 db compression
6. Noise Figure: <10 db—low noise versions to 2.5 db available. Specify suffix "LN"—$100 additional.
7. Power: +12 V at 150 ma (typical)
8. Size: Approx. 7 cubic inches per channel

LT12040

Model LLT6010

These series offer the user high fidelity "logging" of wide dynamic signal ranges thru the use of successive detection and video summing.

" SERIES

Model	Center Freq. (MHz)	Band-width (MHz)	Rise-time (μsec.)	Input Dynamic Range Volts	db	Price
L3002	30	2	0.5	250 μv to .25 v	60	$325
L3004	30	4	0.25	250 μv to .25 v	60	325
L3010	30	10	0.15	250 μv to .25 v	60	325
L6002	60	2	0.5	250 μv to .25 v	60	325
L6010	60	10	0.15	250 μv to .25 v	60	325

NOTES:
1. Input Impedance: 50Ω, VSWR 1.5 (typical)
2. Video output voltage: 0.2 to 2.0 volts into a 1KΩ load (typical)
3. Log accuracy: ±1 db over the dynamic range
4. Power required: —12 VDC @ 60 ma

SOLID STATE – ECONOMY

- Low Cost

Model LL6010

The "LL" series offers true log amplification in an economical package design. Features not required in all applications have been eliminated providing a low-cost high-quality design.

"SL" SERIES...The RHG Model TSL log test sets facilitate the specialized alignment and testing of log IF amplifiers.

Linearity: A dynamic test method permits adjustment of linearity while viewing a "plot" of signal input power versus output voltage on an ordinary oscilloscope (not supplied). Non-linearities can be measured to within ±¼ db. Front panel attenuator provides calibration.

Slope: A calibrated control provides settings from 10 to 100mv per db in 10 steps. A vernier provides non-calibrated continuous adjustments between steps.

Dynamic Range: Direct measurement is provided with a display showing the entire curve from "lift off" to saturation. A built-in source provides levels from +10 dbm to—90 dbm. A meter and screwdriver adjust provides calibration.

Pulse Response: An RF source capable of complete "turn off" and fast risetime (several RF cycles) is provided. This tunnel diode oscillator can be gated on and off by any standard pulse generator providing 10 volts or more. (Pulse generator not supplied.)

Matching*: An optional attachment permits two log amplifiers to be observed simultaneously, thus facilitating the matching of the units.

Modulation Check*: An optional attachment provides a modulated (constant percentage) RF signal which is swept, in amplitude, over the dynamic range. Variations in the demodulated output can be measured, providing a sensitive indication of the change of log slope over the dynamic range.

LOG AMPLIFIER TEST SET

- Rapid Dynamic Testing of Log Amplifiers

Additional Specifications

IF Frequency	30 or 60 MHz (10 to 100 MHz available on order)
Test Signal Range	+10 to —90 dbm
Power Available	±12 V at 250 ma for unit under test
Metering	Carrier level

Prices: Model TSL-30 (30 MHz) $3995
Model TSL-60 (60 MHz) $3995
Model TSL-XX (any freq. between 10 & 70 MHz) $4295

*Matching and modulation check options not included in price.

MINIATURE COAXIAL COMPONENTS

COAXIAL FILTERS

MINIATURE LOW PASS FILTERS

R L C Electronics' miniature low pass filters are available with cut-off frequencies ranging from 100 MHz to 5 GHz. These filters combine minimum insertion loss and low VSWR in the Pass Band, together with sharp skirt selectivity and high rejection in the Stop Band. This is accomplished by the utilization of multi-section, modern network design. Miniaturization of these units is accomplished by utilizing advanced coaxial techniques and optimum selection of materials. Both lumped constant and distributive techniques are utilized in the fabrication of these filters.

Model No.	Pass Band (MHz)	3 db Point (Typical) (MHz)	30 db Point (Typical) (MHz)	60 db (Min) Stop Band (MHz)
F-10-100	DC-100	125	150	180-500

Pass Band VSWR: 1.5
Pass Band Insertion Loss: 0.5 db max.
Power Rating: 25 watts average
Impedance: 50 ohms
Connectors: Type N, BNC, TNC, RSM *Male and female
Price: $60.00

MINIATURE HIGH PASS FILTERS

R L C Electronics' miniature high pass filters are available with cut-off frequencies from 100 MHz to 1000 MHz. These filters have no spurious response below the cut-off frequency. High dielectric materials and unique construction assure reliable operation for this miniature line of coaxial filters. Low VSWR and low insertion loss in the pass band are inherent in the design of these filters.

Model No.	Pass Band (MHz)	3 db Point (Typical) (MHz)	30 db Point (Typical) (MHz)	60 db (Min) Stop Band (MHz)
F-20-100	100-170	90	70	DC-50

Pass Band VSWR: 1.5
Pass Band Insertion Loss: 0.5 db max.
Power Rating: 25 watts average
Impedance: 50 ohms
Connectors: Type N, BNC, TNC, RSM *Male and Female
Price: $75.00

* To designate connector type, add suffix N, B(BNC), T(TNC), or R(RSM) to model number. (Example: F-20-100-R).

PRECISION LOW PASS FILTERS

R L C Electronics' precision low pass filters are available with cut-off frequencies ranging from 600 MHz to 12.4 GHz. These filters combine extremely sharp skirt selectivity and high rejection in the stop band, together with minimum pass band insertion loss, low VSWR and reasonable size. Extremely low pass band, VSWR and insertion loss are maintained by proper impedance matching of these filters. Sharp skirt selectivity is obtained by the utilization of multi-section modern network design. These filters incorporate extremely rugged features allowing them to be utilized in severe environments.

Model No.	Pass Band (MHz)	3 db Point (Typical) (MHz)	30 db Point (Typical) (MHz)	60 db (Min) Stop Band (MHz)
F-30-600	DC-600	630	720	810-3000

Pass Band VSWR: 1.35
Pass Band Insertion Loss: 0.5 db max.
Power Rating: 100 watts average
Impedance: 50 ohms
Connectors: Type N, BNC, TNC RSM *Male and Female
Price: $40.00

PRECISION HIGH PASS FILTERS

R L C Electronics' precision high pass filters are designed for operation over the frequency range of 1000 MHz to 10,000 MHz. Sharp rejection below the cut-off frequency and no spurious responses are assured in the use of these filters. Low insertion loss and low VSWR in the pass band are accomplished by the utilization of impedance matching and transforming end sections and combining them with precise coaxial fabrication. Rugged, lightweight construction makes the units suitable for extreme environmental conditions.

Pass Band VSWR: 1.8 nominal
Pass Band Insertion Loss: .8 db max.
Power Rating: 100 watts average
Impedance: 50 ohms
Connectors: Type N, BNC, TNC RSM *Male and Female
Price: $75.00

MINIATURE TUBULAR BAND PASS FILTERS — BPF-500 series

R L C Electronics' miniature tubular band pass filters are designed for operation over the frequency range of 60 MHz to 4000 MHz. These fixed tuned filters are constructed utilizing 3 to 6 sections with 3 db bandwidths of 2, 5, 10 and 20% of center frequency. These filters utilize direct coupled sections and have a maximally flat (Butterworth) response. Outside of the pass band no spurious responses exist from DC to 12.4 GHz.

***VSWR:** 1.5 **Impedance:** 50 ohms
Connectors: Type N, BNC, TNC, RSM
Price: 3 Sections $ 75.00
4 Sections 90.00
5 Sections 110.00
6 Sections 130.00
Power Rating: 25 watts

MEDIUM POWER TUBULAR BAND PASS FILTERS — BPF-750 series

R L C Electronics' medium power tubular band pass filters are available with center frequencies from 60 MHz to 4000 MHz. These fixed tuned filters are fabricated utilizing either 3, 4, 5 or 6 sections with a variation of 3 db bandwidths from 2 to 20% of center frequency. There are no spurious responses of these filters from DC to 12.4 GHz. These filters utilize direct coupled sections for optimum response.

Price: 3 Sections $ 90.00
4 Sections 110.00
5 Sections 130.00
6 Sections 150.00
Power Rating: 50 watts

MINI-LOSS TUBULAR BAND PASS FILTERS — BPF-1250 series

R L C Electronics' mini-loss tubular band pass filters are capable of handling 200 watts of average power. These units utilize lo-loss components, which insure optimum selectivity and minimum loss in the pass band. They are constructed using 3 to 5 sections with 3 db bandwidths of 2 to 20%.

Price: 3 Sections $110.00
4 Sections 130.00
5 Sections 150.00
Power Rating: 200 watts

† **NOTE:** When ordering a filter, you must specify center frequency, 3 db bandwidth (A, B, C, D), number of sections (3, 4, 5, 6), and connectors (N, B(BNC), T(TNC) or R(RSM.
Example: BPF-500-60-C-5-T, i.e. — 60 MHz center frequency, 10% 3 db bandwidth, 5 sections with Type TNC connectors.

Special filters requiring closer tolerances, different frequency ranges, special connectors, higher power rating, etc. can be provided. Specifications subject to change without notice.

MINIATURE COAXIAL COMPONENTS

COAXIAL SWITCHES

EMOTE "MITI-MIN" OAXIAL SWITCHES

RLC Electronics' Remote "MITI-MIN" Coaxial Switch is of a single pole, two position type. The switch provides extremely high reliability, long life and excellent electrical performance characteristics over the frequency range of DC — 12.4 GHz. The characteristics of the switch feature extremely low insertion loss and extremely low VSWR over the entire frequency range and in addition, very high isolation over the same frequency range. The "MITI-MIN" package utilizes high density packaging techniques, hence the over-all volume of the switch is less than .75 cubic inch. Fail-safe operation is provided.

Model No.	Switch Type	Freq. Range	Insertion Loss	VSWR	Isolation	Power Rating RF	Impedance	Connectors—RF	Operating Voltage	Connectors—Power	Life	Switching Time	Weight	Price

Add $25.00 for indicator

EMOTE OAXIAL WITCHES

R L C Electronics' remote coaxial switches employ advance techniques to provide maximum performance, reliability and long life. These switches are of the single pole, two position type. Features of these switches include low VSWR and low insertion loss from DC to 12.4 GHz, as well as extremely high isolation over this extended frequency range. These switches are suitable for either laboratory or production use. The size, weight and reliability enhance its inclusion as an integral part of a complex system. An indicator circuit is available, if needed. Fail-safe operation is provided. **SR-2 Price $100.00.**

Add $25.00 for Indicator. Add $15.00 for AC operation.

Model No.	Switch Type	Freq. Range (GHz)	Insertion Loss	VSWR	Isolation	Power Rating, RF	Impedance	Connectors, RF	Operating Voltage	Connectors, Power	Life	Switching Time

EMOTE MULTI-POSITION OAXIAL WITCHES

R L C Electronics' remote multi-position coaxial switches are precision assemblies, employing advanced RF techniques to provide maximum performance, reliability and long life. Features of these switches, include low VSWR and low insertion loss from DC to 12.4 GHz, as well as extremely high isolation over this extended frequency range. These switches are suitable for either laboratory or production use. The size, weight and reliability enhance their inclusion as an integral part of a complex system. An indicator circuit is available, if needed. Fail-safe operation is provided.

EMOTE MINIATURE OAXIAL WITCHES

R L C Electronics' remote miniature coaxial switches provide a small, compact switch with excellent microwave characteristics. These switches are of the single pole, two position type. Features of this switch include extremely low VSWR and insertion loss over the frequency range of DC to 3.3 GHz. Fail-safe operation is provided. This series of switches operates on DC only.
Price: CS-221 $30.00

Model No.	Switch Type	Freq. Range GHz	Insertion Loss	VSWR	Isolation
CS-221-*	Single pole, two position Break before make.	0 - 1 1 - 3.3	0.1 db 0.3 db	1.1 1.5	50 db 30 db

MANUAL COAXIAL WITCHES

R L C Electronics' manual coaxial switches employ precision mechanical assembly, together with advanced microwave techniques, to afford a highly reliable small, efficient coaxial switch. Standard switches are available in single-pole, two position; single-pole three position; single-pole four position; and single-pole six position. Features of the switch include low VSWR and low insertion loss from DC to 12.4 GHz and high isolation extended over this frequency range.

Price: SM-2- $100.00 SM-3- $150.00
SM-4- $160.00 SM-6- $170.00

Model No.	Switch Type	Freq. Range GHz	Insertion Loss	VSWR	Isolation

SM-3-*	3 position	0 - 7 7 - 12.4	0.3 db max 0.6 db max	1.25 max 1.6 max.	40 db min
SM-4-*	4 position	0 - 7 7 - 12.4	0.3 db max 0.6 db max	1.25 max 1.6 max.	40 db min
SM-6-*	6 position	0 - 7 7 - 12.4	0.3 db max 0.6 db max	1.25 max 1.6 max.	40 db min

ORDER TO ORDER
Specify model number of switch. Add suffix N, B(BNC), T(TNC), or R(RSM) for connector. Add suffix to designate operating voltage and suffix to add indicator circuit, if required. Thus SR-2-N-A-I is an SR-2 switch with an N connector, operating voltage of 115 Vac and equipped with an indicator circuit.

Special switches requiring closer tolerances, different frequency ranges, special connectors, higher power rating, etc. can be provided. Specifications subject to change without notice.

SPECIFICATIONS (ALL SWITCHES)

Impedance:	50 ohms
Life:	1,000,000 cycles, min.
Switching Time:	15 milliseconds, max.**
Power Rating:	50 watts average (except for CS 221, which is rated at 100 watts, average)
Connectors, RF:	Female N, TNC, BNC or RSM**
Operating Voltage:	115 Vac (specify suffix A)* 28 Vdc (specify suffix D)*
Indicator Circuit:	To specify, add I to model number.*
Connectors, Power:	Feed through solder lugs*

PRECISION MICROWAVE COMPONENTS

servo 4-BAND MICROWAVE SWEPT SIGNAL GENERATO

Model 404

- Covers from 1.0 to 12.4 GHz in one continuous, automatic sweep
- Self-contained, built-in programmer, no plug-ins require
- Versatile, automatic/manual band selection
- Solid state, integrated circuit design
- Human-engineered with push-button controls for ease and speed of operation
- Compact package, only 10½" high

servo MICROWAVE TWT AMPLIFIERS

Series 2000

- 1.0 to 18.0 GHz frequency range
- Gain at least 30 dB
- 10 or 20-watt power output
- TWT thermal sensor
- Helix overload and current meter

Series 3000

- Ultra-broad frequency range of 1.0 to 12.4 GHz in a single instrument
- 1-watt power output
- Pulse modulation capability
- Complete TWT protection

Series 4000

- 1.0 to 11.0 GHz frequency range
- 10-watt power output
- Pulse modulation capability
- Front panel gain and helix controls
- Excellent gain and phase stability

Series 5000

- NEW—All solid state power supply
- 1.0 to 12.4 GHz frequency range
- 1-watt power output

servo "SERVOMATIC"® SYSTEM ANALYZERS

Model 1999

For design, analysis and production testing of complex servo-mechanisms and control systems

- Function Generator
- Internal Modulator
- Phase Shifter
- Precision Attenuator

All Combined In One Compact Instrument

servo INFRARED & ELECTRO-OPTICAL

OPTICAL COMPONENTS & SYSTEMS

- Lenses
- Refractive Optical Systems
- Catadioptric Optical Systems
- IR Transmitting Materials

THERMISTOR BOLOMETER IR DETECTORS

- Immersed & Unimmersed Detectors
- Infrared Telescope Assemblies

For detection, measurement, analysis and control of IR radiation

Cable: SERVOGRAM European Office: Route de Berne 1, 1010 Lausanne, Switzerland

Transco Products, Inc. • 4241 Glencoe Ave. • Venice, Calif. 90291 • (213) 391-7291 • Telex 65-2448 • TWX 910-343-6469

TYPE-Y was designed to meet the requirement for a small, lightweight, coaxial switch having good R.F. performance over a broad bandwidth (0-11 GHz) with million cycle reliability. Two independent solenoids allow make-before-break or break-before-make operation; both may be on or off simultaneously. Approx. size 4" X 2½" X 1".

TYPE-A coaxial switch weighs only 12 oz. - extremely light for a multi-position switch. It has a broad bandwidth, 0-11 GHz. Four independent solenoids allow complete control over make/break contact operation. All positions can contact simultaneously. Fail-safe is easily provided by solenoid selection. Approx. size: 3" X 3" X 4" high.

TYPE-D is a SPDT, 0-12.4 GHz, coaxial switch available with 3 actuators - LATCHING, FAIL-SAFE, and PULSE. In the TYPE-DS, solid state circuitry replaces all auxiliary contacts and provides a high input impedance for pulse operation; fail-safe but only .84 watts for holding. Connectors: N, TNC, OSM. Approx. size: 1" X 2¾" X 2" high.

TYPE-E and TYPE-EM are rugged, service proven switches which have been continually improved ...frequency to 12 GHz with over 60 db isolation and life to 100,000 operations. TYPE-E is motor actuated. TYPE-EM is manual. Switches qualified to MIL specifications with SA nomenclatures. Approx. size: dia. 3", length E - 7" and M - 3".

TYPE-DT is a SPDT, 0-12.4 GHz, coaxial switch for small connector types. It offers the following choices: (1) TNC or SMA connectors, (2) latching or fail-safe, (3) 28 VDC or 115 VAC, and (4) with or without indicator circuits. 1,000,000 operation reliability. All this flexibility in about 2 cubic inches, 5 oz. Approx. size: 5/8" X 1¾" X 1¾" high.

TYPE-H is a coaxial transfer switch with excellent R.F. performance thru 12.4 GHz. Options: TYPE-N or other connector types, LATCHING ...with PM latch or FAIL-SAFE...rotary solenolid, 28 VDC or 115 VAC, with or without indicator circuits. Features: high isolation, 60 db, and high vibration spec., 20 g's. Approx. size: 1¾" X 1¾" X 2½" to 3¼".

TYPE-DO is a micro size coaxial switch with excellent R.F. performance from D.C. to 18 GHz. It is the result of Transco's fast reaction to meet the need of the ECM industry for extended frequency in less than 1 cubic inch with state-of-the-art R.F. performance and reliability of one million actuations Approx. size: ½" X 1¼" X 1" high.

TYPE-HT is a very small, lightweight, 0-12.4 GHz, coaxial transfer switch for connector types TNC or smaller. Available LATCHING or FAIL-SAFE, It has the same features and options as the TYPE-H. The latching is a 2 coil rotary design with PM latch. The fail-safe is a one coil rotary solenoid design. Stringent environmental specifications. Approx. size: 1¼" X 1½" X 2".

TYPE-MO is a six-position, up to 18 GHz coaxial switch designed for Type-SMA connectors. Each position has an individual solenoid. Switch is completely sealed, meets extreme environmental specifications, and is available with either a power connector or solder terminals. Life 1,000,000 operations minimum. Approx. size: 1½" dia. x 1½" + connectors.

TYPE-GV variable waveguide switch; fast, reliable switching...without blanking the transmitter. May be used as 3-port 2 position (SPDT) or as a power divider. (Five position power divider shown). See TYPE-GH for waveguide sizes available. Features: low VSWR and Insertion Loss with high reliability. Size related to frequency.

TYPE-GH are lightweight, 90° E-Plane switches available in WR-62, WR-90, WR-102, and WR-112. They are remote control, spring return, solenoid operated. Designed for use in a pressurized system, they feature: anti-bounce rotor braking device for more consistent switching action, printed circuitry, and switch position indicator. Size related to frequency.

TYPE-T11 is a blade antenna, UHF and L-BAND, aerodynamically shaped and qualified for high performance Mach 2-3 aircraft. The radiation pattern is omnidirectional for both UHF and L-BAND. Pattern shaping elements control patterns and improve horizon coverage. Filters and test probes are incorporated. Approx. size: 3½" X 7½" base, 8" high.

P/N 9C15300 is typical of broad-band, spiral antennas designed by Transco to meet customer requirements. It is a small, 2½" dia., light weight, 4 ounces, circular polarized antenna for receiving applications. Frequency is 2 to 12.5 GHz; VSWR is 2.0 max. Beamwidth is 60° to 95°. Beam squint is 5° max. Approx. size: 2½" dia. x 1½".

P/N 11C22900 shown is a 2200 to 2300 MHz monopole antenna for Mach 3 operation. The uniquely designed all metal blade is self supporting with no dielectric in the airstream above the mounting surface. Antenna also available in bands 1625 — 1675 MHz Collision Avoidance or 2750 — 2960 MHz Telemetry. Blade height: 1¼" approx.

P/N 90D10600 triplexer is a three channel multiplexer used to couple three transmitters to a common antenna. It provides at least 15 dB isolation between channels separated by 25 MHz in the telemetry band 2200 to 2300 MHz. Insertion loss is low, 1 dB max. VSWR is 1.5:1 max. within ± 1.0 MHz of each channel tuned center frequency. Approx. size: 5" dia. x 1¾".

TEEBRID is a 3-port hybrid with internal termination for in-phase power dividing or power combining, octave and multi-octave bandwidths. Unequal or equal power division (or combining) is independent of termination mismatch. All three ports are impedance matched. High R.F. power...stringent environmental specifications. Approx. size: 2" X 3½" X ¾".

MICROWAVE ENERGY SOURCES

ISOLATOR 2620-1101

SPECIFICATIONS

ELECTRICAL
Frequency: 1.110 to 1.320 GHz.
Isolation: 20 db.
Insertion Loss: 1.2 db.
VSWR (Input and Output): 1.20 maximum.

ENVIRONMENTAL
Temperature: —40°C to +85°C.

PHYSICAL
Dimensions: 0.625" dia. x 6.25" long.
Weight: 4.0 oz.

ISOLATOR 2620-1102

SPECIFICATIONS

ELECTRICAL
Frequency: 1.365 GHz to 1.690 GHz.
Isolation: 20 db minimum.
Insertion Loss: 1.0 db maximum.
VSWR (Input and Output): 1.20 maximum.

ENVIRONMENTAL
Temperature: —40°C to +85°C.

PHYSICAL
Dimensions: 0.688" dia. x 5.25" long.
Weight: 4.7 oz.

RESONATRON 2970-1000

SPECIFICATIONS

ELECTRICAL
Frequency: Manual tuning range, 5.2-6.0 GHz.
Service: CW.
Power Output: <10 mW from 5.4-5.9 GHz, <5 mW from 5.2-6.0 GHz.
Power Input: 175 VDC @ 13 mA nominal, 14 mA maximum; 6.5 V @ 250 mA nominal, 270 mA maximum.
Frequency Stability: Temperature, 30 kHz/°C from —54°C to + 95°C; Ep 200 kHz/V; Efil 5 MHz/volt.

ENVIRONMENTAL
Shock: 100 g, 7 ms, 3 axis, <±1.0 MHz FM.
Vibration: 15 g peak, 20-2000 Hz, 3 axis, ±1.0 MHz FM.
Altitude Limit: 100,000 feet.

PHYSICAL
Dimensions: ⅞" dia. x 2" long (less projections).
Weight: 3 oz.
Output Connector: TNC female.
Output Coupler: Capacitive, adjustable.
TYPICAL USE: Local oscillator, parametric amplifier pump, harmonic generator driver.

RESONATRON 9196-1009

SPECIFICATIONS

ELECTRICAL
Frequency: 5.4-5.9 GHz.
Service: Plate pulse.
Power Output: 500 watts peak minimum.
Power Input: 3 kV @ 2.5 amps; 6.3 V @ 550 mA nominal.
Frequency Stability: 30 kHz/°C from —40°C to ±95°C; Ep 6 kHz/V nominal; Efil 22 MHz/V nominal.
Pulse Width: 0.5-1.0 µs typical.
Rise Time: 50 ns nominal.
Fall Time: 50 ns nominal.
Fixed Delay: 50 ns nominal.
Jitter: <10 ns.
Duty Cycle: 0.001 maximum.

ENVIRONMENTAL
Shock: 100 g, 5 ms, 3 axis.
Vibration: 10-55 Hz, 0.1" D.A.; 55-2000 Hz, 20 g peak.
Acceleration: 100 g longitudinal 25 g any axis.

PHYSICAL
Dimensions: ⅞" dia. x 1 63/64" long (less projections).
Weight: 3 oz.
Output Connector: TNC female.
Output Coupling: Inductive, adjustable.
TYPICAL USE: Beacon, altimeter, transponder transmitter oscillator.

. . . a symbolic representation of **total microwave capability.**

CIRCULATOR 1420-1903

SPECIFICATIONS

ELECTRICAL
Frequency: 8.88 GHz to 9.68 GHz.
Isolation: 20 db minimum.
Isolation Loss: 0.3 db maximum.
VSWR (Ports 1 and 2): 1.25 maximum.
Power Rating: 0.5 watts peak.

ENVIRONMENTAL
Temperature: —40°C to +100°C operating. —54°C to +125°C storage.

PHYSICAL
Dimensions: 0.50" x 0.60" x 0.56" (less projections).
Weight: 0.7 oz. maximum.

RESONATRON 9170-1018

SPECIFICATIONS

ELECTRICAL
Frequency: Manual tuning range, 8.5-9.6 GHz.
Service: Plate pulse.
Power Output: 25 watts minimum from 8.5-9.4 GHz; 10 watts minimum from 9.4-9.6 GHz.
Power Input: Modulator 1200 V @ 0.6 amps peak nominal; 6.3 V @ 0.3 amps nominal.
Frequency Stability: Temperature, ±6 MHz from —45°C to+95°C.
Pulse Width: 0.5 µs.
Rise Time: 25 ns.
Duty Cycle: 0.005.
Jitter: 10 ns.

ENVIRONMENTAL
Shock: 100 g, 7 ms, 3 axis.
Vibration: 15 g peak, 20-2000 Hz <±1 MHz FM.
Altitude Limit: None.

PHYSICAL
Dimensions: 11/16" dia. x 2 3/16" long (less projections).
Weight: 3 oz.
Output Connector: TNC female.
Output Coupling: Inductive, adjustable.
TYPICAL USE: Beacon transmitter oscillator, high altitude sounding rockets.

RESONATRON 6056-9200

SPECIFICATIONS

ELECTRICAL
Frequency: 16.0 to 17.0 GHz.
Tuning: Electronic.
Input Voltage: —30 VDC.
Power Output: 5 mW to 15 mW.
Tuning Sensitivity: 250 MHz/volt.
Frequency Stability: 50 ppm/°C.
Spurious Response: 40 dbm nominal.

ENVIRONMENTAL
Temperature: —55°C to +85°C.

PHYSICAL
Dimensions: 5" x 1½" x 2¾" (less projections).
Output Connector: Waveguide.
TYPICAL USE: Local oscillator for frequency agility radar, signal generator, spectrum analyzer.

A complete catalog of solid state microwave sources, plus ferrite isolators and circulators is available. Please contact **TRAK MICROWAVE CORPORATION,** 4726 Eisenhower Boulevard, Tampa, Florida 33614.

micro-power

Microwave Instruments and Power Supplies

SOLID STATE MICROWAVE SWEEP OSCILLATOR Model 230A — 10 MHz to 18 GHz

- Single RF unit covers 10 MHz to 2 GHz, with leveled calibrated power.
- Very low residual FM and spurious signals.
- Internal, external and power meter leveling.
- Frequency accuracy of 0.25 to 0.5%.
- Multi-band sweeping.

Our new 230A weighs less than 22 pounds, yet has the same high resolution tuning and uncrowded control panel as the 221 sweeper. Has higher output power and less frequency pulling than other solid state sweepers; is compatible with all network analyzer systems; has 0 to 100% calibrated symmetrical sweep width control, and analog programmability for both frequency and power.

MICROWAVE SWEEP OSCILLATOR Model 221 – 200 MHz to 110 GHz

- 2 ppm peak residual FM
- Extreme stability with line voltage change
- 0 to 100% calibrated Δ f control
- Solid state or BWO plug-ins from 0.2 to 40 GHz

This easy-to-operate sweep oscillator offers the advantages of solid state devices in the 1 to 4 GHz frequency ranges, while also accepting a wide choice of BWO plug-ins for frequencies up to 40 GHz. Most bands are available with either internal or external, grid or diode leveling. All oscillators offer power meter leveling for exceptionally flat response. FM rate is DC to over 5 MHz. Mm – wave version available to cover 40 to 110 GHz ranges.

PROGRAMMABLE MICROWAVE SOURCE – Model 101 – 1.0 to 40 GHz in octave or waveguide ranges

- Voltage and/or resistance controlled source of microwave frequencies
- Programming speed 1 msec. for full band
- Linearity ±0.5% for full band
- For use in ground checkout equipment, production test stands, etc.

Use of the Model 101 eliminates the need for the systems engineer to select the proper BWO and then design and build the necessary power supplies and linearizing networks. Instead, it is only necessary to specify the required rf output. The input can be swept by any function, stepped or set at a fixed value. It can also be programmed through a digital to analog converter.

POWER SUPPLIES FOR MICROWAVE TUBES

- Modular power supplies for greater flexibility
- High regulation and stability (0.002% for line, 0.005% for load, 0.001 to 0.0001% ripple) for low incidental FM of oscillators and high phase stability of amplifiers
- All modules are 3½ in. or 5¼ in. rack-mounting units

Micro-Power power supply modules are available in a wide variety of outputs for powering BWO's, voltage tunable magnetrons, medium and high voltage klystrons, and TWT amplifiers. Choice of standard module combinations increases selectivity in matching supply characteristics to specific tube types and project requirements. Electrode supply voltages can be swept or otherwise varied at up to 20,000 volts/sec/mA.

GH POWER **PIN MICROWAVE** SWITCHING DIODES

ique Unitrode package for the me makes it possible to use odes in high peak and average e applications. A hard-glass fused to the terminal pins and th periphery of the silicon chip ues ultimate reliability under e RF stress conditions.

A Family of PIN Diodes Designed for High Power, Low Loss Microwave Switching Applications from 2MHz to Above X-Band.

Applications are in high power Duplexers, Phase Shifters, Receiver Protectors, RF Attenuators and RF Modulators.

eal packaging, such as insulated d ribbon leads, and pills for pie, are also available.

- **Series resistance to 0.1 ohms; Total capacitance to 0.5 pf**
- **Low reverse loss at zero volts bias**
- **Low parasitic inductance from whiskerless construction**
- **Megawatt peak-power duplexing now economically feasible due to diode high-current capability (up to 1000 amps peak RF)**

POWER DISSIPATION	Part No.	PIV [1]	ELECTRICAL CHARACTERISTICS

C-BAND RADAR TRANSPONDER

MODEL 302C-2 Freq: 5.4-5.9 GHz: **Receiver Type:** Superhet with sensitivity of - 70 dbm; **Transmitter Type:** Magnetron wity 400 w min. peak power output; **Input Power:** 22 to 32 VDC; **Size:** 43 cu. in.; **Weight:** 43 oz.; **Temp:** - 35° to + 75° C; **Altitude:** 230,000 ft.; **Humidity:** 100%; **Shock:** 125 g in any direction, 3 shocks in opposite directions along each axis for 6 μ sec each; **Acceleration:** 125 g applied along any axis for 3 minutes; **RFI:** Per MIL-I-26600. **Vibration:** sinusoidal, 5 to 25 Hz 0.4 in. DA and 15 g 15 to 2500 Hz.

S-BAND RADAR TRANSPONDER

MODEL 312S

Freq: 2775 - 3000 MHz; **Receiver Type:** Superhet with sensitivity of -70 dbm; **Transmitter Type:** Triode cavity with 300 w min. peak power output; **Input Power:** 22 to 32 VDC; **Size:** 50 cu. in.; **Weight:** 47 oz.; **Temp:** -55° to +75° C; **Altitude:** 230,000 ft.; **Humidity:** 100% **Shock:** 125 g in any direction, 3 shocks in opposite directions along each axis for 6 μ sec each; **Acceleration:** 125 g applied along any axis for 3 minutes; **RFI:** Per MIL-I-26600; **Vibration:** sinusoidal, 5 to 25 Hz, 0.4 in. DA and 15 g 15 to 2500 Hz.

C-BAND RADAR TRANSPONDER

MODEL 321C

Freq: 5400-5900 MHz; **Receiver Type:** Superhet with sensitivity of - 70 dbm, 100% firing; **Transmitter Type:** Triode cavity with 300 w min. peak power outputs; **Input Power:** 24 to 32 VDC, 45 w; **Size:** 38 cu. in.; **Weight:** 44 oz.; **Temp:** -37° to +75° C.; **Altitude:** 230,000 ft.; **Acceleration:** 125 g; **Shock:** 125 g; **Vibration:** Sine, 5 to 25 Hz, 0.4 DA 25 to 2500 Hz, 15 g. **RFI:** Per MIL-I-26600.

TELESPONDER TELEMETRY SYSTEM

MODEL 603C is used in missile, satellite, drone, target and aircraft application as an enchancement device and telemetry system for a C-band tracking radar. The Model 603C telemetry system is designed to work in conjunction with Vega Models 202CD, 302CD transponders. The 603C telemetry system is comprised of two separate units: the Model 706-7 Seven Channel Telemetry Airborne Encoder and the Model 707-7A Seven Channel Telemetry Ground Demodulator. The 706-7 airborne unit is mated with the desired transponder whereas the 707-7A ground unit is mated with an appropriate C-band tracking radar, Model 706-7. **Encoder specs include: Telemetry Input Impedance:** 200,000 ohms min; **Telemetry Input Channels:** 1 to 7, serial or parallel combinations; **Telemetry Input Voltage:** 0.0 V to +5.0 VDC; **Sync Channels:** one; **Sampling Rates per Channel:** 80/sec. (160 prf); **Spacing Between Transponder and Telemetry Reply Pulse:** min. 50 μ sec., max. 137 μ sec.; **Accuracy of Voltage to Time Conversion:** ±1% of +5 v.

7-CHANNEL TELEMETRY DEMODULATOR

MODEL 707-7A is compatible for use with the FPS-16 and FPQ-6 radars and is an active portion of the ground readout system of the return pulse from a Vega transponder and 706-7A encoder. The demodulator outputs are suitable for readout onto a Model 1508 Minneapolis Honeywell Visicorder or for storage by a digital tape unit. The digital output for recording is a continuous serial binary train using either NRZ-M or NRZ-C format.

X-BAND RADAR TRANSPONDER

MODEL 319X

Freq: 9100 - 9600 MHz; **Receiver Type:** Superhet with sensitivity of -65 dbm; **Transmitter Type:** Magnetron with 400 w min. peak power output; **Input Power:** 22 to 32 VDC; **Size:** 43 cu. in.; **Weight:** 43 oz.; **RFI:** Per MIL-I-26600; **Humidity:** 100%; **Temp:** -35°to +75°C.

PULSE CODE GENERATOR

MODEL 715 is capable of producing up to fi pulses, independently variable in position fro 0 to 100 μ sec. Pulse width is variable from .25 sec. to 1000 μ sec. in four overlapping range Incorporated is a recovery time feature whic allows a coded pulse pair to be delayed from th first pair, up to 1000 μ sec. Any of the fi pulses may be used without the presence of an others. **Other specs include:** Repetition rate of pps to 500 KHz; Stability of 2% at 1000 pp Amplitude of 0.15 v into 50 ohms and 20 v int 1000 ohms; Polarity, neg. or pos.; Rise and fa time of 10 nanosec or less; Delay from .25 μ se to 100 μ sec.

C-BAND INTERROSPONDER

MODEL 609C is a C-band transponder test se which is essentially a small radar device used i operationally checking a C-band transponder as would be normally interrogated by the trackin radar. The unit is also designed to operate wit the Vega Model 707-7A Telemetry Demodulator fo checking out the Vega Telesponder Telemetr System. The unit provides either single or doubl pulse interrogation with a code spacing adjust ment. The self-contained unit operates on 24 t 30 VDC and/or 115 V, 60 - 400 cps. An interna battery supply with self-contained charging circu is optional. A waveguide horn antenna is avai able with the unit or can be user supplied. Check the following transponder parameters: Receive Frequency; Receiver Sensitivity; Transmitte Frequency; Transmitter Power Output; Cod Spacing. X-Band available.

S-BAND RADAR TRANSPONDER

MODEL 206S

Freq.: 2700 - 2950 MHz; **Receiver Type:** Crystal video with sensitivity of -41 dbm (min.); **Transmitter Type:** Triode cavity with 150 w power output and 300 - 500 w on special order; **Input Power:** 6.9 VDC ± 10% or 28 VDC ± 10%, 9 watts quiescent; **Size:** 25.5 cu. in; **Weight:** 26 oz.; **Pressurized:** 15 PSI; **Temp.:** -20° to +70° C; **Vibration:** 5 to 200 cps at 10 g 3 min. sweep; **Shock:** 100 g all planes, 11 msec duration; **Acceleration:** 80 g in all planes.

Full specifications are available on request and quotations can be made to your requirements and special applications. All these units are of high environmental specifications for space, aircraft, targets and other uses.

VEGA® PRECISION LABORATORIES

-BAND NTENNA ODEL 835X

op Vee Antenna was developed primarily for craft application in association with an X-Band dar transponder. The antenna is a circularly larized omni-directional antenna enclosed within iberglass radome. The antenna is characterized its compactness and is extremely lightweight hile still maintaining the electrical and vironmental characteristics required by this be antenna. The height of the radome is apoximately one-half inch and the diameter of the dome is approximately one inch. Mounting of e antenna is accomplished via a three-inch ameter mounting plate which also serves as a ound plane for the antenna. A C-Band version odel 836C) of this antenna is available. **Freq.:** 0 - 9.69 GHz; **VSWR:** < 1.5:1; **Beamwidth:**)° ; **Pol:** circular; **Power:** 1.5 kw peak; **Conector:** TNC; **Weight:** 1.5 oz.

C-BAND ANTENNA
MODEL 845C

Stub Antenna was developed primarily for aircraft application in association with a C-Band radar transponder. The antenna is a vertical polarized omni-directional antenna enclosed within a radome. The antenna is characterized by its compactness and is extremely lightweight while still maintaining the electrical and environmental characteristics required by this type antenna. The height of the radome is approximately three-quarter inch and the diameter of the radome is approximately three-eighth inch. Mounting of the antenna is accomplished via a three-inch diameter mounting plate which also serves as a ground plane for the antenna. **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 1.5:1; **Beamwidth:** 70°; **Pol:** Vert.; **Power:** 1.5 kw peak; **Connector:** TNC; **Weight:** 1.5 oz.

C-BAND ANTENNA
MODEL 801C is a lightweight slotted blade antenna developed as part of a C-Band Radar Transponder System for use on the Nike Apache Vehicle. Linear radiation coverage with minimum aerodynamic drag were key requirements in the design of this antenna. The body of the antenna is constructed of stainless steel which gives excellent reliability in missile environments with no degradation in electrical performance. The antenna may be used as a single element or in multi element arrays depending on the particular application and desired pattern coverage. The companion dividers are Models 853-2C, 854-3C and 855-4C (two-way, three-way and four-way respectively). **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 2.0:1; **Imp:** 50 ohms; **Pol:** Linear; **Connector:** TNC; **Weight:** < 3.0 oz.; **Power:** 1.0 kw peak.

C-BAND ANTENNA
MODEL 820C

ntenna is an optical quartz-loaded, cavity acked helix radiator which produces a right hand ircular polarized radiation pattern. The use of uartz material provides for high and low temperture stability with no degradation in electrical erformance. Flush mounting is normally used on eentry vehicles with no performance deterioration s a result of reentry heat. Low thermal conductivity f the quartz material controls the heat transfer rom the face of the antenna so that very little eentry heat is conducted to the antenna connector. his permits the use of standard mating connectors. Companion power dividers Models 853-2C, 854-3C and 855-4C are used for arraying two, three or our antennas about the missile. **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 1.5:1; **Pol:** RHC; power 1.5 kw peak; **Gain:** 6.0 db; **Beamwidth:** 130°; **Temp.:** 1700° front surface exposure; **Weight:** < 2.0 oz.; **Shock:** 300 g's.

C-BAND POWER DIVIDER
MODEL 857-2C Variable Power Divider was designed to divide the output power of a C-Band Radar Transponder equally between two antenna elements when mounted in airborne vehicles and using unequal lengths of coaxial transmission lines. The design is such that the output power to each leg can be varied from a balanced condition to that of all power in either output leg. With the power divider adjusted to compensate for unequal cable losses, equal power will be radiated by each element of a two element array. The input VSWR is less than 1.3:1 and is tunable over the frequency range of operation. Also available are Models 856-2S (S-Band, 2.7 - 3.0 GHz) and 858-2X (X-Band, 9.1 - 9.6 GHz). **Freq.:** 5.4 - 5.9 GHz; **Insertion Loss:** < 0.5 db; **Power:** 1.0 kw peak; **Size:** 3 1/4" x 2 1/2" x 2"; **Weight:** 12 oz.

S-BAND ANTENNA
MODEL 815S was developed as part of a lightweight S-Band Antenna System for use in the Nike Tomahawk missile for purpose of transmitting tracking data. The antenna is a cavity backed helix with the helix embedded in quartz which is also used as the dielectric cavity. Mounting is accomplished via a mounting flange which can be adapted to a variety of mounting configurations. Flush mounting is used on reentry vehicles with no performance deterioration as a result of reentry heat. Low thermal conductivity of the quartz allows little of the heat to be conducted to the antenna connector therefore standard mating connectors may be used. A C-Band version of this antenna is also available. **Freq.:** 2.7 - 2.95 GHz; **Pol:** RHC; **Gain:** 7.0 db; **Beamwidth:** 130° nominal; **VSWR:** < 1.5:1; **Temp:** 1000° F, front surface exposure; **Vibration (random):** 48 g. rms; **Shock:** 78 g; **Acceleration:** 100 g.

C-BAND POWER DIVIDER
MODEL 853-2C was developed as part of a lightweight C-Band Antenna System which can be installed in any of a large groupe of missiles. Model 853-2C and 855-4C, three-way and four-way respectively, are also available. The body of the power divider is constructed of stainless steel which gives exellent reliability in missile environments. The interior of each power divider consists of an output arm which goes through one or more transformer stages, and then couples with two or more output arms to complete the power division. Each power divider has pre-drilled holes for mounting purposes. **Freq.:** 5.4 - 5.9 GHz; **VSWR:** < 1.3:1; **Imp:** 50 ohms; **Insertion Loss:** < 0.5 db; **Power Div:** ± 0.5 db; **Power:** 1.5 kw peak;; Weight: 853-2C, 2.3 oz.; 854-3C, 2.5 oz.; 855-4C, 2.7 oz.

S-BAND ANTENNA
MODEL 802S

Slotted Blade Antenna was developed for Telemetry and Command functions on the Nike Apache vehicle. The antenna provides linear radiation coverage with minimum aerodynamic drag. The body of the antenna is constructed of stainless steel which gives excellent reliability in missile environments with no degradation in electrical performance. The antenna may be used as a single element or in multi element arrays depending on the particular application and desired pattern coverage. The companion power dividers are Models 850-2S, 851-3S and 852-4S (two-way, three-way and four-way respectively). **Freq.:** 2.2 - 3.3 GHz; **VSWR:** 2.0:1; **Imp:** 50 ohm; **Pol:** Linear; **Power:** 1.0 kw peak; **Connector:** TNC; **Weight:** < 2.0 oz.

S-BAND POWER DIVIDER
MODEL 850-2S was developed as part of a lightweight S-Band Antenna System for use in the Nike Tomahawk missile. Models 851-3S and 852-4S, three-way and four-way respectively, are also available. Tracking coverage may be obtained with two, three or four antennas in operation with the use of the appropriate power divider. The interior of the power divider consists of an input arm which goes through one or more transformer stages, and then couples with two or more output arms to complete the power division. TNC connectors are brazed to the power divider body in which mounting holes are provided. **Freq.:** 2.7 - 2.95 GHz; **VSWR:** < 1.25:1, **Insertion Loss:** < 0.5 db; **Vibration (random):** 48 g rms; **Shocks:** 78 g; **Acceleration:** 100 g; **Weight:** 850-25, 2.2 oz.; 851-3S, 2.4 oz.; 852-4S, 2.7 oz.

DOUBLY BALANCED MIXERS

WIDE BANDWIDTH
HIGH ISOLATION
LOW INSERTION LOSS
LOW NOISE FIGURE
FLAT CONVERSION EFFICIENCY
LOW INTERMODULATION PRODUCTS

ADVANTAGES OF BALANCED MIXERS:

Mixing consists of the non linear multiplication of two signals as for example W_{RF}, and W_{LO}. In communication work the object of this process, also referred to as "modulation," is to extract the frequency terms, $W_{IF} = (W_{LO} + W_{RF})$ or $W_{IF} = (W_{LO} - W_{RF})$, corresponding to either up or down conversion respectively.

The semiconductors used to accomplish this function depart from ideal square law operation and, in non balanced mixers, produce undesired output products in addition to the desired IF signal. An additional problem arises when the RF or LO frequencies fall within the bandwidth of the IF amplifiers following the mixer. These fed-through signals can overload the subsequent stages causing blocking or additional troublesome products. The solution to this problem in the past has been carefully to select LO, RF, and IF frequencies so that spurious products and fed-through input signals occurred as much as possible outside the IF band. The IF amplifier was usually designed with a very sharp bandpass characteristic so as to reject troublesome signals near the IF band, and in some cases multiple conversion IF amplifiers were needed.

The balanced mixer greatly reduces these problems for the system designer. The **singly balanced,** or two diode, mixer suppresses **one** of the input signals and its associated **even** harmonic components. The other input signals and its harmonics still come through the mixer along with harmonic sum and difference frequency products. The **doubly balanced** mixer improves still further the suppression of unwanted spurious signals. In this device **both** of the input signals and their **respective harmonics** are greatly suppressed at the IF output port.

Further advantages of the Doubly Balanced Mixer result from its interport isolating properties. For instance, an LO signal applied to the mixer is attenuated at both the RF and IF ports. This attenuation (typically 40 DB) reduces the problem of oscillator re-radiation as well as IF amplifier overloading. Similarily for low IF frequencies this same isolating property tends greatly to reduce the problem of local oscillator pulling. The Shottky barrier diode is ideal for balanced mixers because of its inherent fast turn on, low noise, and highly consistent parameters. In practice the diodes for any given mixer are matched for forward resistance at several points on the EI curve. The use of these devices allows the balanced mixer to handle linearly a wide range of input signal levels. The above information is expanded and illustrated in graphic form in Vari-L Bulletin 106 which is available upon request.

Z-MATCH DOUBLY BALANCED MIXERS are packaged in two ways: 1. laboratory-test-equipment style with coaxial connectors; and 2. as pin types suitable for circuit boards. This permits cable connection during the breadboard phase, and then permanent adaption as a circuit component.

ADDITIONAL APPLICATIONS: MODULATOR / Because one port is coupled to DC, the unit may be used as a pulse modulator with unlimited pulse duration. Insertion Loss is —4 dB at f_{max}, and less at the lower frequencies. The RF input is made to port L, modulation to port X, and the output from port R. Total current should not exceed 50 ma. The modulator will exhibit a 35 dB on/off ratio at f_{max} (greater at the lower frequencies) and a turn-on/turn-off time of less than one nanosecond. As an AM modulator, with the X port used for the modulation-signal input, the mixer has excellent carrier rejection at high frequencies. The carrier may be reinserted after the modulator, or can be caused to feed through the mixer in controlled amounts by the introduction of a DC bias (suitably isolated from the modulation source) into the X port. The bias can be of either polarity, but should not create current in excess of 50 ma.

CURRENT-CONTROLLED ATTENUATOR / By the use of a DC bias as described above, the mixer can function as a current-voltage controlled attenuator. With zero current into the X port the attenuation of an RF signal of frequency up to the specified f_{max} will be at least 35 dB, reducing to approximately 3 dB when the bias current is increased to 10 ma. Response time from full-on to full-off condition is less than one nanosecond. For this service the signal is introduced to the R port and the output taken from the L port.

PHASE DETECTOR / The X port, being DC coupled, makes it possible to extract a DC voltage as a function of the phase difference between two signals. The mixer introduces minimal 1/fnoise because of the inherent low-noise quality of the diodes, and their superior balance makes a DC adjustment of the phase detector unnecessary.

CONSTRUCTION

The mixers housed in the CA style enclosure are moderately priced, of general utility and have coaxial connectors. Standard units listed in the tabular columns are BNC equipped but parts are carried in stock for fast delivery of corresponding models with TNC connectors. The enclosure is brass, tin nickel plated and is sealed. The EA style units are epoxy imbedded and are designed for the ruggedness and space economy associated with an encapulsated device. The transformers and connections thereto have the time-proven Vari-L cushioning means and are completely sealed into the epoxy. A small well houses the diodes and permits a final check on matching, and this is then filled with polystyrene foam and sealed with a thin layer of encapsulant. The SPA types are constructed on a glass-seal header with pin connections and are completely shielded. A mounting stud is provided for strength and good grounding. The two "G" terminals are connected to the base internally by the shortest possible path. The case and cover of the CB type units are of cast aluminum, and the diodes are replaceable. This is a deluxe series of mixers which have no equal in this size and price range. Application of model DBM-400A, including a DC-1GHz test sweep generator are described in Vari-L Bulletin 101. The CC series units are housed in a manner similar to the CA units but are smaller. The CC style mixers all have OSM connectors.

T IDENTIFICATION: L: LO PORT; R: RF PORT; X: IF PORT. All measurements made in a 50 ohm system with LO power of +7 DBM (5 W). MAX. input power (total): 50 MW. Rated conv. loss and LO-RF ges maintained over a range from −55 to +100C°. Notes for models DB-400 and DBM-400A: 1. Conversion loss figures apply to RF and/or D frequencies in the ranges shown and an IF output frequency of 0 GHz (750 MHz for DBM-400A) or lower. The X port response extends to 1.5 GHz (1.0 GHz for DBM-400A) with approx. 1 Db increase in conversion loss. 2. (DBM-400 only) for UP conversion with IF frequencies above 1.5 GHz, interchange R and X ports. (R port is now IF output.) Apply the lower frequencies (below 1.5 GHz) to the X port.

* Potted for high shock and vibration requirements. MAX operating temperature: −55 to +125°C

Z-MATCH

WIDEBAND FREQUENCY DOUBLERS

Models WD-100, 101, and 102 were developed as components of laboratory equipment to double the frequency of high-level sweep generators, thus extending their range of usefulness. Since the output of the doubler is of relatively high level, the signal obtained is comparable to that of an expensive BWO unit, and a set-up can be made with existing equipment and appreciable savings are effected. The units, being quite small and compact, are often used as part of the local oscillator source for receivers, so they are recommended both as components of larger equipment and as laboratory test devices. The doublers are housed in extruded aluminum cases and are fitted with 3.6 mm. input and output connectors and have 50 ohm input and output impedances. The circuit employs a custom-designed Z-Match input transformer and two carefully matched Schottky barrier diodes. The output circuit (Model WD-100 only) is isolated for DC by a special chip capacitor. The circuit elements and supporting structure are encapsulated in high-temperature polyurethane foam. Full electrical specifications are listed in the table below. Operating temperature range is −55 to +100°C.

Fig. 7 Doubler outline drawing

Fig. 8 Doubler schematic

SPECIAL WIDEBAND PRODUCTS

The engineering staff which has developed the components shown in this catalogue has a diversified knowledge of wide band and other RF components for applications from VLF up into the microwave region. We have made two, four, and eight way power dividers, directional couplers, special antenna couplers, hybrid junctions, and numerous other custom devices to solve difficult circuit problems. We invite your inquiry and will give it prompt and careful attention. A competent technical person is always available for consultation by telephone or visit to your plant.

DOUBLER SPECIFICATIONS

MODEL	FREQUENCY RANGE INPUT-OUTPUT	IMPEDANCE INPUT-OUTPUT	INPUT POWER NORMAL OPERATION	CONVERSION LOSS	FUNDAMENTAL +3rd HARM. SUPPRESSION	OUTPUT LEVEL VARIATION OVER THE BAND	PRICE 1-9

ELECTRICALLY VARIABLE (CURRENT CONTROLLED) INDUCTORS

Vari-L Co., Inc. was founded in 1953 and derived its corporate name from its first product—variable inductors. A catalogue line has been maintained, and in addition several hundred special designs, some of which are illustrated at the right, have been made for critical applications. Many of these serve an important part in the performance of industrial measuring equipment and in apparatus important to our national defense. The catalogue line now consists mostly of the very versatile MITE series units listed on the following page, but the technical know-how to design and build special wide-sweep inductors still exists and is at your service.

For other Vari-L products see Sections 1800 and 5600.

Precision Microwave Component and Instruments

FIXED COAXIAL ATTENUATORS DC—18.0 GHz

has the largest product line of fixed coaxial RF attenuators in standard and miniature sizes. These attenuators feature long-term stability; the ability to withstand a wide temperature environment and high peak powers; excellent connector repeatability, resulting in repeatable insertion loss and low VSWR; and excellent durability. All attenuators are supplied with stainless steel Type N connectors, except the Models 3 and 4 which are furnished with stainless steel Type WPM connectors which mate nondestructively with other SMA connectors.

MODELS 1 & 3

MINIATURE STEPATTENUATORS DC—18.0 GHz

offers the most complete product line of miniature stepattenuators available in both manual and programmable models. Features of these stepattenuators are long performance life with no change in operating characteristics; a choice of 17 standard attenuation ranges in 1 and 10 dB increments; short switching time of typically 2 sec/10 steps; and repeatability better than 0.03 dB/drum up to 18.0 GHz. These durable stepattenuators will operate in excess of 1,000,000 steps without significant mechanical wear, due to a unique slide-switch* action. Both manual and programmable models are available in frequency ranges of DC to 8.0 GHz, DC to 12.4 GHz, DC to 18.0 GHz, 8.0 to 12.4 GHz, and 12.4 to 18.0 GHz. All models of stepattenuators are available in a choice of either Type N or Type WPM stainless steel connectors, or waveguide flange (X or P band).

*Patent Pending

MODEL 93-90

MODEL 96-90

COAXIAL RF TERMINATIONS DC—18.0 GHz

Coaxial RF terminations produced by feature extremely low VSWR. All terminations will dissipate 1 watt average power and 1 kW peak, except the Model 569A which handles 20 watts average and 6 kW peak. All terminations are supplied with stainless steel connectors.

MODEL 1404

PRECISION RF POWER LEVELER

The Model 1805 ensures precision results in transferring calibration factors of a primary standard to secondary standards (terminating or feed-through mounts) and power meters. In conjunction with a DC-to-RF continuously variable attenuator (PIN modulator), it establishes and maintains constant, precisely known RF power reference levels. It employs DC substituted and bias power. Selectable DC substituted levels are 0.5, 1.0, 5.0, and 10 mW, also external capability. Selected levels maintained to within ± 0.1% + 1 μW over RF source variations of ± 3dB.

MODEL 1805

VARIABLE ATTENUATORS DC—11.0 GH

MODEL 940

precision variable attenuators provide long life operation; continuously variable operation with linear, broad attenuation coverage long-time stability, resulting from using proven resistive films; and direct reading individually calibrated incremental insertion loss scales. Many models are available in uncalibrated level set versions and with locking devices; all models can be obtained in bench or panel-mounting configurations. All variable attenuators are supplied with stainless steel Type N connectors except the Model 940 which is furnished with stainless steel Type WPM connectors which mate nondestructively with other SMA connectors.

A dual-channel system employing a reference and measurement channel is recommended for independence of variations in source level when making fixed- and swept-frequency measurements, especially when a greatly expanded display is desired. provides the Model 1810 Stabilized RF Ratio Meter for use in dual-channel measuring systems. The addition of the Model 1815 Data Nomalizer to swept-frequency systems results in the elimination of all reference line variations due to the frequency sensitivity of system components. The Model 1815 provides a direct rectilinear output in dB vs. frequency for recording on standard chart paper.

STABILIZED RF RATIO METER

MODEL 1810

The Model 1810, when used with an RF source and appropriate microwave components, permits making accurate swept-frequency measurements of insertion loss, VSWR, and gain. It can measure these microwave parameters, expressed as a power or voltage ratio, over a 30 dB RF range. (Measurements in excess of 60 dB are possible with a slight reduction in accuracy and resolution.) It permits matching the swept RF response of crystal mounts, barretter mounts, couplers, attenuators, equalizers, etc. with the swept response of a selected reference unit or standard. The Model 1810 measurements are independent of power level variations of active devices and can be made without the need for a power-leveling loop. Its two channels (reference and signal) have a common mode rejection of better than 0.002 dB/dB for a 12-dB RF level change. The Model 1810 permits direct reading of VSWR in .005 increments on a 1.5 full scale, and with square-law inputs (crystal or barretter), provides a linear dB output which is the log of the ratio of its two inputs.

MODELS 1815 w/1815-2

DATA NORMALIZER

Selecting components, which track within the specified limits of a standard, can be easily accomplished using the Model 1815 in conjunction with the measuring capabilities of the Model 1810. The Model 1815, with plug in capability, is used for normalizing the amplitude vs. frequency reference curves of a swept-frequency measuring system, and results in an output from the Normalizer of only the measured characteristic of the device under test. The Normalizer output, reading in dB vs. frequency, can be recorded directly on rectilinear chart paper without the need to plot a complete set of reference curves. The Model 1815 normalized, rectilinear output permits automatic swept-frequency testing and eliminates time-consuming computations and interpolations which can provide inaccurate results. Sweep speed output is selectable, 25 and 50 seconds. A GO-NO/GO limit testing option is also available.

DATA NORMALIZER PLUG-INS

MODEL 1815-1

MODEL 1815-2

Plug-ins for the Model 1815 are the Model 1815-1 Log Converter which adapts the Normalizer to operate with many existing audio measuring systems having a linear output, and the Model 1815-2 Multi-Band Controller which automatically controls the sequencing and RF switching of up to four sweep generators to obtain a single continuous display.

DC TO AC UNIVERSAL INVERTERS

New, universal inverters for operating 110-v., 60 cycle AC equipment from DC voltages in autos, buses, trucks, boats, trains, planes and DC districts. Designed especially for standard 110-volt AC tape recorders, TV sets, radios, PA systems, electric razors, test equipment, etc. Units are carefully engineered and ruggedly constructed to provide long life operation. All feature complete RF interference suppression and exceptional frequency stability. Have operating efficiency in excess of 75%. Four-point voltage regulator corrects output voltage for minimum and maximum loads, and also helps compensate for input voltages lower or higher than normal. Inverters are recommended for use with loads having power factors in excess of 70%. Built-in toggle switch selects most efficient operation for use with TV sets or tape recorders. Inverters are not recommended for use with large motor driven appliances such as refrigerators, washing machines, etc. All have ON-Off switches. Housed in attractive brown hammerloid metal cabinet with convenient leather carrying strap. Sizes: Standard Model RSF, 9½x9¾x5¼"; Heavy-Duty Model RHG 6¾x11¼x8½", Extra-Heavy-Duty Model HSJ, 6½x12¾x8½". With battery clips for instant connection to power source. Models with "P" suffix equipped with adapter cord for use in auto cigarette lighter receptacles. *Recommended for24 volt battery operation. **Before ordering, check wattage of equipment with which inverter will be used.**

PORTABLE PLUG-IN TYPE INVERTERS

SPECIALLY DESIGNED FOR OPERATING STANDARD A. C. DICTATING MACHINES, RECORD PLAYERS, INCANDESCENT LAMPS, ELECTRIC RAZORS, ELECTRONIC TEST EQUIPMENT, AND OTHER SMALL ELECTRICAL AND ELECTRONIC DEVICES FROM D. C. VOLTAGES IN AUTOMOBILES, BUSES, TRUCKS, BOATS, PLANES, TRAINS, AND D. C. DISTRICTS.

Lightweight inverters for operating 110 v. AC equipment from DC voltage sources. Feature excellent frequency stability and high efficiency. 6 and 12-volt units plug into cigarette lighter receptacle of any vehicle; others are equipped with standard 2-prong plugs. All are designed especially for use with dictating machines; record players, electric razors, test equipment, etc. Not recommended for large tape recorders and motor driven appliances such as refrigerators, washing machines, etc. Brown Hammerloid case with leather carrying strap. Sizes: DME, 5¼x4¾x2¾"; RME and RMF, 8¾x8x3¾". *Recommended for 24-volt operation. **Check wattage rating of equipment before ordering. RMF/RME Model Inverters equipped with voltage regulator.**

Stock No.	Mfr's Type	Input D.C. Volts	A.C. Output 60 Cycles	Output Watt. Int.	Output Watt. Cont.	Shipping Weight	List Price	Net Price

	220-RME	220	110	150	100	12	82.45	54.95

(1) These Inverters primarily recommended for Edison VP dictating machines. May also be used with Model 200 Sound-scriber (with engine of car not running).
(2) Primarily recommended for Dictaphone's Time Master, DeJur Stenorette, and Gray Audograph dictating machines or other similar types. Also recommended for use with Norelco tape recorder Model EL-3516 and Geloso Model G 255-S tape Recorder.
(3) This Inverter specially designed and recommended also for use with portable TV set.

VIBRATORS

FOR ALL AUTO RADIO SETS SINCE 1954 USE ONE OF THE ATR VIBRATORS LISTED BELOW ... ATR VIBRATORS FEATURE

Ceramic Stack Spacers with Two-Bolt Stack construction.

Instant Starting—as a result of highly efficient magnetic circuit with formed base for more uniform operation on both high and low voltages.

Large Oversize Tungsten Contacts having Full Wiping Action—for greater reliability and longer life.

Perforated Reed of Highest Quality Swedish Spring Steel.

Highest Precision Construction and Workmanship—Practically all parts used are held to within a tolerance of 0.0005 of inch.

Value Plus—as readily evidenced by the Larger Contacts, Ceramic Spacers and Precision Construction and Workmanship. Available in TEN-PAK.

ATR No. 1400 (Bulk), 4-Prong, 6-Volt For All 6-Volt Sets Since 1954

ATR No. 1843 (Bulk), 3-Prong, 12-Volt For All 12-Volt General Motors Since 1954

ATR No. 1843 also used in following automobiles: 1956 Ford (Philco), Lincoln (Bendix), and Mercury (Bendix); 1956 Chrysler (Philco); 1955-57 Packard; 1956-57 Plymouth (Philco); 1956 Studebaker (Philco) and 1957 Mercury (Philco)

ATR No. 1840 (Bulk), 4-Prong, 12-Volt For 12 Volt Cars other Than GM Since 1954

ELECTRONIC TUBE PROTECTOR

A "MUST" FOR EVERY TV HOME! WILL DOUBLE OR TRIPLE THE LIFE OF ALL TYPES OF ELECTRONIC TUBES, INCLUDING TV PICTURE TUBE. Automatic in operation, for use with any electronic equipment having input wattage of 100 to 300 watts. Fuse protected; rugged construction; and enclosed in interior decorator's golden brown hammerloid-finish metal case. Wall Model 250 is 1 - 15/16" OD x 3⅛" in length and plugs directly into wall socket. Shipping weight is 1 lb.

—Wall Model 250

(115 volt A.C.) . . . . . **Net $2.95**

SHAV-PAKS

Every man should have this lightweight ATR Inverter in his car for that "Keep Clean-Shaved Look." Will operate standard A.C. Electric Shavers from your CAR or Boat*. Complete with 3 ft. cord set. Plugs into cigarette lighter receptacle. Fuse protected, rugged construction, and attractively housed in grey hammerloid-finish steel case. Size 4"x2⅜"x 2¾". Shipping weight 2½ lbs.

Model 6-SPB (6 volt) . . . . . **Net $16.50**
Model 12-SPB (12 volt) . . . . . **Net 14.25**

"A" BATTERY ELIMINATOR

FOR DEMONSTRATING AND TESTING TRANSISTOR OR VIBRATOR-TYPE AUTO RADIOS. Designed for testing D.C. Electrical Apparatus on regular 110 volt A. C. lines . . . equipped with full-wave dry disc-type rectifier, assuring noiseless, interference-free operation. Fully Automatic and Fool-Proof; has voltmeter, ammeter, and 8-position voltage control. Fuse protected, and housed in heavy gauge brown hammerloid-finish metal case. 6 ft. cord set included. Size: Model 610C-ELIF, 6½"x9¼"x8½"—shipping weight 22 lbs.; Model 620C-ELIT, 6½"x12¼"x8½"—shipping weight 33 lbs.

IDEAL AS A POWER SUPPLY FOR MODEL RAILROAD TRAINS, RADIO SETS, ELECTRO PLATING OUTFITS, AND OTHER 6 OR 12 VOLT, D.C. EQUIPMENT. MAY ALSO BE USED AS A BATTERY CHARGER.

—Model 610C-ELIF (6 volt at 10 amps. or 12 volt at 6 amps.) . . . . . **Net $65.80**

—Model 620C-ELIT (6 volt at 20 amps. or 12 volt at 10 amps.) . . . . . **Net $87.75**

AUTO PLUG-IN, HOME-TYPE PORTABLE BATTERY CHARGERS

No installation . . . just plug into cigarette lighter receptacle! Makes motor starting easy! Keeps your car battery fully charged in your own garage. Operates directly from standard 110 volt A.C. Household Current. Available in three portable sizes for both 6 or 12 volt cars. Light in weight, rugged in construction, economical, and built to last. Each battery charger is housed in grey hammerloid-finish metal case. Complete with cord sets. Size of G1 is 5¾"x4⅞"x2¾"—shipping weight is 6 lbs.; G2 is 8½"x5½"x3⅞"—shipping weight is 8 lbs.; and G3 is 8½"x5½"x5¼"—shipping weight is 10 lbs.

(G-1) **—Model 612CA4** (4 amp.) 6 or 12 volt . . . . . **Net $19.46**

(G-2) **—Model 612CA6** (6 amp.) 6 or 12 volt . . . . . **Net $22.46**

(G-3) **—Model 612CA10** (10 amp.) 6 or 12 volt . . . . . **Net $27.71**

Illustrates ATR Emergency Lighting and Power Unit, Model ETS complete with lamps.

EMERGENCY LIGHTING and POWER UNIT

Completely Automatic Standby-Power Units Specially Designed to Permit the Instantaneous Continued Operation of Critical Lighting Equipment, PA Systems, Amplifiers, Intercom Systems, Burglar Alarms, Fire Alarms, Synchronous Electric Clocks, Electric Time and Recording Clocks, Incubators, Gas Valves, Telephone and Test Equipment, and Similar Critical Devices in the Event of 115 Volt AC Commercial Power Line Failure. For Use: In Hospitals, Banks, Hotels, Theatres, Factories, Office Buildings, Schools, Homes, and Many Other Areas of Operation.

Type	*Storage Battery Input	A.C. Output 60 Cycles	Output Wattage Int.	Output Wattage Cont.	Net With Lamps
661-ETM	6-volts	110-volts	80	60	$231.75
662-ETS	6	110	100	80	253.50
663-ETH	6	110	150	125	275.50
1232-ETS	12	110	125	100	247.50
1233-ETH	12	110	175	150	267.00
1234-ETJ	12	110	250	200	287.25

For Units Without Lamps Deduct $37.50 Net.

All ATR Inverters Listed Above are Frequency Stable and have Automatic Frequency Control

ACDC Power Supply Modules

acdc
POWER SUPPLIES

JR — Miniaturized Power Supply Modules
Here's the first precision-regulated DC power supply in a truly miniaturized package. You get AC conversion, isolation, and regulation in a package so slim and light you could actually put five of ours into one of theirs. So you can tuck it into impossible spaces. Yet there's only a modest price differential over conventional units, despite JR's drastically improved efficiency.

Stock Delivery

IC — 5V Power Supply Modules for ICs
The application's in the name — if you're in digital ICs, then this unusually complete line of 5VDC power supply modules has been designed especially for you. Performance, too, has been optimized for the end use and we've multi-rated the power output to make IC ideal for you under every possible condition.

Stock Delivery

BX — Precision Power Supply Modules for all Applications
You name it and we'll ship it. From 0 to 28VDC it's off the shelf — higher voltages take just a little longer. When you specify BX, you'll get our best regulated series that's designed to cover every conceivable power supply requirement.

Stock Delivery

OA — Dual Output Power Supply Modules for Op Amps
If you're in op amps, you need power supplies with built-in tracking and long-term stability. That's what you get in our OA line.

Stock Delivery

acdc electronics inc. Oceanside Industrial Center, Oceanside, California 92054, (714) 757-1880

General Specifications

acdc POWER SUPPLIES

Stock Delivery

	JR Miniaturized Power Supply	IC Optimized 5V Modules	BX Precision Modules	OA Dual Output Modules
Input	105-125VAC, 47-420Hz, single phase.	105-125VAC, 47-63Hz (usable also to 400Hz — consult **acdc** for derating). All models of 20A and greater are provided with a 105-125/210-250VAC input.		
Output	Voltage range shown in tables on following two pages is continuously variable between limits by externally accessible screwdriver adjustment of multiturn pot. Output is floating — either positive or negative terminal may be grounded. Current: zero to full load as shown in tables.			
Regulation	0.1% +5mV NL-FL. ±0.1% ±5mV for ±10% input variation.	0.05% for line changes of 10%. 0.05% for NL to FL changes.	0.01% or 0.001 volt for line changes of 10%. 0.01% or 0.002 volt for NL to FL changes.	
Ripple	3mV RMS max (120Hz). 25mV P-P (spikes at 50KHz rep. rate).	2mV RMS and 20mV P-P max.	0.5mV or 0.001% max. RMS (whichever is greater).	
Temperature Stability	Typical 10mV for eight hour period after initial warmup.		Maximum 0.1% or 10mV for eight hour period after initial warmup.	
Transient Response	Typically less than 1 msec in response to an NL-FL step.	Output voltage returns to within regulation limits within 50μsec in response to a 50% step change in load current.		
Remote Sensing	Terminals are provided to maintain regulation at the load, compensating for the DC voltage drop in the load cable.			
Remote Voltage Adjustment	Terminals are provided to adjust the output voltage by means of a remote variable resistor. On the wide range models, in addition to being internally adjustable over the full range, remote programming is possible at an accurately adjustable 1000 Θ/V and a separate zero adjustment is provided. Remote voltage adjustment is not provided on dual output models but may be ordered as a special feature.			
Ambient Temperature	Unit must be mounted to allow conductive heatsinking to hold the case temperature below 80°C.	Operating: Full rated output at operating temperatures of 0° to 71°C without forced air or heatsinking. Storage: —55°C to +85°C.		
Mil Specs	The listed catalog models are constructed with the highest quality components and have MTBF ratings in the neighborhood of 50,000 hours per MIL-HDBK-217. **acdc** will also build supplies to meet specific MIL specs such as MIL-E-4158A, MIL-E-16400, MIL-T-21200, and meet environmental requirements such as MIL-E-5400, MIL-E-5272, MIL-E-4970, and RFI specs MIL-I-26600 and MIL-I-6181. **acdc's** own environmental laboratory is able to perform qualification testing when required and is used extensively to prove out designs. In order to provide the most efficient design, customer inquiries are invited, outlining exact specifications and environmental conditions required for the end product.			
Weight	Approx. 1½ lbs.	4 to 83 lbs. Weight for individual models is given in the tables on the following two pages.	1.6 to 46 lbs.	4 to 11 lbs.
Mounting	Fits into 1¾" rack panel assembly.	Unit can be mounted in any position on either one of two sides. Mounting faces have threaded mounting holes.		
Dimensions	H-W-L dimensions for individual models are given in the tables on the following two pages.			
Overload Protection	All models are inherently protected against overload and short circuits of any duration. Except for certain higher voltage units, no fuses or reset buttons are used — automatic recovery is electronically accomplished. On higher voltage units, short circuit protection is furnished by means of an accessible, replaceable fuse.			
Overvoltage Protection (Optional)	A completely independent overvoltage protection module is available and straddles the output terminals. This protection does not depend on the regulating circuitry of the supply. Trip voltage adjustable from 5-30 volts.	Any model, up to 50 volts, can be furnished with overvoltage protection which "crowbars" the output in the event of a rise in the output voltage of 10% or 2 volts (whichever is greater). On dual models, overvoltage protection "crowbars" both voltages to near zero in the event of a rise of one or both of the voltages of 20% or 4 volts (whichever is greater).		
Connector	All cases have barrier strip termination.		Cases A through F are supplied with a solder hook terminal header. Case M1 is furnished with an attached 10 terminal PC edge connector which may be used either as a solder connection or readily removed by the user and mounted in his equipment to provide plug-in convenience. G and H cases have barrier strip termination.	
Construction	Black anodized aluminum case. Unit may be removed from case for complete serviceability.	Modules are constructed of heavy gage aluminum with integral extruded heatsinks; color is black. Removable covers of perforated steel have a light gold enamel finish. Regulating circuitry is mounted on a PC board.		
Output Impedance	(See Regulation and Transient Response).	DC — 1KHz 0.001 R_L or 0.005 ohm max. 1-100KHz 0.005 R_L or 0.3 ohm max (whichever is greater). R_L = rated load.	DC — 1KHz 0.0001 R_L or 0.001 ohm max. 1-10KHz 0.0003 R_L or 0.01 ohm max. 10-100KHz 0.006 R_L or 0.3 ohm max. (whichever is greater). R_L = rated load.	
Temperature Coefficient	0.02%/°C max.	1mV/°C max.	Maximum .015% or 1mV/°C.

Other ACDC Power Supply Modules

acdc POWER SUPPLIES

BC — This series of DC power supply modules has 0.5% regulation. 15 voltage ranges 2 to 28VDC, each available in six current ratings from 300mA to 20A. Available from stock.

0.3A	$ 73.00	5.0A	$178.00
1.2	$111.00	10.0	$265.00
2.5	$132.00	20.0	$384.00

30 to 400VDC Modules — Both the BC (0.5% regulation) and the BX series (0.01% regulation) are offered in 22 voltage ranges to meet 30 to 400VDC precision requirements. The 11 ranges from 30 to 50VDC are available with 0.3, 1.2, 2.5, and 5.0A current ratings. Those from 60 to 100VDC are made with 0.1, 0.4, 0.6, and 1.2A ratings. An additional 0.2A rating is offered in the 100VDC range. The 150, 200, 250, 300, 350, and 400VDC range modules are rated 0.1, 0.2, 0.4, and 0.6A. Prices range from $82.00 to $282.00.

Wide Range Programmable Modules — These unique ACDC modules are adjustable from zero to full output voltage and will deliver rated current at all voltages. A screwdriver makes both the fine and coarse voltage controls easily accessible. May be used with an external programming resistor. In the 0 to 25VDC range, available with 0.1, 0.4, 1.2, and 2.5A ratings. In the 0 to 50VDC range, the ratings are 0.1, 0.2, 0.6, and 1.2A. From $119.00 to $178.00.

Dual Output Modules — ACDC's BX and BC series are also available to meet dual output requirements, in 25 ranges from ±2 to ±50VDC. Each range is offered in four current ratings from 300mA to 2.5A. From $154.00 to $275.00.

Warranty

When used within its specified operating environments, ACDC power supplies are unconditionally guaranteed to meet all published specifications for an unlimited length of time. This guarantee covers all parts of the module, including semi-conductors, fuses, and mechanical parts, without regard to the date of purchase or installation. All terms of this guarantee are fully transferable when the power supply is sold as original equipment.

If at any time the power supply is in need of warranty service or calibration it may be returned directly to the factory where, without charge, it will be adjusted to meet its original specifications. ACDC will pay surface freight charges to and from the factory.

Rack Assemblies

acdc
POWER SUPPLIES

New from ACDC! Universal 19″ Rack Adapters for mounting any ACDC power supply. Available in 3½″, 5¼″, or 7″ high and 14″ or 21″ deep. There are no holes to drill, just assemble the power supply mounting plates with the hardware furnished with each Rack Adapter. Front panels are finished in grey enamel and the chassis is cadmium plated. Panel options range from blank front panels to metered control panels.

The 3½″ and 5¼″ Rack Adapters provide an enclosed wire trough located in the center of the chassis. Feed-through barrier strips can be installed on the back panels to simplify cable terminations. Two cable entrance holes are also provided on each Rack Adapter.

The Switch Panels contain Line Switch, Red Pilot Light and a Fuse Holder. The 3½″ Metered Panels provide Line Switch, Red Pilot Light, Fuse Holder, and 1½″ Voltmeter and Ammeter. The 5¼″ and 7″ Metered Panels have in addition two Selector Switches and are designed to monitor two outputs. Buttoned holes allow for customer's installation of remote voltage adjust pots.

When ordering, specify the desired Rack Adapter and specify the number and types of cases which are intended to be accommodated (this provides you with the required special mounting plates and recommended installation drawing shipped free with your order). Choose the desired front panel or panels and possibly a set of slides.

ACDC Case / Rack Chart

The following line-up lists the cases that can be accommodated in each rack adapter. Contact your ACDC representative or the factory for exact total module capacity of each adapter.

A-MP★ SOLID STATE HIGH VOLTAGE POWER CONVERSION

FOR COMMERCIAL AND MILITARY APPLICATIONS

The CAPITRON Division of AMP Incorporated has complete in-house facilities for designing and manufacturing power assemblies, including metal forming, printed circuit board fabrication, magnetics winding, encapsulating, and environmental testing. In addition, the use of AMPLIFILM★ capacitor products enables CAPITRON engineers to design higher power into smaller packages for both military and commercial applications.

Solid state and conventional units are characterized by tight regulation, low ripple voltage, and dense, rugged construction. All are pre-engineered to specific customer requirements.

The rack and panel mounted multiple output supply shown is intended for use in normal office environments. All output voltages and current are read from a single panel meter. All voltages are short-circuit proof and a system malfunction will turn off the 17 KV output until it is reset.

A unique feature is the operation of the "power present" indicators: Low input line voltage turns off logic circuits, all supplies and indicators; high output voltage from any supply turns off logic, but not output power; overcurrent from any supply turns off its logic and its indicator.

SPECIFICATIONS:

Adjustable outputs	17 KV, 1 KV
Fixed output	400 V
Current ranges	0.1 to 1 ma
Regulation	.01% to 1%
Ripple	.05%

Also available are special purpose power supplies for CRT, Energy Storage, Laser, Traveling Wave Tube and Programmable applications. The CAPITRON Division is equipped to satisfy special design requirements on short notice.

★Trademark of AMP Incorporated

MORE POWER TO

LOW VOLTAGE POWER SUPPLIES

A typical multiple output type, this unit is not only short circuit proof between any output and ground, and between all outputs, but provides automatic overvoltage / undervoltage shutdown and output current limitation to 150% of rated value. All outputs are isolated with respect to the input, and the unit meets RFI requirements of MIL-I-6181.

Input: 20-29 VDC
Outputs:
300 VDC ±2% @ 70 ma.
250 VDC ±2% @ 150 ma.
55 VDC ±2% @ 220 ma.
22 VDC ±2% @ 800 ma.
6 VDC ±2% @ 10 ma.
–0.5 VDC nom. @ 10 ma. (ext. adj. from +.0.2 to –1.4 VDC)
–20 VDC ±2% @ 25 ma.
–150 VDC ±2% @ 180 ma.

Regulation: ±1.0% line and load
Ripple: 0.017% pk-pk
Altitude: 10,000 ft. (operational)
Temperature: –54° to +55° C
Shock Vibration: MIL-E-5400
Size: 8" x 8" x 5"
Weight: 19 lb. max.

HEADS-UP CRT POWER SUPPLIES

Ripple: .05%
Regulation: ±0.1%
Volume: less than 50 cu. in.
Weight: 3¼ lbs.
Temperature: —55°C to 110°C
MIL-E-5400

Input: 115 V, 400 cps MIL-STD-704
Outputs:
15 KVDC, 400 μa pk.
1.7 KV (adj. 1.4 to 2.0 KV), +30 μa to —30 μa
300 VDC, +15 μa to —15 μa

AIRBORNE RADAR SYSTEMS AND COMPONENTS

TYPICAL AIRBORNE RADAR POWER CONVERSION SYSTEM

A compact 4-module pulse system with extremely good heat sinking and klystron filament voltage regulation between 7.35 and 7.75 volts at 2 to 2½ amps. Maximum pulse ripple is only 1.0%. The largest unit is approximately ½ cu. ft. in size and weighs less than 12 lbs.

Pulse Modulator for Airborne Radar

This oil-filled pulse modulator is designed to drive the V-24 klystron family. Offering maximum power (300 KW peak) for minimum size, it has excellent square wave characteristics, providing pulses of long duration for the required repetition rate. A unique heat sinking technique effectively removes 400 watts of heat, permitting operation at 107°C ambient temperature. The package also supplies klystron input voltage variation tightly regulated to 9 +.5V/–0V with variations in temperature from –7 to 107°C, filament power from 107.5 to 119.5 volts, load current from 2 to 2.5 amps, and input frequency from 380 to 420 cps.

Performance Specifications

Input: 5 KVDC ±.25 KVDC @ 510 ma.
Output: 40 KV @ 7½ amps. 1800 pps for search followed by 2235 pps. for indefinite duration
Pulse: 2.1 μsec. read at 100% amplitude; 0.5 μsec. rise time; 0.9 μsec. fall time; 1.5% max. ripple; 10% max. backswing
Ambient Temperature: –7° C to +107° C (operational); –60° C to 121° C (storage)
Size: 10¼" x 4¾" x 5⅞"
Weight: 26 lbs. max.

ABBOTT POWER MODULE

The Next 20 Pages List 2700 Regulate Modules with Specifications and Price

The most complete line of small size MIL-SP type power modules available in the industry is f described in the following 20 pages. The Abb line of power modules includes output volta from 5 volts to 10,000 volts DC, output curr from 2 milliamperes to 20 amperes and out power from 1 watt to 300 watts. Sizes, weig regulations and environments are shown for various input and output powers. Abbott is pr to list two completely new lines of power modu this year: 400 Hz to DC and DC to DC high-p formance modules. Optional features are shown the last page. Look through the next 20 pages you may find the power module you want i standard Abbott model.

See Abbott's 1970 catalog for complete information on all our products plus additional items such as:

- Quality Control System
- Thermal Data
- Input Currents
- Overvoltage Protectors
- Input Line Filters
- Operating Hints
- Reliability & MTBF
- EMI/RFI
- MIL Spec Environments

To receive your free copy of this comprehensive 76 page Power Supply Catalog, simply call or write Abbott.

VOLTAGE AND CURRENT
ific models listed on next page

ULATION
or 10 mv (whichever is greater) for input change of 105-125 VRMS

GULATION
or 10 mv (whichever is greater) for change from no load to full load

E
r 5 mv RMS (whichever is greater)

VOLTAGE ADJUSTMENT
is continuously adjustable between the limits shown in table by an externally accessible screwdriver adjustment potentiometer

ENT RESOLUTION
ax. for outputs 5 thru 16 VDC; 50 mv max. for outputs 18 thru 50 VDC
av for outputs 55 thru 95 VDC

N VOLTAGE
between output terminals and chassis ground

ON RESISTANCE
hms between output terminals and chassis ground when measured at DC

d outputs are isolated; either positive or negative side may be grounded

TURE
: −4°F (−20°C) to +160°F (+71°C) without derating, forced air, inking. Storage: −67 to +185°F

TURE COEFFICIENT
er degree Centigrade

eet above sea level

IRCUIT PROTECTION
t is completely protected against an overload or short circuit of any The output voltage automatically restores to normal when the is removed

RANSIENT PROTECTION
for 0.1 sec in accordance with MIL-STD-704A, figure 3, limit 1

ANSIENT RECOVERY TIME
oltage returns to regulation limits within 75 microseconds after a p change in load current

ERROR SENSING
t contains a means by which the regulator circuit monitors the voltage at the load using extra "sensing" leads. The resulting circuit action ates for a DC voltage drop up to 0.5 volts in the load leads.

OPERATION
nore power supplies can be operated in series so that the output volt- the supplies are additive. Total output voltage is not to exceed 200 VDC

IMPEDANCE
Hz — 0.003 R_L or 0.03 ohms max., whichever is greater.
10K Hz — 0.008 R_L or 0.08 ohms max., whichever is greater.
o 100K Hz — 0.015 R_L or 0.30 ohms max., whichever is greater.
ted load resistance.

LITY
n time between failure (MTBF) per MIL-HDBK-217 under worst case g conditions of full output current, max. input voltage, and +160°F is 22,026 hrs. for 20 amp models, increasing to 47,281 hrs. for 0.15 dels. At +104°F ambient, the MTBF increases to 63,898 hrs. and hrs., respectively (Consult factory for complete reports)

NG
d inserts are provided on two surfaces for versatile mounting of cases h F (see case drawings).

MODEL DESIGNATION (For Model "R" series only)

For your assistance and understanding, we have included a complete explanation of our model designation for this series of units, using Model **R28S2.5-14** as an example.

R Designates the general series of the power supply.

28 Designates the nominal output voltage of the unit.

S Designates the output connector as follows:
- S — 8 pin solder hook terminal. Standard on all units with case size A through F.
- T — Terminal strip. Standard on all units with case size G through J.
- P — Octal plug. Optional on case sizes A through F at $10 for one piece and $5 each for two to four pieces.
- C — Cannon connector MS3112E-16-8P with mate. Optional on case sizes A through F at $30 for one piece and $20 for two to four pieces.

2.5 Designates the continuous full load output current.

14 Designates the inclusion of the desired optional features. For a list of the features available, and their numbers, please see the "Optional Features" section for Model R series, below. For example, R28S2.5-14 designates a 60 Hz to 28 VDC at 2.5 amps unit using an 8 pin solder hook terminal, having the optional features "overvoltage protection" and "remote voltage adjustment"

OPTIONAL FEATURES (For Model "R" series only)

To include the optional features desired in the power supply, simply add a dash and the feature number to the end of the model number. (See "Model Designation" section above.)

Feature	Description	Feature Number	Price 1 pc.	Price 2-4 pcs.
Overvoltage Protection	If the output voltage rises 10% or 2V WIG above the nominal setting, the overvoltage protection circuitry reduces the voltage to approximately 1 volt within 15 microseconds. Under worst case conditions the output voltage could rise an additional 10% max during this 15 microsecond period.	1	$30	$20
Connector Location	The output connector can be supplied on the surface labeled "Optional Location" on the dimensional drawing for case size B through F.	2	10	5
230 VAC Operation	Units can be modified to operate with an input voltage of 210 to 250 VRMS, 50 to 420 Hz.	3	20	10
Remote Voltage Adjustment	Provision is made for locating an adjustment potentiometer in a remote location from the power supply.	4	20	10
Output Voltage Resolution	Provisions can be made to increase the output voltage adjustment resolution as follows: **Nominal Output Voltage / Resolution**: 5V through 16V — 1.5 mv max.; 18V through 50V — 3.0 mv max.; 55V through 95V — 5.0 mv max.	5	20	10
Parallel Operation	Units can be modified for parallel operation providing: a) Each unit has the same output voltage. b) Output current of each unit is derated 20%.	6	20	10

LABORATORIES, INCORPORATED
5200 W. Jefferson Blvd. / Los Angeles 90016
(213) WEbster 6-8185 Cable: ABTLABS

abbott 60 ∼ to DC (Reg.) Hermetically Sealed

POWER MODULES

features

- Close regulation
- 5 to 10,000 volts
- Hermetically sealed
- Compact
- Low ripple
- For aerospace application

specifications

Input Voltage and Frequency
105-125 VAC, 55-65 Hertz, 1 phase, per MIL-STD-704A, Category B

Line Regulation
±0.2% for input 105-125 VAC on Model V's, HA's, HAL's and HC's
±0.5% for input 105-125 VAC on Model HAK's, HCK's and HN's

Voltage Regulation
±0.5% — for input 105-125 VAC and from ½ load to full load on Model V's
±1.5% — for input 105-125 VAC and from ½ load to full load on Model HA's
±2.5% — for input 105-125 VAC and from ½ load to full load on Model HAK's, HAL's, HC's and HN's

Ripple
0.2% RMS — Model V's
0.5% RMS — Model HA's
1% RMS — Model HAK's, HAL's and HC's
2% RMS — Model HN's

Short Circuit Protection
Protected against overload and sho circuit conditions

Voltage Adjustment Range
12% by screwdriver adjustment

Reliability
80,000 hours MTBF typical per Mil HDBK-217 under worst case opera ing conditions

Environment
+160°F max. at mounting bas using adequate heat sink
−4°F (−20°C) min. at mountin surface
Altitude: to vacuum (true hermet seal)
Vibration, shock, sand, dust, humi ity, salt spray, fungus, sunshin rain, and explosion to MIL-E-5272

Output Voltage and Current
See specific models listed
(Outputs and inputs are isolate

Output Voltage Range	Output Current (Amps)	Size (See Dwg.)	Wt. lbs.	Model Number	Price 1 pc.	Price 2-4 pcs.

IONAL TOLERANCES: FRACTIONS ±1/32; DECIMALS .XX ±0.015.

* Used only on outputs 740-3650 volts; On outputs above 3650 Dia. is 3/4, Height 1 1/2.

To have the header located on the mounting base, change the model number character preceding the first dash of Model Number to "B". (Example: V05B-5A indicates a header out the base.) See page 949. No increase in price for this service.

60 HERTZ TO DC (Regulated)

INPUT VOLTAGE: 115 VAC, 60 Hz, 1 PHASE

For no load operation, add a resistance on the output to draw a minimum 4% of the rated current.

abbott transistor
LABORATORIES, INCORPORATED
5200 W. Jefferson Blvd. / Los Angeles 90016
(213) WEbster 6-8185 Cable: ABTLABS

abbott 400 ∼ to DC (Regulated)

POWER MODULES

features

- Close regulation
- 5 to 10,000 volts
- Hermetically sealed
- Compact, low cost
- Low ripple
- For aerospace application

Input Voltage & Frequency
105-125 VAC, 380-420 Hertz, 1 phase, per MIL-STD-704A, Category B.

Line Regulation
±0.2% for input 105-125 VAC on Model T's, GA's, GAL's, and GC's
±0.5% for input 105-125 VAC on Model GAK's, GCK's and GN's

Voltage Regulation
±0.5% — for input 105-125 VAC and from ½ load to full load on Model T's
±1.5% — for input 105-125 VAC and from ½ load to full load on Model GA's
±2.5% — for input 105-125 VAC and from ½ load to full load on Model GAK's, GAL's, GC's and GN's

Ripple
0.2% RMS — Model T's
0.5% RMS — Model GA's
1% RMS — Model GAK's, GAL's and GC's
2% RMS — Model GN's

Short Circuit Protection
Protected against overload and circuit conditions

Voltage Adjustment Range
12% by screwdriver adjustme

Reliability
140,000 hours MTBF typical MIL- HDBK-217 under worst operating conditions

Environment
+160°F max. at mounting using adequate heat sink.
−65°F min. at mounting su
Altitude: To vacuum (true her seal)
Vibration, shock, sand, dust, h ity, salt spray, fungus, sun rain, and explosion to MIL-E- and MIL-E-5400K, Class 1

Output Voltage & Current
See specific models listed
(Outputs and inputs are isolate

For no load operation, add a resistance on the output to draw a minimum 4% of the rated current.

abbott transistor
LABORATORIES, INCORPORATED
5200 W. Jefferson Blvd. / Los Angeles 90016
(213) WEbster 6-8185 Cable: ABTLABS

abbott 400 ~ to DC (Reg.) Hi-Temp.

POWER MODULES

features

- Hi-temp. +212°F.
- 5 to 3500 volts
- Hermetically sealed
- Compact, low cost
- Low ripple
- For aerospace application

specifications

Input Voltage & Frequency
105-125 VAC, 380-420 Hertz, 1 phase, per MIL-STD-704A, Category B

Line Regulation
±0.2% for input 105-125 VAC on Model U's, GB's and GBL's
±0.5% for input 105-125 VAC on Model GBK's

Voltage Regulation
±0.5%—for input 105-125 VAC and from ½ load to full load on Model U's
±1.5%—for input 105-125 VAC and from ½ load to full on Model GB's
±2.5%—for input 105-125 VAC and from ½ load to full load on Model GBK's and GBL's

Voltage Adjustment Range
12% by screwdriver adjustment

Ripple
0.2% RMS—Model U's
0.5% RMS—Model GB's
1% RMS—Model GBK's, and GBL's

Short Circuit Protection
Protected against overload and short cir conditions

Reliability
70,000 hours MTBF typical per MIL-HD 217 under worst case operating condit

Environment
+212°F max. at mounting base using quate heat sink
−65°F min. at mounting surface
Altitude: To vacuum (true hermetic sea
Vibration, shock, sand, dust, humidity, spray, fungus, sunshine, rain, and explo to MIL-E-5272C and MIL-E-5400K, Clas

Output Voltage & Current

For no load operation, add a resistance on the output to draw a minimum 4% of the rated current.

abbott transistor
ORATORIES, INCORPORATED
5200 W. Jefferson Blvd. / Los Angeles 90016
(213) WEbster 6-8185 Cable: ABTLABS

abbott 400 ~ to DC Hi-Performance

FEATURES

- Low Peak-to-Peak Ripple
- RFI/EMI to MIL-STD-461
- Small
- Hermetically Sealed
- +100°C Operation
- ±0.05% Regulation

DELIVERY FROM STOCK*

SPECIFICATIONS

INPUT VOLTAGE RANGE: 105 to 125 VRMS

INPUT FREQUENCY RANGE: 380 to 420 Hertz, 1 phase

INPUT POWER: Per MIL-STD-704A for category B equipment

OUTPUT VOLTAGE AND CURRENT: See specific models listed in table

LINE REGULATION: ±0.05% or 10 mv (whichever is greater) for input change of 105 to 125 VRM load constant

LOAD REGULATION: ±0.05% or 20 mv (whichever is greater) for change from no load to full loa line constant

RIPPLE: 0.02% or 5 mv RMS (whichever is greater) 25 mv peak to-peak maximum

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown in the ta means of an externally accesible screwdriver adjustment potentiometer

ADJUSTMENT RESOLUTION:

Nom. Output Voltage	Resolution
5 - 16 vdc	35 mv
18 - 50 vdc	60 mv
55 - 95 vdc	90 mv

ISOLATION VOLTAGE: 750 vdc input to output and input to case • 200 vdc output to case

INSULATION RESISTANCE: 50 megohms minimum between input and output, input and case, and outp case when measured at 50 vdc

POLARITY: Inputs and outputs are isolated, either positive or negative side may be grounded.

TEMPERATURE RANGE: Operating: −55° to +100°C maximum at center of mounting base
Storage: −55°C to +125°C

TEMPERATURE COEFFICIENT: 0.03% per degree centigrade maximum

ENVIRONMENT: Encapsulated to meet the environmental requirements of MIL-E-5272C and MIL-E-5400K 2, including: altitude (to a vacuum), vibration, shock, acceleration, sand, dust, humidity, salt spray, explosion, etc.

SHORT CIRCUIT PROTECTION: Each unit is completely protected against an overload or short circuit duration. The output voltage automatically restores to normal when the overload is removed

INPUT TRANSIENT PROTECTION: MIL-STD-704A Figure 3, Limit 1 (180 VAC for 0.1 seconds)

OVER VOLTAGE PROTECTION: Over voltage protection modules are available for these units. Please the factory.

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 100 micros after 50% step change in load current

SERIES OPERATION: Two or more power supplies can be operated in series so that the output vol the supplies are additive. Total output voltage is not to exceed 200 vdc

OUTPUT IMPEDANCE:
DC to 1K Hz — 0.004 R_L or 0.04 ohm max.
1K Hz to 10K Hz — 0.015 R_L or 0.15 ohm max.
10K Hz to 100K Hz — 0.030 R_L or 0.50 ohm
R_L = Rated Load

ELECTROMAGNETIC INTERFERENCE: Built to meet the requirements of MIL-STD-461 for generation susceptability to radiated and conducted interference

RELIABILITY: The Mean Time Between Failure (MTBF) per MIL-HDBK-217 under worst case operating co of full rated output current, 125 vac input voltage, and +100°C base plate temperature, range 47,393 hours for Model W95D0.3 to 56,148 hours for Model W5D10.

POWER MODULES

features

- −4° to +160°F ambient
- 115, 220 and 440 VRMS Models
- 30 to 240 VA
- All Silicon
- High Reliability
- Short Circuit Protection
- Reverse Polarity Protection
- Close Regulation

specifications

Input Voltage Range
11-13 VDC on 'K' Models
22-26 VDC on 'P' Models

Load Regulation
±1% for load change of ½ load to full load

Line Regulation
±0.2% for specified input voltage range

Output Frequency
Adjustable between 55 and 65 Hz by screwdriver adjustment

Frequency Stability
±1% from −4°F to +160°F
±1% over eight hour period at constant temperature

Wave Form
Sinusoidal, with maximum distortion into a resistive load as shown in table below.

Synchronization
Terminals are provided for external synchronization. Input of 6.3 vrms ±20%, 55 to 65 Hz required

Load Power Factor
Full rated output VA from unity to 0.7 PF lagging or leading

Efficiency
45% minimum on 'K' Models at nominal input voltage. 50% minimum on 'P' Models at nominal input voltage

Operating Temperature
−4°F to +160°F ambient without derating, forced air, or heatsinking

Altitude
10,000 feet above sea level

Input Transient Protection
45 VDC for 0.1 seconds

Output Voltage and Power
See specific Models listed in the table below

DIMENSIONAL TOLERANCES: FRACTIONS ±1/32; DECIMALS .XX ±0.015.

† To have the header located on the mounting base, change the mod ber character preceding the first dash of Model Number to "B". (E N3B-115A-400 indicates a header out the base.) See page 949. No inc price for this service.

abbott DC to Sine Wave 1ϕ Hi-Temp.

POWER MODULES *specifications*

features

- Close regulation
- 400 to 1600 Hertz
- Hermetically sealed
- High Reliability
- Compact
- For aerospace
- Short circuit protected

Input Voltage Range
24 to 30 volts DC

Line Regulation
±0.2% change of output voltage for input 24-30 VDC

Load Regulation
±0.5% from ½ load to full load

Frequency Stability
±1%

Voltage Adjustment Range
12% by screwdriver adjustment

Input Transient Protection
In accordance with MIL-STD-704A, Limit 1, Category B (80 volts for 0.1 sec.)

Short Circuit Protection
Standard on all Models

Reliability
55,000 hours MTBF typical per MIL-HDBK-217 under worst case operating conditions

Environment
+212°F max. at mounting base, using adequate heat sink
−65°F min. at mounting surface
Altitude: to vacuum (true hermetic seal)
Vibration, shock, sand, dust, humidity, salt spray, fungus, sunshine, rain, and explosion to MIL-E-5272C and MIL-E-5400K, Class 2

Output Voltage, Current and Frequency
See specific models listed below
(Outputs and inputs are isolated)

DC TO SINE WAVE (1ϕ) HI-TEMP.

INPUT VOLTAGE RANGE: 24 TO 30 VOLTS DC

Output Frequency (Hertz)	Output Voltage Range	Output Power (Volt-Amps)	Harmonic Distortion (%)	Size (See Dwg.)	Weight (Lbs.)	Model Number	Price 1 Pc.	Price 2-4 Pcs.

abbott transistor
ORATORIES, INCORPORATED

5200 W. Jefferson Blvd. / Los Angeles 90016

(213) WEbster 6-8185 Cable: ABTLABS

abbott 28 VDC to DC (Regulated)

POWER MODULES

features

- Close regulation
- 5 to 10,000 volts
- Hermetically sealed
- Short circuit protection
- Compact, low cost
- Input spike protection

specifications

Input Voltage Range
24 to 30 volts DC

Line Regulation
±0.2% for input 24 to 30 VDC on Model A's, AL's and C's
±0.5% for input 24 to 30 VDC on Model AK's, AN's and CK's

Voltage Regulation
±1.5% for input 24 to 30 VDC and from ½ load to full load on Model A's
±2.5% for input 24 to 30 VDC and from ½ load to full load on Model AK's, AL's, AN's and C's

Ripple
0.5% RMS — Model A's
1.0% RMS—Model AK's, AL's and C's
2% RMS — Model AN's

Voltage Adjustment Range
12% by screwdriver adjustment

Input Transient Protection
In accordance with MIL-STD-7
Limit 1, Category B (80 volts
0.1 sec.)

Reliability
150,000 hours MTBF typical
MIL-HDBK-217 under worst case
erating conditions

Environment
+160°F max. at mounting
using adequate heat sink
−65°F min. at mounting surfa
Altitude: to vacuum (true herr
seal)
Vibration, shock, sand, dust, hu
ity, salt spray, fungus, suns
rain, and explosion to MIL-E-5
and MIL-E-5400K, Class 1

NIONAL TOLERANCES: FRACTIONS ±1/32; DECIMALS .XX ±0.015.

* Used only on outputs 740-3650 volts; On outputs above 3650 Dia. is ¾, Height 1½.

‡ 6-32 THD x 3/16 DEEP (TYP) FOR MODELS AL02 AND A02

† To have the header located on the mounting base, change the model number character preceding the first dash of Model Number to "B". (Example: AL05B-5A indicates a header out the base.) See page 949. No increase in price for this service. Not available on Model A02 series.

DC TO DC INPUT VOLTAGE RANGE: 24 TO 30 VOLTS, DC

Output Voltage Range	Output Current (Amps)	Size (See Dwg.)	Wt. lbs.	Model Number	Price 1 pc.	Price 2-4 pcs.

TE For no load operation, add a resistance on the output to draw a minimum 4% of the rated current.

abbott 28 VDC to DC (Reg.) Hi-Temp.

POWER MODULES

features

- Hi-temp. +212°F.
- 5 to 3500 volts
- Hermetically sealed
- Short circuit protection
- Input spike protection

specifications

Input Voltage Range
24 to 30 volts DC

Line Regulation
±0.2% for input 24 to 30 VDC on Model B's and BL's
±0.5% for input 24 to 30 VDC on Model BK's

Voltage Regulation
±1.5% for input 24 to 30 VDC and from ½ load to full load on Model B's
±2.5% for input 24 to 30 VDC and from ½ load to full load on Model BK's and BL's

Ripple
0.5 RMS — Model B's
1.0% RMS — Model BK's and BL's

Voltage Adjustment Range
12% by screwdriver adjustment

Input Transient Protection
In accordance with MIL-STD-704A, Limi
Category B (80 volts for 0.1 sec.)

Reliability
120,000 hours MTBF typical per MIL-HI
217 under worst case operating condit

Environment
+212°F max. at mounting base using
quate heat sink
−65°F min. at mounting surface
Altitude: To vacuum (true hermetic s
Vibration, shock, sand, dust, humidity,
spray, fungus, sunshine, rain, and explo
to MIL-E-5272C and MIL-E-5400K, Class

Output Voltage and Current
See specific models listed
(Outputs and inputs are isolated)

Output Voltage Range	Output Current (Amps)	Size (See Dwg.)	Wt. lbs.	Model Number	Price 1 pc.	Price 2-4 pcs.

NOTE: For no load operation, add a resistance on the output to draw a minimum 4% of the rated current.

abbott transistor LABORATORIES, INCORPORATED
5200 W. Jefferson Blvd. / Los Angeles 90016
(213) WEbster 6-8185 Cable: ABTLABS

abbott 28 VDC to DC Hi-Performance

FEATURES

- Low Peak-to-Peak Ripple
- RFI/EMI to MIL-STD-461
- Small
- Hermetically Sealed
- +100°C Operation
- ±0.05% Regulation

DELIVERY FROM STOCK*

SPECIFICATIONS

INPUT VOLTAGE RANGE: 24 to 30 vdc.

LINE REGULATION: ±0.05% or 10 mv (whichever is greater) for input change of 24 to30 vdc with load consta

LOAD REGULATION: ±0.05% or 20 mv (whichever is greater) for load change of no load to full load v line constant.

RIPPLE: 0.02% or 5 mv RMS (whichever is greater) 50 mv peak-to-peak maximum.

OUTPUT VOLTAGE ADJUSTMENT: Voltage is continuously adjustable between the limits shown in the table means of an externally accessible screwdriver adjustment potentiometer.

ADJUSTMENT RESOLUTION:

Nominal Output Voltage	Resolution
5 thru 16 vdc	35 mv max.
18 thru 50 vdc	60 mv max.
55 thru 95 vdc	90 mv max.

ISOLATION VOLTAGE: 200 volts DC between input and output, input and case, and output and case.

INSULATION RESISTANCE: 50 megohms minimum at 50 volts DC between input and output, input and c and output and case.

POLARITY: Inputs and outputs are isolated; either positive or negative side may be grounded.

TEMPERATURE RANGE: Operating: −55°C to +100°C maximum at center of mounting base.
Storage: −55°C to +125°C.

TEMPERATURE COEFFICIENT: 0.03% per degree centigrade maximum.

ENVIRONMENT: Encapsulated to meet the environmental requirements of MIL-E-5272C and MIL-E-5400K, C 2, including altitude (to a vacuum), vibration, shock, acceleration, sand, dust, humidity, salt spray, fun explosion, etc.

SHORT CIRCUIT PROTECTION
Each unit is completely protected against an overload or short circuit of any duration. The output vol automatically restores to normal when the overload is removed.

INPUT TRANSIENT PROTECTION: MIL-STD-704A, Limit 1, Category B (80 volts for 0.1 sec.).

OVER VOLTAGE PROTECTION: Over voltage protection modules are available for use with these units. Pl consult the factory.

LOAD TRANSIENT RECOVERY TIME: Output voltage returns to regulation limits within 100 microsec after a 50% step change in load current.

SERIES OPERATION: Two or more power supplies can be operated in series so that output voltage of supplies are additive. Total output voltage is not to exceed 200 vdc.

OUTPUT IMPEDANCE:
DC to 1 K Hz — 0.004 R_L or 0.04 ohm max.
1K Hz to 10K Hz — 0.015 R_L or 0.15 ohms max.
10K Hz to 100K Hz — 0.030 R_L or 0.50 ohms
R_L = Rated Load.

ELECTROMAGNETIC INTERFERENCE: Built to meet the requirements of MIL-STD-461 for generation of susceptability to radiated and conducted interference.

RELIABILITY: The mean time between failure (MTFB) per MIL-HDBK-217 under worst case operating co tions of full rated output current, 30 vdc input voltage, and +100°C base plate temperature, ranges 41,305 hours for Model C5D10 to 55,463 for Model C95D0.25.

abbott OPTIONAL FEATURES

EXCEPT FOR MODELS BEGINNING WITH 'C', 'K', 'P', 'R', AND 'W'

TRMINALS ON MOUNTING BASE (B Option)

electrical terminals extending rough a glass sealed header may be ard on the mounting base on most units at no increase in price. To e this feature, simply change the number character preceding the lash to "B". (Example: V05B-5A in-s a header out the base.)

only on outputs 740-3650 volts; Not available unting base above 3650 volts.

NCES: FRACTION = ±1/32 • DECIMAL = ±0.015

	1 PIECE	2-4 PIECES

CIAL CONNECTORS (A & C Option)

Mitary type hermetically sealed connector is available on Abbott power modules with tput voltage of up to 740 volts. A special high voltage ceramic connector, manufac-by Amp, Inc., is available on power modules with an output voltage above 3650 volts. ly change the model number character preceding the first dash to "A" to have the ector extend out the top surface (opposite the mounting base), or to a "C" to have it d out the mounting base. Example: V05A-5A indicates a connector out the top surface V05C-5A indicates a connector out the mounting base.

CONNECTOR	MANUFACTURER	MATING PART		
MS311H-12-10P	Bendix or Cannon	MS3116F-12-10S	$ 30.00	$ 20.00
833589	Amp	832692-2 (2 ft. leads)	$ 60.00	$ 40.00

EMOTE OUTPUT ADJUSTMENT (R Option)

sion for locating an adjustment potentiometer in a remote location from the power ly can be made. To have this feature included, simply add an "R" after the character ding the first dash of the model number. Example: V05DR-5A indicates the remote ut adjustment feature has been included. Special terminal arrangement includes two ional terminals for connection to any remote 1000 ohm potentiometer.

$ 30.00 | $ 20.00

CIAL ENCAPSULATION (E Option)

f our hermetically sealed power modules are encapsulated to meet or exceed the shock, eleration, and vibration requirements of MIL-E-5272C. Special encapsulation to enable e modules to withstand shock levels of 60 g's, acceleration levels of 50 g's, and vibra-levels of 30 g's, is available. To have this feature included, simply add an "E" after character preceding the first dash of the model number. Example: V05DE-5A indicates ial encapsulation has been included.

$ 20.00 | $ 10.00

POWER SUPPLY HOTLINE: 215-258-5441

Any of 82,000 different DC power supply modules...
Shipped in just 3 days!

Depend on Acopian for guaranteed 3-day shipment of DC plug-in power supply modules. Select from 82,000 different models, including MIL Spec supplies and dual encapsulated supplies with identical or different outputs. Use the Hotline to tell us what outputs you need, singles or duals, regulated or unregulated. Your power supply modules will be on their way to you **in just 3 days!** Catalog on request.

Completely-wired custom power supply systems...
Shipped in just 9 days!

In a hurry for a **special** multiple-output power supply system? Acopian will design it, build it, test it, and ship it – completely wired – **in just 9 days!** Use the Hotline to tell us the DC output voltages, currents, and accessories you need. We'll discuss details and answer your questions, then give you a firm price – on the phone. Nine days later, your completely-wired power supply system will be on its way. Brochure on request.

high voltage modules

features

Output voltages listed are nominal values. They are adjustable and can remotely programmed.

Units shown normally have a positive output. Negative output furnished no extra charge.

Unregulated supplies can be supplied with floating outputs and are inhe ently reversible.

The output DC return on all units can be floated within 500 volts of chassi

All units are short-circuit-proof and can remain shorted indefinitely witho damage. They will recover automatically after removal of short.

Operating Temperature range is normally −20°C to +65°C but can t increased at nominal cost.

All AC input models will operate from a single phase 117 VAC, 50 to 420 H line.

DC input models use 28 VDC. Other input voltages can be supplied.

Units are shielded and have no external magnetic field.

Units are built to best commercial standards and can meet most MIL Spec including MIL-E-5400 and MIL STD 704.

specifications

Output Voltage	Current	Load Regulation	Ripple	Input Voltage	Line Regulation	Approximate Dimensions	Model Number

ARNOLD POWER CONVERTERS

AC-DC CONVERTER (MINIATURE SIZE) 115 VAC 50-500 HZ TO SINGLE OR MULTIPLE D.C. OUTPUTS

FEATURES
- Miniature Size (21 Cu. In.)
- Any Voltage, Single or Multiple Outputs
- High Reliability
- Short Circuit and Transient Protected
- Fully Encapsulated
- Adjustable Output
- Meets MIL-E-5272C
- Outputs are Isolated
- RFI Qualified (Mod. "I")

SPECIFICATIONS
Input Voltage: 108-130 VRMS, 50 to 500 Hz
Voltage Adjust: +5%, −25%
Line Regulation: 0.1% Typ.
Load Regulation: (½-FL): 0.9% Typ.
Temp. Coefficient: .05%/°C Max.
Temp. Range: −10° to +71°C at Case
Environmental: Per MIL-E-5272C
Altitude: 60,000 Ft.

MODIFICATIONS (4)
A—Remote Adjust
(CT)—Center Tap
E—Input Voltage Alteration
F—Additional AC Output
G—Flexible Leads
I—RFI Qualified (MIL-1-6181D Certification Supplied)
L—Tighter Load Regulation
R—Tighter Line Regulation
S—Short Terminals
V—"Crowbar" Overvoltage Protection
WW—8 Amp. Output

HOW TO ORDER:
1. **Standard Units:** Use Model Numbers Listed
2. **Overvoltage Protection:** Add V to P/N after each output voltage to be protected. $35.00/output.
3. **Special Units:** Specify PHU (40 Watts) PHO (80 Watts) or PHP (120 Watts) followed by output voltage/output current (amps) for all outputs. Any voltage 2 thru 2000 volts is available.
4. See Bulletin SZU for standard modification options and prices.

AC-DC CONVERTER (TIGHT REGULATION) 115 VAC 50-500 HZ TO SINGLE OR MULTIPLE DC OUTPUTS

FEATURES
- Tight Regulation
- Miniature Size
- Short Circuit Protected
- "Crowbar" Overvoltage Option
- Isolated Output

SPECIFICATIONS
Input: 105 to 125 VAC — 50-500 Hz
Outputs: Up to three (3) isolated outputs 3 VDC to 200 VDC
Regulation: Line .01% +1 MV
Load (NF-FL) .03% +3 MV
Ripple: .2% or 5 MV
Temp. Coefficient: .01%/°C
Operating Temp.: −10° to +85°C at Case
Overvoltage Protection (Modification "V") 120 ±10% of Nominal output voltage

MODIFICATIONS (See Bulletin SZV for Details)
A—External Voltage Adjustment
G—Flexible Leads
V—"Crowbar" Overvoltage (set at 120 ±10% of nominal output voltage)

HOW TO ORDER:
1. **Standard Units:** Use Model Numbers listed
2. **Overvoltage Protection:** Add V to P/N
3. **Special Units:** Specify PIB (1 output), PIG (2 outputs or PIL (3 outputs) followed by output voltage/current (AMPS) for all outputs. EXAMPLE: PIG-180/.10-5V/3 delivers 180 VDC @ 100 MA and 5 VDC @ 3 amps and has overvoltage protection on the 5 VDC output

Nominal Output Voltage (VDC)	Output Current (Amps)	Model	Case Size (See Table 1)	Pr 1
5	7	PIB-5/7	B	$2
28	1.20	PIB-28/1.2	B	2
180	0.20	PIB-180/.20	B	2
15 -15	1 1	PIG-15/1-15/1	C	3

-DC SWITCHING REGULATOR LOGIC SUPPLY

FEATURES
- High Efficiency
- Small Size and Light Weight
- Short Circuit Protected
- RFI/EMI Filtering

SPECIFICATIONS

Input: 105 to 125 vac
POA: 50-500 Hz
POB: 360-440 Hz
Output: 3.6 to 28 vdc @ 4 amps
Regulation:
Line: 2% (105 to 125 vac)
Load: 2% (NL-FL)
Efficiency: 70 to 85%
Operating Temp.: −20° to +71°C

Input	Nom. Output Voltage (VDC)	Output Current (A)	Efficiency %	Model	Case Size (See Table)	Price 1 pc.
115 vac 60 Hz	3.6	4	70	POA-3.6/4	C	$295
115 vac 400 Hz	3.6	4	70	POB-3.6/4	A	295
115 vac 60 Hz	5.0	4	75	POA-5/4	C	295
115 vac 400 Hz	5.0	4	75	POB-5/4	A	295

HOW TO ORDER:
Specify Model POA (50-500 Hz input) or POB (400 Hz only input) followed by output voltage/output current (Amps).

-DC POWER SUPPLIES 115 VAC 400 HZ TO SINGLE OR MULTIPLE D.C. OUTPUTS

FEATURES
- Tight Regulation
- Miniature Size
- EMI/RFI Free
- Short Circuit Protected
- "Crowbar" Overvoltage Protection
- Isolated Output

SPECIFICATIONS

Input: 105 to 125 vac, 380 to 420 Hz
Outputs: Up to three (3) isolated outputs 3 vdc to 200 vdc
Regulation:
Line: .01% +1MV
Load: (NL-FL) .03% +3 MV
Ripple: .1% or 1 MV
Temp. Coefficient: .01%/°C
Operating Temp.: −10° to +85°C at Case
Overvoltage Protection (Modication 120 ±10% or Nominal output voltage "V")

MODIFICATIONS (See Bulletin SZV for Details)

A — External Voltage Adjustment
G — Flexible Leads
V — "Crowbar" Overvoltage Protection (Set at 120 ±10% of nominal output voltage)

Nominal Output Voltage (VDC)	Output Current (Amps)	Model	Case Size (See Table 1)	Price 1 pc.
5	7	PEB-5/7	E	$195
28	1.20	PEB-28/1.2	E	195
180	.20	PEB-180/.20	E	220
15 -15	1 1	PEG-15/1-15/1	E	245
28 5	1 1	PEG-28/1-5/1	E	245
180 5	.10 3	PEG-180/.1-5/3	E	270
15 -15 5	.50 .50 4	PEL-15/.5-15/.5-5/4	E	295
24 14 5	.50 .50 3	PEL-24/.5-14/.5/3	E	295
180 28 5	.05 .50 2	PEL-180/.05-28/.50-5/2	E	320

HOW TO ORDER:
1. **Standard Units:** Use Model Numbers listed
2. **Overvoltage Protection:** Add V to P/N after each output voltage to be protected with overvoltage protection. Price: $35/Output
3. **Special Units:** Specify PEB (1 output), PEG (2 outputs) or PEL (3 outputs) followed by output voltage/output current (AMPS) for all outputs. EXAMPLE: PEG-26/.5-5V/5. Delivers 26 VDC @ .5A & 5 VDC @ 5A and has overvoltage protection on the 5 VDC output.

-DC SWITCHING REGULATOR 28 VDC TO SINGLE D.C. OUTPUT

FEATURES
- Wide Input Voltage
- High Efficiency
- Short Circuit Protected
- Small size and weight

SPECIFICATIONS

Input: 18 to 37 vdc (others available)
Output: 3.6 to 36 vdc @ 4 amps and 12 vdc @ 3 amps
Regulation:
Line: 2% (18-37 vdc)
Load: 2% (NL-FL)
Efficiency: 72 to 78%
Operating Temp.: −20° to +71°C

Nominal Output Voltage (VDC)	Efficiency %	Model	Case Size (See Table)	Price 1 pc.
3.6 @ 4A	72	SEP-3.6/4	A	$195
4.0 @ 4A	75	SEP-4/4	A	195
5.0 @ 4A	78	SEP-5/4	A	195
12. @ 3A	80	SEP-12/3	A	195

HOW TO ORDER:
Specify Model SEP followed by output voltage/Output current (AMPS). EXAMPLE: SEP-5/4 has output of 5 VDC @ 4 AMPS.

DC-DC CONVERTER

28 VDC TO SINGLE OR MULTIPLE DC OUTPUTS

FEATURES

- Miniature Size - 40 Watts (21 Cu. In.)
- Adjustable Output
- Short Circuit & Polarity Reversal Protection
- High Reliability - Hermetically Sealed
- 15 Standard Modifications Available
- Floating Output
- Closely Regulated
- Meets MIL-E-5272C
- Delivery Stock to 4 weeks

SPECIFICATIONS

Line Regulation: (26-30 VDC): .24% (2) (3)
Load Regulation: (½-Full load): 1% typical
Ripple: .1% typical
Adjustment Range: 40% to 105% Output (nom.)
Temperature: −55°C to +100°C
Vibration: 25G Max 0-2000 CPS
Shock: 100G
Altitude: To 60,000 feet
Weight: 26 Oz. Approx.

MODIFICATIONS (4)

A—Remote E_{out} Adjust
CT—Center tapped outputs
E—Input Voltage Alteration
EE—12V input
F—Additional AC output
G—Flexible leads
I—RFI qualified (case size B)
L—Tighter load regulation
P—Programmable output
R—Tighter Line Regulation
W—60 Watt output
WW—8 amp output

NOTES:

1. Any voltage in the range from 3 to 500 VDC is available.
2. Units for 12 VDC operation specify mod. EE (11-14 VDC input). $35.00
3. For inputs from 18-135 VDC specify mod. letter "E" and input voltage (min-max.). Price $35.00
4. See bulletin SZU for details & price

Nominal Output (1) Voltage (VDC	Output Current (Amps)	Model	Case Size (See Table)	Price 1 pc.
3	5.0	SHU-3	A	$195

HOW TO ORDER:
Specify Model No. - Nominal Output Voltage (VDC). EXAMPLE: SHU-30CT will deliver +15 & −15 VDC at 1.3A each. $30.00

DC-DC CONVERTER

28 VDC TO SINGLE OR MULTIPLE DC OUTPUTS

FEATURES

- Tight Regulation
- Miniature Size
- Short Circuit Protected
- "Crowbar" Overvoltage Option
- Isolated Output

SPECIFICATIONS

Input: 26 to 30 VDC
Outputs: Up to three (3) isolated outputs 3 VDC to 200 VDC
Regulation: Line: .01% +1 MV
Load: (NL-FL) .03% +3 MV
Ripple: .2% or 5 MV
Temp. Coefficient: .01%/°C
Operating Temp.: −10° to +85°C at Case
Overvoltage Protection (Modification "V")
120 ±10% of nominal output voltage

MODIFICATIONS (See Bulletin SZV for Details)

A—External Voltage Adjustment
G—Flexible Leads
V—"Crowbar" Overvoltage (set at 120 ±10% of nominal output voltage)

HOW TO ORDER:

1. **Standard units:** Use Model Number listed
2. **Overvoltage Protection:** Add V to P/N after each output voltage to be protected - $35/output
3. **Special Units:** Specify STB (1 output), STG (2 outputs), or STL (3 outputs) followed by output voltage/current (AMPS) for all outputs. EXAMPLE: STL-24/.50-14V/.50-5/3. Delivers 24 VDC @ 50 MA, 14 VDC @ 50 MA and 5 VDC @ 3 amps. Overvoltage protection is provided on the 14 VDC output.

Nominal Output Voltage (VDC	Output Current (Amps)	Model	Case Size (See Table)	Price 1 pc.
5	7	STB-5/7	B	$220
28	1.20	STB-28/1.20	B	220
180	.2	STB-180/.2	B	245

DC-DC CONVERTER—3 WATT

28 VDC TO SINGLE OR DUAL D.C. OUTPUTS

FEATURES

- Sub-miniature Size & Weight (3 watts in 3.3 Cu. In.)
- Adjustable Output
- Short Circuit, Transient & Polarity Reversal
- High Reliability — Hermetically Sealed
- 15 Standard Modifications Available
- Floating Output
- Closely Regulated
- Meets Mil-E-5272C
- Delivery Stock to 4 weeks

SPECIFICATIONS

Input: 26-30 VDC
Line Regulation: .3% (26-30 VDC E_{in})
Load Regulation: 1-4% (½ to F.L. depends on output voltage)
Output Adjustment Range +5% −10%
Ripple: 0.3% (RMS)
Temperature: −55°C to +100°C at surface of unit
Vibration: 25G 0-200 CPS
Shock: 100G
Environment: Designed to meet MIL-5272C

MODIFICATIONS (See Bulletin SZV for Details)

A—Remote E_{out} Adjust
CT—Center Tapped Outputs
D—Adjust Pot on Side
E—Input Voltage Alteration
F—Additional AC Outputs
I—RFI qualified (Case Size Q)
P—Programmable Output
S—Short Terminals (⅜ inch)
Z—Broader Adjustment Range

Output VDC	Output MA	Model	Case Size (See Table)	Price 1 pc.
2	750	SMU-.002	M	$200

2000 6.3 AC	0.7 200	SMU-2F	M	285

HOW TO ORDER:
Specify model no. - Nominal Output voltage in KVDC.
EXAMPLE: SMU-1.5D will deliver 1500 VDC at 2 ma with adjust pot on side of unit.
Delivery: Stock to 4 weeks ARO

DC-SINE WAVE INVERTER

28 VDC TO 400 HZ SINE WAVE OUTPUT

FEATURES

- Miniature Size
- Closely Regulated Output Voltage
- Low Harmonic Distortion
- Meets MIL-E-5272 & MIL-STD-709A
- Closely Regulated output frequency
- Generates NO RFI-EMI

SPECIFICATIONS

Input: 24-30 VDC or 10-14 VDC for SKB & SKD
Output: Voltage: 28 or 115 VRMS, Isolated fro, case and input. (Other voltages 6-440 VRMS available.)
Frequency: 400 Hz (Other frequencies 360 to 10 KHZ available.)
Wave Shape: Sine Wave with maximum distortion of 4%
Regulation: Output Voltage: ±.5% line, ±2% load
Output Frequency: ±.3% line, ±.2% load
Temp. Coefficient: ±.05%/°C

Input (VDC)	Output (VRMS)	Output Power (VA)	Case	Model Number	Price 1 pc.
10-14	115	20	K	SKB-12-115-400-20	$270
10-14	115	40	L	SKD-12-115-400-40	479
10-14	28	20	K	SKB-12-28-400-20	270
10-14	28	40	L	SKD-12-28-400-40	479
24-30	115	12	P	SEC-28-115-400-12	195
24-30	115	50	K	SKB-18-115-400-50	270
24-30	115	100	L	SKD-28-115-400-100	479
24-30	28	12	P	SEC-28-28-400-12	195
24-30	28	50	K	SKB-28-28-400-50	270
24-30	28	100	L	SKD-28-28-400-100	479

HOW TO ORDER:

1. **Standard Units:** Use model numbers listed.
2. **Special Units:** Specify SKB (50VA), SKD (100VA) or SEC (12VA) - Nominal Input Voltage - Output Voltage - Frequency - Output Power (VA).

EXAMPLE: SKB-26-100-800-40 operates on a nominal 26 VDC input and deliver 100 VRMS at 800 Hz with output power of 40 VA.

PRINTED CIRCUIT STYLE POWER SUPPLIES

115 VAC 50-500 HZ TO SINGLE OR DUAL D.C. OUTPUTS / 28 VDC TO SINGLE OR DUAL D.C. OUTPUTS / 5 VDC BUSS TO SINGLE OR DUAL D.C. OUTP

FEATURES

- Hermetically sealed steel case
- Flexible Lead Spacing
- Small size and weight
- Tight Regulation

SPECIFICATIONS

Input Range: PCA: 105 to 125 VAC 50 to 500 Hz
PCD: 4.9 to 5.1 VDC — PCE: 25 to 31 VDC

Outputs: Set to ±2% of nominal. Other output voltages available.

Regulation: Line: .01% +1 MV
Load: .03% +3 MV (NL-FL)

Ripple: .1% or 1 MV

Temp. Coefficient: .01%/°C

Operative Temp.: −10° to +85°C at case

Input	Nominal Output Voltage (VDC)	Output Current (Amps)	Model	Case Size (See Table)	Pr 1
115 VAC	5	.500	PCA-5/500	0	$
28 VDC	5	.500	PCE-5/500	N	1
115 VAC	+15 −15	.100 .100	PCA-30CT/100	0	
28 VDC	+15 −15	.125 .125	PCA-30CT/125	N	1

MODEL FLD

Missile and aircraft applications
VOLTAGE: to 35 VDC
CURRENT: to 4 AMPS
CONSTRUCTION: Steel can with mounting studs and pin terminals on bottom
TEMPERATURE: −25°C to +85°C
ENVIRONMENT: MIL-T-27A
ATTENUATION: Of transient current & voltages
0-1.2 KC: 3 db min.
1-2.4 KC: 10 db min.
2 KC - UP: 27 db min.
WEIGHT: 8 Oz.
PRICE: 1 pc. $45.00

TOROIDAL COIL WINDER

Sets up quickly . . . easy to operate . . . takes wide range of wire sizes

• Min. finished hole size: .18 in. • Max. finished toroid O.D.: 4.0 in. • Winding speed: 1500 turns/min. • Wire range: AWG 44 to AWG 26 • Dual, self-checking turns counting system • Loading (wire length) counter • Core range: 9/32" I.D. to 4" O.D. to 1½" high.

LABORATORY USE — Change wire and core size in 45 sec. • **PRODUCTION USE** — 1500 turns per minute • Insert core and load in 20 sec.

Model WTA — $890.00 includes all rings, counters and accessories • **Model WTB — $750.00** without electronic counter or extra rings.

HIGH GAIN POWER CONTROL DEVICE
MODEL ROA

FEATURES
- Power Gain of 10^{14} possible
- Combines Best Advantages of Magnetic Amplifiers and SCR's
- Zero Crossing Control for Low Noise
- Delivers Full Power Cycles
- Sums any Number of Isolated Control Signals
- Control or Interrupt low Frequency Power (60 or 400 CPS)
- 8 Amps to 100 Amps

APPLICATIONS
- Heat Controller: Thermister, Thyristor, Thermocouple or other Transducer Control. Direct Thermocouple Control
- Power Supply Protection
  Overcurrent or Undercurrent Control or AC primary — Control completely isolated
- Helix Protection for TWT
- Direct Power Control with Independent "Wired" in Programs
- Delivery: Stock to 12 weeks.

W PASS FILTER
MODEL FLU

Reduce Ripple in Converter Output
VOLTAGE: 5 to 5000 VDC
CURRENT: 8 MADC to 4 ADC
ATTENUATION: 40 DB @ 3 KHZ
For use with PHU, PHO, PHP and SHU Converters
SIZE: 1⅜" x 1⅞" x 3 5/16"
HOW TO ORDER: EXAMPLE: Specify FLU-output Voltage, FLU-30 is 30 Volt Filter
DELIVERY: Stock to 4 weeks ARO

300 WATT MINIATURE AC - DC POWER SUPPLY MODEL MAP

FEATURES
- 192 Cubic Inches (8" x 8" x 3")
- 14 pounds
- High Efficiency
- Reliable Self Compensating Circuitry
- Regulated Output

SPECIFICATIONS
- Input: 115 VAC 47 - 500 Hz
- Output: 5 VDC @ 60 amps to 1000 VDC @ .30 amp.
- Regulation: 2%

Delivery: Custom designed to satisfy customer needs

CUSTOM POWER SUPPLIES DESIGNED & BUILT TO YOUR SPECIFICAT

Astro-Metrix Corporation, division of J.K.F. Industries, has the complete in-house capabilities for design and production of custom and O.E.M. system power supplies. Our entire DC power supply capability is directed toward filling the **volume** requirements of the original equipment manufacturer. We are currently manufacturing computer power supplies based on **constant voltage transformer** pre-regulators, **high frequency switching** pre-regulators, **phase controlled SCR regulators** as w standard transformer input. Extensive use of grated circuits reduce circuit complexity. Wi in depth experience available at Astro-Metri poration the **most ideal** fundamental design c applied in manufacturing, resulting in low cos high reliability.

Typical multiple output O.E.M. power supplie

MODEL AMC-M-338

SPECIFICATIONS

Input: 105-125 VAC 47-65 CPS
Output: 5v - 13a
+12v - 6a
−12v - 4a
+ 6v - 2a
+12 volt sequence by computer logic
Regulation: .1%
Ripple: 10mV
Size: 5" x 19" x 20"
Price: $530.00 - 100 up

MODEL AMC-M-270

SPECIFICATIONS

Input: 105-125 VAC 47-470 CPS
Output: +18V @ 3.5a
+12V @ 1a
− 6V @ 1.5a
Regulation line and load:
Ripple: 10mV P-P
Price: $175.00 Production Quantities

MODEL S-1070

SPECIFICATIONS

Input: 105-125 VAC 47-470 CPS
Output: +12V @ 6 amp
Regulation line and load: .1%
Ripple: 10mV P-P
Price: $165.00 Production Quantities

MODEL AMC-VA-125-30

SPECIFICATIONS

Input: 0-125V dc
Regulation: ±10%
Ripple: 1%
Current: 0-30 Amps dc
Price: $725.00 ea

MODEL AMCRC-36-200

SPECIFICATIONS

Input: 220/440 VAC
Output: 0-36V dc
0-200 Amps
Regulation line and load: .1%
Ripple: .1%
Output impedance: .005 ohms
Price: $3,950.00 ea

MODEL AMCRC-36-20

SPECIFICATIONS

Input: 105-125V dc
Output: (Volts) 0-36V dc
(Amps) 0-30
Regulation: .005% line
.005% load
Ripple: 1mV RMS
Output Impedance: .005 oh
Programmable: 1,000 ohm/
Ambient: 0-70°C

OLID STATE SINE-WAVE OUTPUT FREQUENCY CONVERTERS / 400 CPS and 60 CPS

- **All Silicon • Short-Circuit Proof • MIL-Type Construction**
- **High Efficiency • Low Cost • Compact • Light Weight**
- **3 ϕ Models Have Independent Voltage Regulation/Phase.**

s NEW type of frequency converter was researched and veloped by ASTRO-METRIX CORPORATION to meet the er growing market for smaller, lower cost A.C. power sup- es. The industry-praised design employs a high-efficiency itching regulator coupled with an equally high-efficiency fer network. By providing transformer isolation in the her frequency output end of the power supply, the need for a heavy weight and bulky (50-60 cps) input power transformer has been eliminated, which also reduces much of the heat generated inside the unit. The magnetics are also "Class F" for reliability and overload capability, and can be ordered to meet MIL-T-27 if desired.

The standard Models come with input circuit-breaker, pilot lamp and output terminals on the front 19" Relay panel; the rear panel is blank except for 6 ft. line cord. The list of OPTIONS (below) enables you to CUSTOMIZE a unit to your individual needs simply by adding the appropriate suffix letters after the Model Number.

PECIFICATIONS COMMON TO ALL STANDARD MODEL FREQUENCY CONVERTERS

ut: 105 to 125 VAC, 47 to 65 CPS
age Regulation: Less than ±1.0%
tage Modulation: Less than ±0.5%
quency Stability: ±0.25% (See Options)
overy Time: 25 msec
tput: 105 to 125 VAC, 400 CPS (see Option)
tortion: Less than 3.0%
bient Temperature: 0°C to +55°C (see Option)
miconductors: Silicon
wer Factor: ±0.7%

AVAILABLE OPTIONS

Select from the chart below the desired Model Number to meet your needs by Phase and VA rating. Then select from the list of OPTIONS the suffix letter(s) that corresponds to the option(s) needed to customize the standard model to your requirements and add them to the Model Number. EXAMPLE: FC-104-1S-V-H would be a 100 VA, 1ϕ unit with a volt meter and handles added.

Add SUFFIX

- **A** Adjustable output voltage — 0 to 130 VAC at full-rating. Not available on 3 ϕ or low distortion models.
- **C** Current Meter ±3% accuracy.
- **D** Distortion less than 0.5%.
- **F** Frequency stability of 0.01%.
- **H** Handles on front panel.
- **J** Voltage adjust ±10% control on rear panel.
- **K** Frequency adjust ±5% control on rear panel.
- **M** Frequency meter 400 CPS ±20, Accuracy ±0.1%.
- **P** 47 to 480 CPS operation.
- **R** Rear panel terminals for Output.
- **S** Synchronization terminals on rear panel to sync two identical units.
- **T** Temperature range from −55°C to +71°C.
- **V** Voltmeter ±3% accuracy.

Other output frequencies and voltages are available on request. Please contact the factory or our representatives to obtain other modifications not listed above.

POWER CONVERSION using (Silicon Controlled Rectifier)

ILITARIZED FREQUENCY CHANGERS

— Astro-Metrix Corporation Frequency Converters are designed to con- ert Mil 400 CPS 3 phase power to 60 CPS single phase at high efficiency thru the use of silicon semiconductors operating n switching mode.

he converters provide power for **teletypewriters, test equipment, communication equipment** and various other ground support quipment.

PECIFICATIONS:

put Voltage: 115/200 VAC ±13%.
put Configuration: Three Phase, 4 Wire Wye.
put Frequency: 360 CPS, 440 CPS.
uptut Voltage: 115 Volts RMS.
utput Frequency: 60 CPS ±1%.
oltage Regulation: ±3 Volts for 0 to 100%. Change in load and for ±13% change in Input Line Voltage.
Power Factor: 0.75 Lagging to Unity. No Load to Full Load.
Distortion: 5% Maximum Distortion for All Conditions of Line, Load and Temperature.
Starting Time: 3 Seconds Maximum.
Common Connection: Input and Output Completely Isolated.
Overload: Overcurrent protection in Both Input and Output Lines.
Efficiency: 82% Minimum at Rated Load.
RFI: Radiated MIL-STD-826 Class G. Conducted MIL-STD-826 Class G.
Circuit Breaker: Self Contained Magnetic Circuit Breaker in Input Lines.
Temperature Range: STD −30°C to +71°C. OPT −50°C to +71°C.
Time Indicator (Optional): Elapsed Time Indicator Non-Resetting 9999.9 Hours Numerical Form.

HIGH VOLTAGE - SOLID STATE - POWER CONVERSION

Astro-Metrix Corporation has developed unique high frequency switching circuitry which combined with our in-house high voltage transformer capability results in truly outstanding high voltage power supplies for **CRTs** display and monoscope character generator display tubes. The power supplies can withstand repeated HV arcing and short circuiting without damage. We have produced thousand regulated HV dc power supplies for the industr the last two years resulting in over 1,000,000 o ating hours. These proven designs can be ada to your requirement usually with a minimum change.

Similar circuitry is being applied to airborne HC power plies to be used in radar display for both commercial military aircraft.

SPECIFICATIONS

Typical Unit: HIGH VOLTAGE

Input: 25V dc
Output #1: −1800V 1.5mA

AUSTRON

inverter / converter power supplies

ies 5020 square-wave inverters

DESCRIPTION

The Series 5020 is a frequency controlled square-wave inverter which has been designed for applications requiring small size and high efficiency. Inherent reliability has been designed into the unit under all load and line conditions. The performance advantages of the 5020 Series are superior to any inverter of this type and size on the market.

The all-silicon circuit utilizes a fixed or adjustable internal clock for controlling the output frequency. The stability of the clock can be selected from ±1% to ±.005%.

Special design steps were taken to insure that the unit operates well below secondary breakdown conditions. Also zener protection is included to guarantee against adverse load conditions.

odel 30

Unregulated 55-70 cps or 340-460 cps AC input from shipboard, diesel generator, REA lines, etc., is regulated by the AUSTRON Model 30 Power Module to either 60 or 400 cps (or any required frequency) with an output frequency tolerance of as much as 5×10^{-7} and output power of 250 va.

AUSTRON Model 30 Modules are used as frequency controlled power sources for all types of synchronous motors, instrumentation, tape recorders, remote clocks, depth recorders, etc.

AUSTRON crystal oscillator frequency standards are combined with the latest silicon solid state circuitry to achieve precise frequency and voltage stability at useful power loads.

odel APS-14AB

model 5020-1020

AUSTRON is active in the following areas of POWER SUPPLIES:

- MODULAR DC-DC CONVERTERS — microwatts to 750 watts.
- MODULAR SWITCHING MODE REGULATOR — integrated circuit power regulator.
- MODULAR DC-AC INVERTERS — 25VA to 750VA.
- STANDBY POWER SYSTEMS — battery charger and inverter system.

Austron power supplies feature all silicon semiconductors. Extremely high efficiency allows for high temperature operation, permits full MIL environmental certification.

AVTEL

UPS UNINTERRUPTIBLE POWER SYSTEMS

250 VA to 1 Mega VA

CONDITIONED POWER

AVTEL's Uninterruptible Power Systems (UPS) offer the maximum in reliability and efficiency for applications where even a momentary power failure or disturbance cannot be tolerated. High mean-time-between-failure (MTBF) coupled with modular construction for low mean-time-to-repair (MTTR) make Avtel UPS the most practical systems for continuous on-line operation.

AVTEL UPS ARE DESIGNED TO PROVIDE THESE OUTSTANDING ADVANTAGES:

TRUE SINEWAVE OUTPUT: The maximum harmonic distortion under the worst combination of conditions is less than 2%. Under normal operating conditions, less than 1.5% is typical.

TIGHT FREQUENCY CONTROL: The output frequency is completely unaffected by load and line variations. If desired, the output frequency can be phase-locked to the commercial line or other reference source. 0.5% stability is standard.

MINIMUM MAINTENANCE: Modular construction throughout permits quick access to and exchange of any component. A MTTR of less than 30 minutes is typical. Cleaning the air filter is the only required preventive maintenance, other than battery watering. In non-redundant systems, the by-pass switch is used to supply power to the critical load directly from the commercial lines during maintenance.

LOW COST OF OWNERSHIP: Avtel's low maintenance, high efficiency and trouble-free operation yield substantial savings over other approaches to uninterruptible power. This advantage becomes increasingly significant with time, and savings of over 50 percent overall in ten years ownership are not improbable.

SILENT OPERATION: Unlike rotary systems which produce sub-substantial noise and vibration, these compact and silent units can be installed in close proximity to the load with which they are associated thereby avoiding expensive installations.

HIGH POWER DENSITY: These systems are the smallest and lightest yet offered in these power ranges. For example, a 125 KVA system occupies only 35 square feet of floor space, exclusive of batteries.

UNPRECEDENTED EFFICIENCY: Operating efficiencies normally exceed 85%. This low dissipation allows laboratory operation without special cooling considerations.

COMPLETE INSTRUMENTATION: Meters, status indicators, other instruments necessary for the measurement of all c cal parameters are provided as desired.

PHASE BALANCE: Poly-phase systems supply essentially anced outputs despite substantial unbalance in phase loac

IMPERVIOUS TO OVERLOADS: These units cannot be dama by overloads or short circuits. Normal output is automati reinstated upon removal of the overload.

RFI SUPPRESSION: Careful and effective filtration of both input and output lines, together with ample shielding a RFI attenuation far superior to other uninterruptible syst

OPERATING SIMPLICITY: This equipment can be operated s by non-technical personnel. Logically grouped meters, con and status-indicating lamps make the operation of this e ment virtually self-explanatory. Fully automatic, instru free systems are also offered.

ALARM CIRCUITRY: Visual and audible alarms are provide indicate loss of incoming power and switchover to secon sources. Additional alarms pinpoint failures in the UPS i in the remote possibility that they might occur. A sepa alarm system indicates battery bank status including c tions of the atmosphere in the battery room.

CHOICE OF OUTPUTS: Avtel's UPS can be ordered in stan 460 V, 60 Hz models or 50 Hz versions at voltage levels f in overseas installations. A complete line of 400 Hz m is also available.

RAPID RESPONSE TIME: Regulation response time is typi faster than 9 ms at nominal line conditions for a 100% load change.

ARALLELING STANDARD MODELS

nt, reliable and silent in operation, these completely solid electronic systems are ideal for any application requiring AC in the KVA ranges. In this series, there are 27 standard s in ten power ratings from 2.5 KVA to 175 KVA. Three output ncy bands are available from 45 to 65, 350 to 450, and 700 0 Hz. Most frequency and power ratings are available with single or polyphase output. Unique electronic circuitry pro- complete protection from overloads or short circuits.

s highly versatile and rugged units are capable of fulfilling the ty of AC power source requirements. Twenty-nine standard s are offered to meet virtually any special or unusual require- for conditioned AC power.

R Series utilize many advanced techniques developed and d by Avtel for highly critical military and aerospace applica- The unique design of these units, coupled with Avtel's rigid y assurance and reliability program, ensures uncompromising ence to published performance criteria.

ructed with silicon semiconductors exclusively, these units are rugged and efficient. Most of the models are available with interruptible power option providing the most reliable, transient continuous source of AC power obtainable.

other options are available to meet any application.

nique design of this equipment results in an AC source which direct replacement for motor alternator sets, but with the ing superior characteristics:

- Output frequency unaffected by load.
- Low accoustical noise.
- Efficiencies over 90%.
- Instant starting.
- Sinewave output with less than 2% total harmonic distortion.
- Ease of frequency variation.
- No maintenance required.
- Light weight.
- Impervious to overloads.
- Remote sensing.
- Remote programming.

† Weights given are for rack mount versions when available. Options frequently affect size and weight. Please consult the factory when requiring options.

Specifications subject to change without no

INPUT

VOLTAGE: 187 to 242 for nominally 120/208 volt input units. Allows connection to 230 three wire without modification.
±10% of nominal for all other AC inputs. See Options A through G.

POWER:

Output Frequency Band	Percent of Full Load Rating
45-65 Hz	110
350-450 Hz	120
700-900 Hz	135

FREQUENCY: 45-65 Hz. See Option A, B, C & H.

OUTPUT

VOLTAGE: Adjustable. See Options I & K.
CURRENT: Adjustable. See Options J & L.
POWER RATING: Based on continuous duty.
FREQUENCY: Continuously adjustable over the entire operating band. See Options M through R.
BANDS: 45-65, 350-450, 700-900 Hz.
REGULATION:
- **Voltage:** ±1% or 0.5 V.
- **Current:** ±1% or 1 ampere.
- **Frequency:** ±0.50% for variable frequency operation. ±0.010% for fixed frequency operation.

DISTORTION: For linear loads, the output sinewave contains less than 2% total harmonic distortion. See Option U.
POWER FACTOR: 0.7 lead to 0.7 lag for full rated power. Power factor loads to 0.2 are permissible with load ratings of 50%.
PHASE BALANCE: 2% typical deviation for 50% load unbalance in any combination. 0.25% for any balanced load.
TRANSIENT RESPONSE: Typically 20 ms but may vary from 4 to 75 ms depending on model and options.

INCIDENTAL MODULATION:
- **Amplitude:** Varies 0.1 to 1% peak to peak depending on model and options.
- **Frequency:** Less than 0.05% for variable frequency operation and negligible for fixed frequency operation.

PROTECTION CIRCUITS

LOAD: Widely adjustable current limiting capability can be set to the maximum normal requirements of the load. In the even of load malfunction, the unit will become a constant current source at the set limit.
OVERLOAD: The unit cannot be damaged by any overload or short circuit of transient or indefinite duration. Finite overloads are permitted for periods inversely proportional to the magnitude of the overload. When the permissible overload limitations are exceeded, the output voltage will reduce to such value as necessary to produce the load current limit set by the current adjust control. If the load instantaneously exceeds 150 of ratings, the output voltage will reduce to zero. If the load is gradually increased, the current will limit at 125% or the set point, whichever is lower. Reduction of the load to specification limits or current control setting will automatically reinstate normal operation.
OVERHEAT: The output is interrupted by thermoswitches in the event of excessive internal temperatures. In such event, the cooling fan continues to operate and upon reduction of internal temperatures to specification limits, normal operation is automatically reinstated.
BACKUP PROTECTION: The input power line is protected by a toggle-operated magnetic circuit breaker which doubles as the primary input and power switch. In the event of electronic protection circuitry malfunction or component failure in the power system, these breakers will prevent consequential damage to the unit, its load or the input power source.

CONTROLS

INPUT: Toggle-operated circuit breakers.
OUTPUT: Toggle switch drives regulator to output condition in standby position.
VOLTAGE CONTROL: Adjusts output voltage.
CURRENT CONTROL: Adjusts output current lim
FREQUENCY CONTROL: Adjusts output frequen
FREQUENCY SELECTOR: Selects discrete frequen Options P & R only.
VOLTMETER SWITCH: Selects voltmeter circuit.
FUNCTION SWITCH: Selects operating mode. tions M thru O only.

METERS & INDICATORS

METER ACCURACY: 2% of full scale.
METER FUNCTIONS: Input/Output voltmeter. pendent ammeter for each output phase.
INDICATORS: Input power • Output power • load • Overheat • Phase sequence (3 phase u

ENVIRONMENTAL

OPERATING TEMPERATURE: 0 to 40°C, contir operation.
STORAGE TEMPERATURE: −20 to +71°C.
HUMIDITY: 0 to 95% R. H., non-condensing.
SHOCK & VIBRATION: Normal transportation handling.

ELECTROMAGNETIC INTERFERENC

Constructed in accordance with Military EM requirements.

OW POWER SOLID STATE REQUENCY CHANGERS

AVTEL

IES
2000 VA — 45 TO 450 Hz
50/60, 400, 800, OR 1600 Hz
WITH UNINTERRUPTIBLE POWER OPTION
LE ON MOST MODELS

o power Avtel TR Series Frequency Changers are all transistorized of conditioned AC power. Available in 20 standard models from to 2000 VA, the TR Series supplies output frequencies in four bands: 45-65 Hz, 350-450 Hz, 700-900 Hz, and 1500-1700 Hz. vailable as uninterruptible power systems.

que design of TR Frequency Changers ensures that output m and frequency are unaffected by changes in the load. The quiet, maintenance free, and impervious to overloads and short Avtel's TR Series Frequency Changers are the ultimate solution er load applications where well-regulated AC power is essential.

AVTEL

AVTEL SOLID STATE TRANSFER SWITCH

500 MICROSECOND TRANSFER TIME

AVTEL's revolutionary solid state transfer switch (SSTS) represent significant breakthrough in handling AC power. Available in single three phase configurations in power levels up to hundreds of k Avtel's SSTS is capable of a complete power transfer between un chronized sources in less than 500 microseconds. 600 microsecond worst case under any conditions. Internally protected against overlo and short circuits, Avtel's SSTS has many applications. As an opti accessory for an Uninterruptible Power System or Frequency Chan (Figure A) the SSTS can be used as an automatic bypass to tran power back to the input line in the event the inverter output exce specification units. It can be used for paralleling inverter outputs redundant system configurations (Figure B). In such systems the verters are normally sharing the load but in the event of internal fai the faulted inverter is switched off line. If desired, this sort of sys can be configured so that one or more inverters are on line and others off line. The switch then selects on a preferred basis. The S can also be used independently of an UPS (Figure C) for selecting tween preferred (prime) and alternate (stand-by) power sources.

To effectively achieve transfer upon the degradation of on line po without creating constant switching due to load transients and the l Avtel has developed a unique high speed sensor which is capable distinguishing faults from normal line deviations yet triggering SSTS whenever an actual problem occurs.

AVTEL

MILITARY ENVIRONMENT FREQUENCY CONVERTERS

MODEL: TRM 036-1
400 Hz, 1ϕ to 60 Hz, 1ϕ, 300 VA • QUALIFIED TO MIL-E-5400J, AIRBORNE

UNIQUE FEATURES

EXTREMELY SMALL SIZE: 8″ x 8″ x 5″ — High packaging density saves critical space — Fits in many otherwise unusable areas.

LIGHTWEIGHT: Approximately 16 lbs. About half the weight of competitive models.

RUGGED: All solid state. Meets Mil Spec MIL-T-5422 for shock.

OVERLOAD PROTECTED: Internally protected against overloads and shorts.

HIGH EFFICIENCY: In excess of 80%.

MIL QUALIFIED: All solid state, rugged construction. **Qualified** for sand, dust, vibration, fungus, humidity and salt atmosphere portion of MIL-E-5400J, and shock per MIL-T-5422.

SPECIFICATIONS

Input: ..... 115 VRMS, ±10%, 400 Hz, ±10%, 1ϕ.
Output Voltage: ..... 115 VRMS, 1ϕ
Voltage Regulation: ..... ±2% for all conditions of line, load, and temperatu
Output Frequency: ..... 60 Hz
Frequency Regulation: ..... ±0.5% for all conditions of line, load and temperat
Output Power: ..... 300 VA
Output Configuration: ..... Single phase sine wave
Distortion: ..... 5% THD at rated load, 7% THD maximum for all conditions of line, load and temperature.
Output Power Factor: ..... 0.75 leading to 0.75 lagging
Efficiency: 80%
MTBF: ..... In excess of 10,000 hours at 65°C, airborne per MIL-HDBK-217A.
Operating Temperature: ..... −20°C to +65°C
Altitude: ..... Sea level to 50,000 feet
Relative Humidity: ..... To 55%
Other Environmental Considerations: ..... Qualified for sand and dust, vibration, fungus, humidity and salt atmosphere to MIL-E-5400J; sh per MIL-T-5422.
RFI: ..... Qualified to MIL-I-6181D
Physical Size: ..... 8″ x 8″ x 5″
Weight: ..... Approximately 16 pounds

CONDITIONED AC POWER FOR ANY APPLICATIONS

AVTEL

R AND UPS STANDARD OPTIONS

tio A through G, and AB, AC, AD, AE available on most models. Options H through AA available on all models.

Option	Description
	Uninterruptible, on line, AC/DC input power system. Output remains constant despite commercial line power failure without output transients at time of input power switchover. This option utilizes DC input from a battery bank and includes battery charging circuitry. Charge is controlled at an adjustable constant current than adjustable voltage crossover and then is automatically reduced to a value sufficient to maintain the battery at full charge.
	Same as A with the addition of a manual, make-before-break, by-pass switch for taking UPS off line for maintenance or other purposes.
	Same as A with automatic bypass operation which switches the critical bus to the input line in the event of UPS output exceeding specification limits. Available in standard or solid state configurations.
	115 V, single-phase input.
	230 V, single-phase input.
	115/200, three-phase input.
	230, 410, 440, 460 or 480 V three-phase input. (Please specify).
	115/200, 45-450 Hz three-phase input. (460 V for 20 and 50 KVA units.)
	Output voltage adjustable from 0 to 135 Vrms via front panel control for CR, 10 to 130 Vrms for TR.

Option	Description
J.	Output current limit adjustable from 10-125% of rated output via front panel control.
K.	Output voltage adjustable from 95 to 135 Vrms via front panel control for CR, 95 to 130 Vrms for TR.
L.	Output current limit adjustable from 75-125% of rated current via front panel control.
M.	External synchronization from pulse, sine or complex waveform sources.
N.	Output phase lock for parallel on line operation.
O.	Phase lock and load coupler for parallel operation of 2 or more units. This option has provisions for alarm and automatic shut-down of a malfunctioning unit.
P.	Fixed frequency operation in addition to standard variable frequency selectable by front panel switch. The fixed frequency has a tolerance of .01% for the combined effects of line, load and environmental extremes and can be supplied at any frequency within the band.
Q.	Single fixed frequency operation in lieu of variable frequency. (0.01% tolerance).
R.	Multiple fixed frequency operation, switch-selected. No variable frequency. (±0.01% tolerance).
S.	Frequency meter, Reed type. Covers full range of unit.

Option	Description
U.	Output waveform −1% THD max.
V.	Qualified to MIL-I-6181, MIL-STD-826 or MIL-STD-461.
W.	Running time meter, 0-9999 hours. Recycles at 10,000 hrs.
X.	Unitized construction for application where rack mounting is not intended.
Y.	Unitized construction, mounted on rubber-tired, full castering wheels. (CR models only).
Z.	120 V Delta Output (3 phase models only).
AA.	Switchable delta/wye output with dual-range meter scales and front panel mode indicator.
AB.	120/240 dual range output voltage for models with single phase output.
AC.	105-140 input.
AD.	210/280 input.
AE.	Variable frequency operation (TR systems model only). Standard on CR Series and TR Lab. models.
AF.	Remote control and status panel for use up to several hundred feet from the equipment. Various combinations of controls, indicators and meters available.

NOTE: Certain options effect equipment size and weight. When specifying options, please check with the factory on equipment physical characteristics.

PALLELED RELIABILITY:

VTE s design practices incorporate maximum derating of critical components, odr construction and minimum components consistent with performance. d e minimum 200 hour burn-in all Avtel equipment receives prior to shipment, and you can be assured of maximum availability of continuous, transient free, conditioned power.

MILITARY POWER SOURCE
50-400 Hz Input, 28 VDC, 5A and 1 KVA, 400 Hz, 3 phase output.

STRAIN GAUGE POWER SUPPLY
This unit, developed for a research rocket aircraft, is one-third the size and weight of the equipment it replaces. INPUT—115 Volts AC, 400 Hz, 3-phase; OUTPUT—12 Volts DC at 10 Amperes; VOLTAGE REGULATION—0.1% for combined effects of line, load and temperature variations.

STAC INVERTER
500A, 25 VDC to 115 VAC, 60 Hz.

GUIDANCE SYSTEM POWER SUPPLY
A split phase static inverter, this unit supplies two outputs of 125 VA at 90° ±0.5° phase angle displacement. Output frequency is held to 0.001% and the true rms value of the output voltage is maintained within 0.1%.

Eleven years ago, Avtel specialized in solid state power conversion equipment and has concentrated its efforts in this area ever since. Whatever your individual power conversion requirements may be, you are assured that our technical staff will give them prompt and skillful analysis. With over 200 custom designs and years of systems experience, these power conversion specialists appreciate the value of timely recognition and consideration of potential problem areas associated with integrating power sources into complex systems. In the interest of precluding systems interface problems, Avtel offers the assistance of its applications engineers to study your requirements and formulate suitable specifications.

NOTE: Avtel also manufactures subcarrier oscillators. See Section 2900.

CEA *a division of Berkleonics, Inc.*

ABOUT THIS REFERENCE CATALOG...

This catalog is designed to simplify your choice of the widest variety of modular power supplies available.

- Only with CEA are you given the complete freedom to specify the exact voltage (center voltage) that you desire.
- Only with CEA are you given the flexibility of designing your own power supply through the use of the widest variety of options available.
- Only with CEA are you given the choice of regulation classes from 1% to 0.0005%.
- Only with CEA are you given a shielded transformer on every power supply ordered.

HOW TO USE THIS CATALOG...

Pick the model series from the adjacent chart which most nearly meets the needs of your requirement, and turn to the page indicated for complete ordering data.

For assistance call your local sales representative listed on the front cover or call our factory direct: Area Code 213 359-9261.

WHY CEA POWER SUPPLIES?

because only CEA offers you
a one-stop service that will satisfy
ALL of your modular power needs...

CHECK THESE FEATURES AGAINST YOUR NEEDS ✓

- Choice of **6** Regulation Classes, from 1% to **0.0005%** √
- **Smallest** Size Modules √
- An Option for **Every** Design Requirement √
- Highest **Insulation** Resistance Available √
- Available in **Any** Voltage from 3.5 to 500 Volts √
- Greatest **Stability** √

AND...

- **Every** CEA Supply has a Shielded Transformer for **Safe** I.C. Use

Every CEA product is fully tested and certified to meet specifications.
Specifications are guaranteed, not just typical.

STANDARD FEATURES ON **ALL** CEA SUPPLIES

• overshoot protection
Standard circuitry provides voltage limiting at 1 over maximum voltage rating for absolutely no shoot at turn on or turn off.

• short circuit protection
Standard circuitry drops output current to app mately 2% of rated. Short can be held indefin without damage to supply or system. Auton restart upon removal of short.

• series starting
Standard circuitry allows 2 or more units to be nected and operated in series without damage

• floating outputs
Either output terminal can be grounded accor to the requirement of positive or negative vo output. Both terminals can be operated at u ±500 volts with reference to the case.

• remote sensing
Terminals included to eliminate the effect of load lines.

• serviceable
Units are designed in standard Mil-T-27 cases removeable covers to facilitate servicing.

• warranty
Every CEA Power Supply is covered by a three parts and labor warranty.

WHY DOES CEA GO TO ALL THE TROUBLE OF USING A SHIELDED TRANSFORMER ON EVERY POWER SUPPLY?

...ecause it's the most logical way to provide electrical isolation for your system circuit. With today's IC, isolation of the circuit is mandatory by one means or another, so why not do it in the most direct, effective and least costly manner?

The extreme sensitivity of INTEGRATED CIRCUITS makes them highly vulnerable to both destruction and nuisance triggering by any extraneous voltages. This statement I'm sure we agree on, but did you know that your system's POWER SUPPLY is probably the culprit of your problems?

The power transformer of any Power Supply has a very significant amount of coupling capacitance between the primary and secondary windings (Reference column 2 of figure 1) which emphatically provides an undesired direct path for all transient voltages. This direct path, which allows a complete open door for unwanted signals, is the most significant factor in the majority of today's system application field problems. As the computer engineer put it, "being off by one bit is as good as a mile."

While the exact value of this coupling capacitance is a variable with the size of the transformer, and the quality of its manufacture, CEA has taken the unique approach of providing at least 20 db of shielding at the transformer on every power supply produced. Effectively this says that with a CEA supply, you will be getting ten (10) times less capacitance between primary and secondary (hence between line and circuit) than you would with an unshielded transformer. It's one of the real bargains of life where you benefit more by getting less.

The more critical your application the more shielding you need, so CEA also provides optional shielding of 40 db and 100 db for reduction factors of 100 and 100,000. For convenience, the typical values of capacitance for each of the 13 CEA power supply sizes and the classes of shielding are shown on Figure 1.

While the circuit designer will normally think of noise as coming directly from the input line, it is also common to find that dangerous signals are being generated internally by heavy demand or high speed switching circuits. The cure to this problem is the discriminate use of separate power supplies at critical points within the system to effectively isolate the sensitive circuits. The isolation function of the shielded transformer works as a wall, blocking noise from going in either direction, in or out of the supply.

Only with CEA can your power supply take on a new function — that of being an isolator within your system.

. . . So that's why we go to all the trouble of using a shielded transformer in every Power Supply!

COMMON MODE PRIMARY TO SECONDARY COUPLING CAPACITY (pfd)

• ordering information

All CEA products are marketed on a direct-factory basis. There ar mark-ups or discounts (other than for quantity buyers) so that t is but one price for our products throughout the United States. maintains independent sales representatives in most states — overseas. These factory-trained men will be most pleased to give any required assistance in procuring and applying these prod

Power supplies are identified by a multipart model number, us comprising a letter group prefix (identifying the design) followed series of numbers that specify the model (usually in rated volts amperes.) Options will be identified by letter suffix specifying various features which can be added.

It is important for the expeditious handling of inquiries, orders, that the full CEA model number be used for identification, ev local specification control numbers have been assigned by your o ization.

• discounts

The following discount schedule will apply for the applicable qua of each order:

Quantity	Disc
1-4	N
5-9	Less
10-24	Less
25-99	Less
100-249	Less

• shipment

Prices shown in this catalog are f.o.b. Monrovia, California. Meth shipment will be United Parcel to all points serviced, and Parcel by those not serviced. Air shipment, truck, Railway Express or preferred routing available by prior request.

• warranty

All CEA products are backed by a firm three (3) year warranty, co all parts and labor. The warranty is honored at our factory S Department, Monrovia, California. This warranty is limited to the or replacement at the factory or other designated place of any p parts of the product which CEA determines to be defective an required to return the product to the listed specifications.

• terms

Net 30 days from date of invoice.

• price and delivery

Price and delivery information given for each series on the spe tion section for each model.

• communications

Address all mail to:

CEA, a Division of Berkleonics, Inc.
1221 So. Shamrock Ave.
Monrovia, California 91016
Telephone: (213) 359-9261

• applications assistance

Questions concerning the facilities, features, behavior, and chara tics of any product may be directed to the CEA Applications Engin Department. A staff of specialists is happy to provide any assi in the application of CEA's Power Supplies to your requirement

OW TO SELECT AND SPECIFY A CEA OWER SUPPLY OR VOLTAGE REFERENCE

is catalog is intended to allow the user to com-ely specify a standards power supply with many sm features as if he were to design it himself, nd hen to accomplish pricing and delivery without ecssarily contacting either the factory or sales psentative.

Th CEA Part Number Code System is maintained rcghout the catalog and serves as a flexible eas of identifying the model specifications.

1221 S. SHAMROCK AVENUE, MONROVIA, CALIFORNIA 91016 TELEPHONE: (213) 359-9261

• specifications

Input Voltage and Frequency Range: 105 to 125 volts, 50 to 420 Hz.
Line Isolation: 20 db of shielding between primary and secondary of transformer.
Insulation Resistance: 100 megohms.
Operating Temperature Range: −20°C to +80°C.
Storage Temperature Range: −40°C to +85°C.
Recovery Time: As fast as 10μsec depending on model
Mounting and Terminations: Refer to Page 30.
Thermal Data: Refer to Page 25.

• standard features

Available with any center voltage between 3.5 and 500 volts. Floating output allows either positive or negative output biased to ±500 volts. from case. Series starting circuitry allows two or more units to be operated in series without damage. Remote sense terminals provided. Voltage limiting circuitry prevents overshooting at turn on and turn Short circuit protection reduces shorted current to than 2% of rated current. Output adjustable with int potentiometer on classes A & B. Class C & D units ar ternally adjustable only (no internal pot.)

• optional features

The extra charge for each option is either a flat rate or percentage of the base model price. Add the larger number to base model price.

Symbol Option	Option Description	Prices	Delivery (Weeks Added)	Remarks
FIXED OUTPUTS				
F	Fixed output ±1.0%	No charge	None	Available in all classes. Delete "R" from class C & D P/N.
F1	Fixed output ±0.1%	$15	1	Available in classes B, C & D. Delete "R" from class C & D P/
F2	Fixed output ±0.01%	$50	1	Available in class D only. Delete "R" from class D P/N.
ADJUSTABLE OUTPUTS				
G	Output adjust range ±1%	$5	None	Increases output resolution.
Std.	Output adjust range ±5%	No charge	None	Provided unless a "G" or "F" option is specified.
G1	Output adjust range ±10%	$5 or 5%	1	Reduce maximum current to 80% of rated output.
G2	Output adjust range ±20%	$10 or 10%	1	Reduce maximum current to 60% of rated output.
G3	Output adjust range ±30%	$15 or 15%	1	Reduce maximum current to 50% of rated output.
G4	Output adjust range ±40%	$20 or 20%	1	Reduce maximum current to 45% of rated output.
G5	Output adjust range ±50%	$25 or 25%	1	Reduce maximum current to 40% of rated output.
Note: Next larger case size required for options G2, G3, G4 & G5. The temperature coefficient is degraded in classes B, C & D for options G2 thr				
EXTENDED TEMPERATURE RANGE				
H1	Temp range −55°C to +80°C	$100 or 50%	4	Requires next larger case size. Storage to −62°C.
H2	Temp range −40°C to +80°C	$20 or 20%	4	Storage to −55°C.
H3	Temp range −55°C to +115°C	$200 or 100%	6	Requires next larger case size. Storage to −62°C.
RAPID PROGRAMMING INTO LARGE CAPACITANCE LOADS				
J	Voltage pull down circuit	$40 or 30%	2	Has circuit equivalent to an output resistor of one-tenth of rated
AC INPUT VOLTAGE AND FREQUENCY				
L	Input 95-135V, 50-420 Hz	$10 or 10%	1	Derate maximum current to 60% of rated output.
L1	Input 208V ±10%, 50-420 Hz	$15 or 10%	1	
L2	Input 230V ±10%, 50-420 Hz	$15 or 10%	1	
L3	Input 460V ±10%, 50-420 Hz	$25 or 15%	1	
L4	Input 105-125V, 400 ±20 Hz	$15 or 10%	1	Reduce case size to next smaller. Derate ripple by 5X.
L5	Input 115/230V, 50-420 Hz	$30 or 20%	1	Input terminals parallel or series for 115/230 volts.
DC INPUT VOLTAGES				
L7	Input 12 VDC (11.6 to 13.8 VDC)	$35 or 20%	1	Derate output to 60% of normal.
L8	Input 24 VDC (23.2 to 27.6 VDC)	$35 or 20%	1	
L9	Input 14 VDC (12.0 to 16.0 VDC)	$45 or 25%	1	Derate output to 60% of normal.
L10	Input 28 VDC (24.0 to 32.0 VDC)	$45 or 25%	1	
SPECIAL CONNECTIONS				
N	Octal plug	$15	3	Specify option "R" or "F" with "N." Uses standard male octal plug in lieu of standard termination
PROTECTION CIRCUITS				Available in all sizes except FA.
P1	Current limiting	$25 or 15%	1	Protects system circuit. Limits current to 130% of rated.
P2	Overtemp. cutout	$20	1	Limits base temp. to max. rated. Self restarting.
P3	Crowbar voltage limit	$30 or 15%	1	Protects power supply and system circuit under all circumsta Operates at 10% over maximum settable voltage or 1 volt, w ever is greater. Remove input power to restart.
REMOTE PROGRAMMING				
R	Remote adjust (no pot provided)	No charge	None	Remote programming options allow power supply to be exte
R1	Remote adjust with 1% linearity	$20 or 10%	1	adjusted. Resistance to output ratio is approx. 5 mv per
R2	Remote adjust plus internal pot (A & B only)	$5	1	except for class C and D units below 8.5 volts which are ap
R3	Remote adjust with pot provided (A & B only)	$5	1	mately 1 mv per ohm. For potentiometer requirements see Pa
START INTO HIGH CAPACITANCE LOADS				
S1	Start with 30,000 mfd/amp	$20 or 10%	1	Recommended for all capacitance loads over 500 mfd/amp.
HIGH ISOLATION				
T	40 db transformer shielding	$25 or 15%	1	Reduces capacitance between line and circuit by 100X.
T1	100 db transformer shielding	$50 or 25%	1	Reduces capacitance between line and circuit by 100,000X.
HIGH FLOAT VOLTAGE				
U	Output float up to ±1000V	$10 or 10%	1	Either output terminal will withstand ±1000 Volts to case or
RUGGEDIZED				
W	Potted for ruggedization (No internal potentiometer)			
	FA, GA, HA, JA	$5	1	Add no charge option letter "R" and letter "W" to model nu
	KA, LA	$10	1	
	MA, NA	$15	1	
	PA	$20	1	
	QA	$25	1	
	RA	$30	1	
	SA	$35	1	
	TA	$40	1	
W1	Potted for ruggedization (With internal potentiometer)	"W" prices Plus $15	1	Model number should not include either "R" or "F" optio ternal potentiometer included.

Guaranteed free from defects in workmanship and materials for three years from date of shipme

DELIVERY: Class "A" and "B" Units — 2 Weeks; Class "D" Units — 4 Weeks; Class "C" Units — 3 Weeks; Some Options Extend Delivery

CEA, *a division of Berkleonics, Inc.*
1221 S. SHAMROCK AVENUE, MONROVIA, CALIFORNIA 91016 TELEPHONE: (213) 359-9261

• specifications

Input Voltage and Frequency Range: 105 to 125 volts, 50 to 420 Hz.
Line Isolation: 20 db of shielding between primary and secondary of transformer.
Insulation Resistance: 100 megohms.
Operating Temperature Range: −20°C to +80°C.
Storage Temperature Range: −40°C to +85°C.
Recovery Time: As fast as 10μsec depending on model
Mounting and Terminations: Refer to Page 30.
Thermal Data: Refer to Page 25.

• standard features

Available with any center voltage between 3.5 and 500 volts. Floating output allows either positive or negative output biased to ±500 volts from case. Series starting circuitry allows two or more units to be operated in series without damage. Remote sense terminals provided. Voltage lim circuitry prevents overshooting at turn on and turn Short circuit protection reduces shorted current to than 2% of rated current.

• optional features

The extra charge for each option is either a flat rate or percentage of the base model price. Add the larger number t base model price.

Symbol Option	Option Description	Prices	Delivery (Weeks Added)	Remarks
FIXED OUTPUTS				
F	Fixed output ±1.0%	No charge, std.	None	Available in all classes.
F1	Fixed output ±0.1%	$30	1	Available in classes B, C & D.
F2	Fixed output ±0.01%	$100	1	Available in class D only.
ADJUSTABLE OUTPUTS				
G	Output adjust range ±1%	$15	None	Increases output resolution.
Std.	Output adjust range ±5%	No charge	None	Provided with "R" option if no other "G" option is specified.
G1	Output adjust range ±10%	$15 or 5%	1	Reduce maximum current to 80% of rated output.
G2	Output adjust range ±20%	$25 or 10%	1	Reduce maximum current to 60% of rated output.
G3	Output adjust range ±30%	$35 or 15%	1	Reduce maximum current to 50% of rated output.
G4	Output adjust range ±40%	$45 or 20%	1	Reduce maximum current to 45% of rated output.
G5	Output adjust range ±50%	$55 or 25%	1	Reduce maximum current to 40% of rated output.
Note: Next larger case size required for options G2, G3, G4 & G5. The temperature coefficient is degraded in classes B, C & D for options G2 th				
EXTENDED TEMPERATURE RANGE				
H1	Temp range −55°C to +80°C	$200 or 50%	4	Requires next larger case size. Storage to −62°C.
H2	Temp range −40°C to +80°C	$40 or 20%	4	Storage to −55°C.
H3	Temp range −55°C to +115°C	$400 or 100%	6	Requires next larger case size. Storage to −62°C.
DUAL OUTPUT ISOLATION				
K	Isolated outputs	$20 or 10%	1	Outputs isolated from each other and case ±500 Volts.
AC INPUT VOLTAGE AND FREQUENCY				
L	Input 95-135V, 50-420 Hz	$20 or 20%	1	Derate maximum current to 60% of rated output.
L1	Input 208V ±10%, 50-420 Hz	$25 or 10%	1	
L2	Input 230V ±10%, 50-420 Hz	$25 or 10%	1	
L3	Input 460V ±10%, 50-420 Hz	$40 or 15%	1	
L4	Input 105-125V, 400 ±20 Hz	$25 or 10%	1	Reduce case size to next smaller. Derate ripple by 5X.
L5	Input 115/230V, 50-420 Hz	$50 or 20%	1	Input terminals parallel or series for 115/230 Volts.
DC INPUT VOLTAGES				
L7	Input 12 VDC (11.6 to 13.8 VDC)	$50 or 20%	1	Derate output to 60% of normal.
L8	Input 24 VDC (23.2 to 27.6 VDC)	$50 or 20%	1	
L9	Input 14 VDC (12.0 to 16.0 VDC)	$70 or 25%	1	Derate output to 60% of normal.
L10	Input 28 VDC (24.0 to 32.0 VDC)	$70 or 25%	1	
PROTECTION CIRCUITS				Available in all sizes except HA.
P1	Current limiting	$50 or 15%	1	Protects system circuit. Limits current to 130% of rated.
P2	Overtemp. cutout	$20	1	Limits base temp. to max. rated. Self restarting.
P3	Crowbar voltage limit	$60 or 15%	1	Protects power supply and system circuit under all circumsti Operates at 10% over maximum settable voltage or 1 volt, ever is greater. Remove input power to restart.
REMOTE PROGRAMMING				
R	Remote adjust (No pot provided)	No charge	None	Remote programming options allow power supply to be exte adjusted. Resistance to output ratio is approx. 5 mv per except for class C & D units under 8.5 volts which are ap mately 1 mv per ohm. For potentiometer requirements see pa
R1	Remote adjust with 1% linearity	$40 or 10%	1	
R3	Remote adjust with pot provided (A & B only)	$10	1	
OPTIONAL STARTING CIRCUITS				
S1	Start into 30,000 mfd/amp	$40 or 10%	1	Recommended for all capacitance loads over 500 mfd/amp
S2	Start positive output first	$20	1	
S3	Start negative output first	$20	1	
HIGH ISOLATION				
T	40 db transformer shielding	$40 or 15%	1	Reduces capacitance between line and circuit by 100X.
T1	100 db transformer shielding	$80 or 25%	1	Reduces capacitance between line and circuit by 100,000X.
HIGH FLOAT VOLTAGE				
U	Output float up to ±1000V	$20 or 10%	1	Either output terminal will withstand ±1000 volts to case or
RUGGEDIZED				
W	Potted for ruggedization (No internal potentiometer)			
	FA, GA, HA, JA	$5	1	
	KA, LA	$10	1	
	MA, NA	$15	1	
	PA	$20	1	
	QA	$25	1	
	RA	$30	1	
	SA	$35	1	
	TA	$40	1

DELIVERY: Class "A" and "B" Units — 2 Weeks
Class "C" Units — 3 Weeks
Class "D" Units — 4 Weeks
Some Options Extend Delivery

CEA, *a division of Berkleonics, Inc*
1221 S. SHAMROCK AVENUE, MONROVIA, CALIFORNIA 91016 TELEPHONE: (213) 359-9261

• specifications

Input Voltage and Frequency Range: 105 to 125 volts, 50 to 420 Hz.
Line Isolation: 20 db of shielding between primary and secondary of transformer.
Insulation Resistance: 100 megohms.
Operating Temperature Range: −20°C to +80°C.
Storage Temperature Range: −40°C to +85°C.
Recovery Time: As fast as 10μsec depending on model
Mounting and Terminations: Refer to Page 30.
Thermal Data: Refer to Page 25.

• standard features

Available with any center voltage between 3.5 and 500 volts. Floating output allows either positive or negative output biased to ±500 volts from case. Series starting circuitry allows two or more units to be operated in series without damage. Remote sense terminals provided. Voltage limiting circuitry prevents overshooting at turn on and off. Short circuit protection reduces shorted current to than 2% of rated current. Output adjustable with int potentiometer on classes A & B. Class C & D unit externally adjustable only (no internal pot.)

• optional features

The extra charge for each option is either a flat rate or a percentage of the base model price. Add the larger numb the base model price.

Symbol Option	Option Description	Prices	Delivery (Weeks Added)	Remarks
FIXED OUTPUTS				
F	Fixed output ±1.0%	No charge	None	Available in all classes. Delete "R" from class C & D P/N.
F1	Fixed output ±0.1%	$15	1	Available in classes B, C & D. Delete "R" from class C & D P/
F2	Fixed output ±0.01%	$50	1	Available in class D only. Delete "R" from class D P/N.
ADJUSTABLE OUTPUTS				
G	Output adjust range ±1%	$5	None	Increases output resolution.
Std	Output adjust range ±5%	No charge, std.	None	Provided unless a "G" or "F" option is specified.
G1	Output adjust range ±10%	$5 or 5%	1	Reduce maximum current to 80% of rated output.
G2	Output adjust range ±20%	$10 or 10%	1	Reduce maximum current to 60% of rated output.
G3	Output adjust range ±30%	$15 or 15%	1	Reduce maximum current to 50% of rated output.
G4	Output adjust range ±40%	$20 or 20%	1	Reduce maximum current to 45% of rated output.
G5	Output adjust range ±50%	$25 or 25%	1	Reduce maximum current to 40% of rated output.
Note: Next larger case size required for options G2, G3, G4 & G5. The temperature coefficient is degraded in classes B, C & D for options G2 t				
EXTENDED TEMPERATURE RANGE				
H1	Temp range −55°C to +80°C	$100 or 50%	4	Storage to −62°C.
H2	Temp range −40°C to +80°C	$20 or 20%	4	Storage to −55°C.
H3	Temp range −55°C to +115°C	$200 or 100%	6	Storage to −62°C.
RAPID PROGRAMMING INTO LARGE CAPACITANCE LOADS				
J	Voltage pull down circuit	$40 or 30%	2	Has circuit equivalent to an output resistor of one-tenth of ratec
AC INPUT VOLTAGE AND FREQUENCY				
L	Input 95-135V, 50-420 Hz	$10 or 10%	1	Derate maximum current to 60% of rated output.
L1	Input 208V ±10%, 50-420 Hz	$15 or 10%	1	
L2	Input 230V ±10%, 50-420 Hz	$15 or 10%	1	
L3	Input 460V ±10%, 50-420 Hz	$25 or 10%	1	
L4	Input 105-125V, 400 ±20 Hz	$15 or 10%	1	Derate ripple by 5X.
L5	Input 115/230V, 50-420 Hz	$30 or 20%	1	Input terminals parallel or series for 115/230 Volts.
PROTECTION CIRCUITS				
P1	Current limiting	$25 or 15%	1	Protects system circuit. Limits current to 130% of rated.
P2	Overtemp. cutout	$20	1	Limits base temp. to max. rated. Self restarting.
P3	Crowbar voltage limit	$30 or 15%	1	Protects power supply and system circuit under all circumst Operates at 10% over maximum settable voltage or 1 Volt, ever is greater. Remove input power to restart.
REMOTE PROGRAMMING				
R	Remote adjust (No pot provided)	No charge	None	Remote programming options allow power supply to be ext
R1	Remote adjust with 1% linearity	$20 or 10%	1	adjusted. Resistance to output ratio is approx. 5 mv per oh
R2	Remote adjust plus internal pot (A & B only)	$5	1	cept for class C & D units below 8.5 Volts which are approxi
R3	Remote adjust with pot provided (A & B only)	$5	1	1 mv per ohm. For potentiometer requirements see Page 28
START INTO HIGH CAPACITANCE LOADS				
S1	Start into 30,000 mfd/amp	$20 or 10%	1	Recommended for all capacitance loads over 500 mfd/amp.
HIGH ISOLATION				
T	40 db transformer shielding	$25 or 15%	1	Reduces capacitance between line and circuit by 100X.
T1	100 db transformer shielding	$50 or 25%	1	Reduces capacitance between line and circuit by 100,000X.
HIGH FLOAT VOLTAGE				
U	Output float up to ±1000V	$10 or 10%	1	Either output terminal will withstand ±1000 Volts to input.
RUGGEDIZED				
W	Potted for ruggedization (No internal potentiometer)	$10	1	Add no charge option "R" and letter "W" to model number.
W1	Potted for ruggedization (with internal potentiometer)	$25	1	Model number should not include either "R" or "F" c Internal potentiometer included.

Guaranteed free from defects in workmanship and materials for three years from date of shipm

card supplies CEA7 SERIES

REGULATED AC-DC TO 12 WATTS • BASE TEMPERATURE RATING 80°C

OUTPUT VOLTAGES ADJUSTABLE ±5% UNLESS OTHERWISE SPECIFIED

mplete part number for your power supply is established in easy steps:

ect the basic model from the appropriate voltage range, current ng, and class of regulation from the charts below.

e the exact center voltage desired in the open boxes of the el selected.

or the power supply to meet your specific requirements by ifying as many of the optional features from the opposite page lesired. Just add the option letter(s) at the end of the model cted.

ulation specifications

s of ation	Guaranteed Line Regulation for 10% Line Change	Guaranteed Load Regulation for No Load to Full Load	Guaranteed Temperature Coefficient Per Degree C	Guaranteed Stability for 40 Hours	Guaranteed RMS Ripple

cifications

aximum current obtainable in the CEA7 Series is 1.0 the maximum voltage is 60 volts, and the maximum power is 12 watts. All of these conditions must be met cting a card type supply.

-CEA's precision power supplies on a card — at less he new CEA7 Series card supplies have identical elec- pecifications to the CEA6 Series, including the avail- of four classes of regulation. The wide variety of s and currents modules are all on one size printed board and adaptable to any plug-in card or mounted chassis with four screws and six connections. The Series with Class C & D regulation make ideal refer- nits for many applications in computers and instru- ion systems.

Some Options Extend Delivery

CEA, *a division of Berkleonics, Inc.*
1221 S. SHAMROCK AVENUE, MONROVIA, CALIFORNIA 91016 TELEPHONE: (213) 359-9261

• specifications

Input Voltage Range: 21 to 30V DC (10.5 to 15V optional at no charge).
Line Isolation: 20 db of shielding between input terminals and output terminals.
Insulation Resistance: 100 megohms.
Operating Temperature Range: −20°C to +80°C.
Storage Temperature Range: −40°C to +85°C.
Recovery Time: 100μsec.
Mounting and Terminations: Refer to Page 30.
Thermal Data: Refer to Page 25.

• standard features

Available in any center voltage between 3.5 and 500 volts. Floating output allows either positive or negative output biased to ±500 volts from case. Series starting circuitry allows two or more units to be operated in series without damage. Remote sense terminals provided. Voltage limiting circuitry prevents overshoot at turn on or turn off. Sh circuit protection reduces shorted current to less than 2 of rated current. Output fixed within 5% of specifi Adjustable outputs available optionally.

• optional features

The extra charge for each option is either a flat rate or percentage of the base model price. Add the larger number to base model price.

Symbol Option	Option Description	Prices	Delivery (Weeks Added)	Remarks
FIXED OUTPUTS				
F	Fixed out ±10%	No charge	None	Standard for class A. Available for CEA2B and CEA2C.
F1	Fixed output ±1%	$15	1	CEA2C series only.
ADJUSTABLE OUTPUTS				
G	Output adjust range ±1%	$10	1	CEA2C series only.
G1	Output adjust range ±10%	$5 or 5%	1	CEA2B and CEA2C only.
G2	Output adjust range ±20%	$10 or 10%	1	CEA2B and CEA2C only.
Note: Adjustable units will have an internal potentiometer unless "R" option specified.				
EXTENDED TEMPERATURE RANGE				
H1	Temp. range −55°C to +80°C	$50 or 50%	4	Requires next larger case size. Storage to −62°C.
H2	Temp. range −40°C to +80°C	$15 or 15%	2	Storage to −55°C.
H3	Temp. range −55°C to +115°C	$100 or 100%	6	Requires next larger case size. Storage to −62°C.
INPUT VOLTAGE OPTIONS				
L	Input 10.5 to 15.0 VDC	No charge	None	
L1	Input 24 to 32 VDC	$10 or 10%	1	
SPECIAL CONNECTIONS				
N	Octal plug (replaces solder terminal)	$15	2	For mounting details see page 30.
PROTECTION CIRCUITS				
P2	Overtemp. cutout	$20	1	Set at base temperature rating. Self restarting.
P3	Crowbar voltage unit	$30 or 15%	1	Set at 1 Volt or 20% over max. rating, whichever is larger.
REMOTE PROGRAMMING				Remote program options allow power supply to be externally justed with resistance (5 mv/ohm).
R	Remote adjust (no pot provided)	No charge	None	Not available in CEA2A series.
R1	Remote adjust with 1% linearity	$20 or 10%	1	Available in CEA2C series only.
R2	Remote adjust plus internal pot	$5	1	Not available in CEA2A series.
R3	Remote adjust with pot provided	$5	1	For potentiometer requirements see Page 28.
START INTO HIGH CAPACITANCE LOADS				
S1	Start into 30,000 mfd/amp	$20 or 20%	1	Recommended for all capacitance loads over 500 mfd/amp.
HIGH ISOLATION				
T	40 db transformer shielding	$25 or 15%	1	Reduces capacitance between line and circuit by 100X.
T1	100 db transformer shielding	$50 or 25%	1	Reduces capacitance between line and circuit by 100,000X.
HIGH FLOAT VOLTAGE				
U	Output float up to ±1000V	$10 or 10%	1	Either output terminal will withstand ±1000 Volts to case or in
RUGGEDIZED				
W	Potted for ruggedization (No internal potentiometer)			
	FA, GA, HA, JA	$5	1	
	KA, LA	$10	1	
	MA, NA	$15	1

Some Options Extend Delivery

CEA, *a division of Berkleonics, Inc.*
1221 S. SHAMROCK AVENUE, MONROVIA, CALIFORNIA 91016 TELEPHONE: (213) 359-9261

• specifications

Input Voltage and Frequency Range: 105 to 125 volts, 50 to 420 Hz.
Line Isolation: 20 db of shielding between primary and secondary of transformer.
Insulation Resistance: 100 megohms.
Operating Temperature Range: −20°C to +80°C.
Storage Temperature Range: −40°C to +85°C.
Recovery Time: As fast as 10μsec depending on model
Mounting and Terminations: Refer to Page 30.
Thermal Data: Refer to Page 25.

• standard features

Available with any center voltage between 3.5 and 500 volts. Floating output allows either positive or negative output biased to ±500 volts from case. Series starting circuitry allows two or more units to be operated in series without damage. Remote sense terminals provided. Voltage limiting circuitry prevents overshooting at turn on and tur Short circuit protection reduces shorted current to than 2% of rated current. Output adjustable with in potentiometer on classes A & B. Class C & D units a ternally adjustable only (no internal pot.)

• optional features

The extra charge for each option is either a flat rate or percentage of the base model price. Add the larger number t base model price.

Symbol Option	Option Description	Prices	Delivery (Weeks Added)	Remarks
EXTENDED TEMPERATURE RANGE				
H1	Temp. range −55°C to +80°C	$100 or 50%	4	Requires next larger case size. Storage to −62°C.
H2	Temp. range −40°C to +80°C	$20 or 20%	4	Storage to −55°C.
H3	Temp. range −55°C to +115°C	$200 or 100%	6	Requires next larger case size. Storage to −62°C.
AC INPUT VOLTAGE AND FREQUENCY				
L	Input 95-135V, 50-420 Hz	$10 or 10%	1	Derate maximum current to 60% of rated output.
L1	Input 208V ±10%, 50-420 Hz	$15 or 10%	1	
L2	Input 230V ±10%, 50-420 Hz	$15 or 10%	1	
L3	Input 460V ±10%, 50-420 Hz	$25 or 15%	1	
L4	Input 105-125V, 400 ±20 Hz	$15 or 10%	1	Reduce case size to next smaller. Derate ripple by 5X.
L5	Input 115/230V, 50-420 Hz	$30 or 20%	1	Input terminals parallel or series for 115/230 Volts.
DC INPUT VOLTAGES				
L7	Input 12 VDC (11.6 to 13.8 VDC)	$35 or 20%	1	
L8	Input 24 VDC (23.2 to 27.6 VDC)	$35 or 20%	1	
L9	Input 14 VDC (12.0 to 16.0 VDC)	$45 or 10%	1	Derate output to 60% of normal.
L10	Input 28 VDC (24.0 to 32.0 VDC)	$45 or 10%	1	Derate output to 60% of normal.
PROTECTION CIRCUITS				Available in all sizes except FA.
P2	Overtemp. cutout	$20	1	Limits base temp. to max. rated. Self Restarting.
P3	Crowbar voltage limit	$30 or 15%	1	Protects power supply and system circuit under all circumst e Operates at 10% over maximum settable voltage or 1 Volt, ever is greater. Remove input power to restart.
REMOTE PROGRAMMING				
R	Remote adjust (no pot provided)	—	None	Remote programming options allow power supply to be exte
R1	Remote adjust with 1% linearity	—	1	adjusted. Resistance to output ratio is approx. 5 mv per ohr
R2	Remote adjust plus internal pot (A & B only)	—	1	linearity from 10% to 100% rated output. For potentiomet
R3	Remote adjust with pot provided (A & B only)	—	1	quirements see Page 28.
HIGH ISOLATION				
T1	40 db transformer shielding	$25 or 15%	1	Reduces capacitance between line and circuit by 100X.
T1	100 db transformer shielding	$50 or 25%	1	Reduces capacitance between line and circuit by 100,000X.
HIGH FLOAT VOLTAGE				
U	Output float up to ±1000V	$10 or 10%	1	Either output terminal will withstand ±1000 Volts to case or

ELIVERY: Class "A" and "B" Units — 2 Weeks
Class "C" Units — 3 Weeks
Class "D" Units — 4 Weeks
Some Options Extend Delivery

• technical specifications

Isolation: Input-to-output coupling capacity; less than 0.01, 0.001, or 0.0005 pfd.
Input-to-output DC resistance; greater than 100,000 megohms.
60 Hz leakage current less than .001μamps.

Input: 95-135 VAC, 50-65 Hz.

Output Voltage: Within 2% of the input voltage, from no load to full load.

Output Current: See model chart.

Efficiency: Better than 95%.

Mechanical: Unit has chrome handle, deep drawn case with grey baked enamel finish, 6 ft. shielded line cord, and non-scuff feet.

The new CEA Isolators are easily rack-mounted by removing the four mounting feet and using the ¼-20 inserts for bolt mounting.

• description

This new series of highly-shielded power Line Isolators offers the systems and laboratory engineers an opportunity to fully isolate electronic test equipment such as oscilloscopes, DVM's, power supplies, oscillators, amplifiers, counters, VTVM's and signal conditioning equipment. For example, with a Line Isolator connected between the power source and an oscilloscope, electrical measurements may be made without fear of tripping circuit breakers or blowing fuses because of power ground loops. Most high-frequency line transients are capacitance-coupled through standard power transformers (500 to 5000 pfd), and cause considerable unexplained interference. Reduction of such coupling capacity is the CEA secret to interference-free performance and high common mode rejection. CEA offers three choices of Line Isolators with reduced coupling capacity; 0.01 pfd, 0.001 fpd, and 0.0005 pfd. The effect of input-to-output coupling capacity is illustrated by the impedance of that capacity at various frequencies (5000 pfd for an unshielded transformer).

CEA shielded line isolators are also finding wide accepta among OEM manufacturers of computers and computer pheral equipment such as computer terminals. Line tr ents are coupled directly thru the unshielded power sup of such equipment and act as bona fide signals to the s tive I.C. circuits. For integral installation into OEM e ment, special physical packaging can be designed to ac modate the particular system space.

Recent investigations by safety conscious people in medical field have shown that stray currents in the ord 10 microamps can be dangerous to patients exposed to gical and intensive care instrumentation in hospitals. line isolators are capable of reducing line leakage cur to less than 0.001 microamps thus providing the nece safety factor between hospital instrumentation and pa

ielded line cords for isolator outputs

na optimum use of CEA Line Isolators, CEA offers specially designed shielded line cords in two styles and several lengths. e can be used as an extension cord for equipment that has a line receptacle mounted at the chassis (such as Tektronix es Style B has stripped and tinned leads on one end and can be installed into equipment as a direct replacement for un- ld line cords (such as Hewlett-Packard equipment). The plugs on these cords, as well as the cable, are shielded and are con- ct of the finest materials available. Other lengths, current ratings, and connectors are available on request.

THERMAL DATA

The basic limitation to the life of your CEA power supply is the upper temperature limit of the internal components. Most components are rated for a minimum of +85°C. In order to provide a safety factor, your CEA power supply is rated for continuous use at +80°C as measured at the base plate. All heat generating elements at mounted on internal heat sinks which are then mounted to the thick aluminum base plate. As long as the base plate does not exceed the maximum temperature, the internal components will be safe and give a good life.

As with most temperature affected items, the closer towards ambient that the unit is kept, the greater the life expectancy will be. The following data is based upon not having additional heat sinking beyond that of the supply itself.

The information presented in this section will enable the designer to determine if cooling is required and if so to select the most optimum method of cooling.

For modules with Thermal Curve Nos. 1, 2 and 3, heat dissipation area in addition to that provided by the standard module is not usually required for operation up to full load.

For modules with Thermal Curve Nos. 4 and 5, additi heat dissipation area such as the instrument chassis or dissipation radiators will usually be required for operatio full load.

The base (terminal end) is thermally connected to the po output transistor; therefore, the base must make posi mechanical and thermal bond to the mounting body. Silic grease should be applied to the base of the power su and the mounting body must be a smooth metallic surf

The maximum temperature the base will achieve, the dissipation area required, the airflow velocity in lineal per minute required or the maximum allowable ambient perature may be determined by following the appropr procedure given below.

The total heat dissipation area may be determined by tota the area given for the appropriate case size from Figur the effective surface area of the mounting body which be considered as heat dissipation area, and the area of selected CEA Thermal Radiators.

SIZE	FA	GA	HA	JA	KA	LA	MA	NA	PA	QA	RA	SA	TA
AREA sq. in.	10	13	16	22	27	31	38	44	58	79	108	130	156

figure 5 Heat dissipation area of standard power supply without heat dissipation radiators.

THERMAL RADIATORS

Models CEATR1 and CEATR2 Thermal Radiators are designed for use with all CEA6 Series and CEA5 Series Modular C Power Supplies and Voltage References. CEA Thermal Radiators may be mounted directly onto the module base or on the opposite side of the mounting body. The mounting hole configuration in the Thermal Radiators and the base of each Module are symmetrical so that the radiators may be mounted for airflow in either direction across the base of the Module.

Under some operating conditions it may be necessary to employ Thermal Radiators to provide the heat dissipation area required. Procedures to determine the required heat dissipation area are described on Page 26.

A coating of silicon grease should be applied on each mating surface of the Module, mounting body and Thermal Radiator. The mounting body must be a smooth metallic surface.

Case sizes MA through NA are designed for mounting one Model CEATR1 Thermal Radiator. Case sizes PA through TA are designed to accept multiple Thermal Radiators according to the requirements of the operating conditions.

Thermal Radiator Model No.	Radiation Area (sq. in.)	Dimensions A	Dimensions B	Weight (Pounds)	Price Each
CEATR1	75	1.000	1.93	0.75	$10.00
CEATR2	150	2.000	3.93	1.50	$15.00

Case Size		MA	NA	PA	QA	RA	SA	TA
Thermal Radiator	Model No.	CEATR1	CEATR1	CEATR1	CEATR2	CEATR2	CEATR2	CEATR2
	Quantity	1	1	2	2	2	4	4

Case 1

To be determined: **MAXIMUM TEMPERATURE BASE WILL ACHIEVE.**

Known: 1. Ambient temperature in °C.
2. Airflow velocity in feet per minute.
3. Heat dissipation area provided in square inches.

Procedure: 1. Choose the required Power Supply/Voltage Reference (voltage and current) from the tables in the catalog. The Thermal Curve Number for the selected unit is given in the next to last column on the chart.
2. Determine the Effective Thermal Curve Number by entering Fig. 6 or 7 (according to the intended operation of approximately 50% or 100% of load) along the X-axis at the known velocity of the air which will pass over the Power Supply/Voltage Reference. Proceed up the line representing this airflow velocity to the Thermal Curve Number selected in Step 1. Then proceed to the left to the Y-axis to determine the Effective Thermal Curve Number.
3. Enter Fig. 8 along the X-axis at the known Heat Dissipation Area. Proceed up the line representing this Heat Dissipation Area to the Effective Thermal Curve Number. Proceed to the left to the Y-axis to determine the Base Temperature Rise above ambient in °C.
4. Add the Base Temperature Rise above ambient determined in Step 3 to the known Ambient Temperature to determine the Maximum Temperature the base will achieve.

Case 2

To be determined: **HEAT DISSIPATION AREA REQUIRED.**

Known: 1. Ambient temperature in °C.
2. Airflow velocity in lineal feet per minute.
3. Maximum base temperature rating.

Procedure: 1. See Procedure No. 1 of Case 1.
2. See Procedure No. 2 of Case 1.
3. Enter Fig. 8 along the Y-axis at the known Maximum Base Temperature Rating. Proceed across the line representing the Maximum Base Temperature rating to the Effective Thermal Curve Number determined in Step 2 and then proceed down to the X-axis to determine the total Heat Dissipation Area required.
4. Subtract from the total Heat Dissipation Area required determined in Step 3, the Heat Dissipation Area of the Standard unit without Heat Dissipation Radiators to determine the additional Heat Dissipation Area required. Table 5 gives the Heat Dissipation Area of the Standard units without Heat Dissipation Radiators.
5. This additional Heat Dissipation Area may be supplied either by the chassis to which the Power Supply/Voltage Reference is mounted or by adding Heat Dissipation Radiators to the base of the Power Supply/Voltage Reference. The correct Heat Dissipation Radiator may be chosen from the table on Page 25.

Case 3

To be determined: **AIRFLOW VELOCITY IN LINEAL FEET PER MINUTE.**

Known: 1. Ambient temperature in °C.
2. Maximum base temperature rating.
3. Heat dissipation area provided in square inches.

Procedure: 1. See Procedure No. 1 of Case 1.
2. By subtracting the Ambient Temperature from the Maximum Base Temperature Rating, the maximum allowable Base Temperature Rise Above Ambient is determined.
3. Enter Fig. 8 along the Y-axis at this value of Maximum Base Temperature Rise Above Ambient and proceed to the right to the vertical line representing the Heat Dissipation Area provided. The intersection of these two lines defines the Effective Thermal Curve Number.
4. Enter either Fig. 6 or 7 along the Y-axis at the Effective Thermal Curve Number determined in Step 3 and proceed to the right to the intersection of that line and the Thermal Curve Number determined in Step 1. Proceed down from the intersection to the X-axis to determine the required Ambient Forced-Air in lineal feet per minute.

Case 4

To be determined: **MAXIMUM AMBIENT TEMPERATURE ALLOWABLE IN °C.**

Known: 1. Airflow velocity in lineal feet per minute.
2. Maximum base temperature rating.
3. Heat dissipation area provided in square inches.

Procedure: 1. See Procedure No. 1 of Case 1.
2. See Procedure No. 2 of Case 1.
3. See Procedure No. 3 of Case 1.
4. The Maximum Temperature allowable is then determined by subtracting the Base Temperature Rise Above Ambient from the Maximum Base Temperature Rating.

OPTIONS

Incorporation of the various options adds breadth to the standard line of Modular DC Power Supplies/Voltage References. The options are offered in an attempt to provide modules to satisfy a wide variety of applications without the added cost of one-time engineering charges. The added charges listed are added to the unit price given in the tables for each series before discounts are applied. The longe delivery option determines the added delivery time. S Page 5 for discount schedule and delivery of standard mo ules. Option designations selected should be added as suf to the model number. See Model Numbering System Page

fixed output voltage

Make an adjustable output module into a fixed output module with Option F

The output voltage of the Power Supply/Voltage Reference is factory set to the selected center voltage value within 1%, 0.1%, or 0.01% by means of an internally mounted precision wirewound resistor. Option designations are F, F1, and F In order to hold the accuracy of the F1 and F2 options, it necessary to specify a higher regulation class with comp able stability. See the option note for each series for exa requirements.

output voltage adjustment

Choose an output voltage adjustment range to meet each specific requirement with Option G

A wider or narrower output voltage adjustment range — standard module provide 10% (±5%) — can be ordered by specifying one of the G options. The internal voltage control (potentiometer) supplied only in Regulation Classes A and B has a nominal resolution of one (1) part per 1000. When Option R is also specified — standard in Regulation Class C and D — the resistance is external and the customer p vides the potentiometer or other voltage control. The ma mum current rating for the same center voltage is decreas with each wider adjustment range so that the relative pow rating, a maximum setable voltage, is approximately the sa as a standard adjustment range unit.

extended operating temperature range

Operate down to −55°C or up to +115°C with Option H

The low temperature range of the power supplies may be extended to −40°C or −55°C and the high temperature extended to +115°C by designating the following option letters (choose only one).

Temperature Range	Option Designation	Remarks
−55°C to +80°C	H1	Usually requires the next larger ca size. Storage temperature is −62°C
−40°C to +80°C	H2	Storage range is −55°C.
−55°C to +115°C	H3	Requires next larger case size.

rapid programming into large capacitance loads

Rapidly program with Option J

When operating into a large capacitance load, it is necessary to include a voltage pull-down circuit if rapid down-voltage programming is to be accomplished. This special circuit pears as a resistor across the output terminals equal to o tenth the rated load.

input power

Power from any available line with Option L

Select any one of the following options.

Input	Option Designation	Remarks
105-125V RMS at 50-420 Hz	Standard	Provided unless any other L option is specified.
95-135V RMS at 50-420 Hz	L	Reduce maximum current output to 60% of rated output.
208V ±10% at 50-420 Hz	L1	
230V ±10% at 50-420 Hz	L2	
460V ±10% at 50-420 Hz	L3	

Input	Option Designation	Remarks
400 Hz operation only (380 to 420 Hz), 105 to 125V RMS	L4	Case size may be reduced by one s smaller.
115-230V at 50-420 Hz	L5	Input terminals connected either parallel or series for 115-230 volt op ation.
Converter Operation Options		
12VDC	L7	11.6 to 13.8VDC unregulated.
24VDC	L8	23.2 to 27.6VDC unregulated.
14VDC	L9	12.0 to 16.0VDC unregulated.
28 VDC	L10	24.0 to 32.0VDC unregulated.

special connections

Specify an octal plug with Option N

The standard feed thru terminals are replaced with a standard male octal plug for convenience in breadboarding or other rapid replacement operations. It is necessary to also specify either Option "R" or "F" (both are no charge). Option N is not available with an internal potentiometer. The benefits shielding Options T and T1 are reduced when used w Option N. In order to reach the maximum shielding values is necessary to also use coaxial shielding input and out leads.

ection circuits

protection with Option P

CIRCUIT PROTECTION IS PROVIDED IN ALL UNITS.

LTAGE PROTECTION IS PROVIDED IN ALL UNITS.

age Limiting, including overshoot limiting due to or load change, is a solid state high speed switch. It utomatically.

Limiting, Option P1, is a fast response solid state ic reset system that limits the maximum output to f rated output current. Standard modules (without the current limiting option) have a foldback current limiting characteristic whereby the current increases to 200% to 300% and then begins to foldback to a short circuit condition at less than 2% of rated current.

Crowbar overvoltage protection, Option P3, clamps the output to less than 1 volt if for any reason the output voltage rises above trip voltage. Turn off to reset.

Overvoltage limiting, current limiting and thermal cutoff protections are available by designating any or all of the following options.

Limit	Provides Protection to	Option Designation	Remarks
rcuit current to ated current.	Power Supply	Standard	Standard in all units.
and turn off over- limited at 10% ximum settable or one (1) volt ver is greater.	System Circuit	Standard	Standard in all units.
f rated current.	System Circuit and Power Supply	P1	Requires next larger case for FA.
r trip voltage is er maximum e voltage or one (1) ichever is greater. input power to power supply.	System Circuit and Power Supply	P3	Requires next larger case for FA.
perature cutout	Power Supply	P2	Automatically switches off power supply when maximum base temperature is exceeded and switches on when temperature drops to a safe value. NOTE: By virtue of being a circuit between the transformer and the input, the normal high shielding effect of CEA transformers is downgraded with this option. The switch in effect adds back a measureable amount of coupling capacitance between line and circuit.

ernal output voltage adjustment

finger-tip output voltage control achieved with Option R

ARD IN REGULATION CLASSES C AND D. For Regulasses A and B, at no extra charge or added delivery, designation R permits the power supply to be exterand remotely) adjusted or programmed. Two terminals base of the power supply are provided for connection of an external potentiometer or fixed resistor. Low temperature coefficient and mechanically stable pots or fixed wirewound resistors consistent with the class of regulation should be used. For example, the external pot or wirewound resistor to be used with a Class C regulation unit should have a temperature coefficient of better than 10 parts per million per °C.

Regulation Class	External Control Temperature Coefficient	Regulation Class	External Control Temperature Coefficient
A	100 ppm/°C	C	10 ppm/°C
B	50 ppm/°C	D	5 ppm/°C

NOTE: For low voltage (below 8.4 Volts) units in classes C and D, the control value is 1 mv change/ohm.

all constant voltage supplies

ONSTANT CURRENT supplies (CEAC6 series), remote mming is accomplished by adding resistance to the e adjust terminals. With the terminals shorted, the outrrent will be at maximum. To decrease the output curn supplies rated at 1 amp and below, add approximately 1 ohm of resistance for each .1% of change wanted. For supplies rated above 1 amp, add 1 ohm per each .2% of change wanted. Constant current supplies may also be voltage programmed. Use zero to 1 volt for units 1 amp and below and zero to ½ volt for units over 1 amp.

special starting circuits

Achieve special starting with Option S

Large capacitance loads will appear as a direct short to all CEA supplies because of their short circuit protection feature. When starting into loads above 500mfd or 500mfd/amp rated, Option S1 is recommended. S1 allows starting into loads of 30,000mfd/amp to a maximum of 100,000mfd.

Standard dual output supplies may start at random wi either output starting first. Control over which output w start first can be specified with Options S2 and S3.

Starting Feature	Option Designation	Remarks
Start into 30,000 mfd/amp.	S1	Recommended for all loads over 50 mfd/amp.
Start positive output first.	S2	Applicable to dual output units only.
Start negative output first.	S3	

shielding / insulation

Stop high frequency line transient problems with Option T

A high degree of isolation can be provided by incorporating one of the two optional classes of shielding. High frequency line transients, normally capacity coupled through regulated power supplies, are attenuated by THINSHIELD the patent pending electrostatic shielding used in all CEA Modular DC Power Supplies/Voltage References. 20 DB SHIELDING WIT 100 MEGOHMS INSULATION RESISTANCE IS PROVIDED A STANDARD IN ALL CEA MODULES. For a higher degree shielding specify Option T or T1. Option designations a (choose only one of the two options):

Shielding	Insulation Resistance	Option Designation	Added Delivery	Remarks
20 db (transformer coupling capacity reduced by a factor of 10)	100 megohms input to output	Standard	None	Provided unless Option T or T1 is added to Model Number
40 db (transformer coupling capacity reduced by a factor of 100)	1000 megohms input to output	T	One Week	No change in case size
100 db (transformer coupling capacity reduced by a factor of 100,000)	10,000 megohms input to output	T1	One Week	No change in case size

high float voltage

Operate at ±1000 volts above AC power ground with Option U

All CEA supplies are rated for use at ±500 volts relative to case and AC power ground. A power supply with Option U has additional insulation so that the base of the power supply can be mounted (without an insulating panel) directly to grounded rack or tray and provide capability to operate tl DC output terminals at up to ±1000 volts DC with referen to the case and AC power ground.

ruggedized for shock and vibration

Watusi with Option W

Ruggedized construction for severe shock and vibration as required by military specifications necessitates potting of the module. This can be accomplished only with Remote Volta Adjustment (Option R), Fixed Output Voltage (Option F) or Hermetically Sealed Internal Adjustment Potentiometer.

Ruggedized with:	Option Designation
Option R or Option F	W
Hermetically Sealed Potentiometer (available only in Regulation Classes A and B)	W1

output impedance

Maximum output impedance at DC can be calculated from the change in output voltage caused by changing from no load to full load current. Example: for a 10 volt, 0.10 amp unit with Class C regulation, the maximum change in output voltage is 0.0025% x 10 volts or 0.25 millivolts for a change in current from 0 to 0.10 amp. The output impedance is therefore:

$Z_{dc} = \triangle V / \triangle I = 0.25$ mv/0.10 amp = 0.0025 ohms (max.)

The AC output impedance will remain approximately equal the DC output impedance from DC to 400 cps, then increa by a factor of 100 at 40 kcps, and finally flatten out at fr quencies to 600 kcps.

MOUNTING AND TERMINATIONS

venience in mounting and handling, the entire CEA over 100,000 power supplies are packaged in only 13 different case sizes. The physical dimensions and chassis cutout dimensions are given in the chart below.

dule dimensions:

A	B	C	D	E	F	H	J	K	L	Chassis Clearance Holes M	Chassis Clearance Holes N	Standard Wt. Lbs.	Potted Units Option W Lbs.	Volume Cu. In.

NOMINAL STORAGE CAPACITY IN AMPERE HOURS

These 115V, 60 Hz battery chargers are designed specifically for nickel cadmium and similar rechargeable cells. Average charge time for these chargers is 14 to 16 hours with no damage to cells or charger if the charger is left on indefinitely (See Fig. 1).

Variations of mechanical sizes and electrical specifications for every need are available on special request.

SOLID STATE *Invertron*

THE MOST RESPECTED NAME IN AC POWER ALL-SILICON SOLID-STATE POWER SOURCES

FEATURING

- 100 VA TO 2000 VA SINGLE-PHASE OUTPUT
- 100 VA 2ø TO 9000 VA 3ø OUTPUT
- SWITCHABLE OUTPUT VOLTAGE RANGES FOR FULL POWER AT LOWER VOLTAGES
- FREQUENCY RESPONSES FROM 45 Hz TO 20 KHz
- SINE-WAVE WITH LOW HARMONIC DISTORTION
- EXCELLENT LINE AND LOAD REGULATION
- BROAD CHOICE OF INTER-CHANGEABLE PLUG-IN OSCILLATORS
- OVERLOAD AND SHORT-CIRCUIT PROTECTION
- OPTIONAL INPUT VOLT-AGES: 117V1ø TO 460V3ø

Invertrons® have earned world-wide respect through their versatility, reliability, and outstanding performance. In addition to low distortion, high input stability and high power density, these silicon solid-state AC power sources use plug-in oscillators as frequency-determining elements and can be stacked electrically to provide two- or three-phase power. All Invertrons fit a standard 19" rack, or may be ordered with the appropriate cabinet for floor or bench use.

800T-SERIES PLUG-IN OSCILLATORS

Companion Plug-in Oscillators are available in three types: (A) General-purpose, fixed frequency; (B) Crystal-controlled, high-stability fixed-frequency; and (C) Continuously variable frequencies. All may be used with the Solid-State Invertrons to create 1ø, 2ø, or 3ø custom AC power sources tailored to exact requirements. The fixed-frequency oscillators may e ordered with a serve-feedback option for systems requi g extremely high amplitude stabilities and accuracies. S feature provides overall regulation of up to 0.01% aga t line and load changes.

Frequency Range	Frequency Accuracy at 25° C	Single Phase Model	Two Phase Model	Three Phase Model
800T VARIABLE FREQUENCY MODELS

CHARACTERISTICS COMMON TO ALL MODELS

INPUT

Harmonic Distortion: 10% maximum.

Isolation: 100 dB common mode isolation. One picofarad power transformer primary-to-secondary coupling capacitance. Low side of input normally strapped to chassis but may be floated to 300 V rms.

OUTPUT

Voltage Instability: ±0.05% for 24 hours under constant line, load, and ambient temperature conditions (±0.15% for Models 1040 and 1340).

Harmonic Distortion: 0.2% maximum (0.5% maximum for Models 1040 and 1340).

Line Regulation: 0.025% for 10 volt line change (Models 1050, 1060, 1350, 1360). 0.025% for 20 volt line change (Models 1052, 1062, 1352, 1362). 0.05% for 10 volt line change (Models 1040 and 1340).

Load Regulation: 0.025% for a zero to full load change (0.1% for Models 1040 and 1340).

Amplitude Temperature Coefficient: 0.005% per degree C maximum.

Peak Amplitude Instability: ±0.01 cycle to cycle.

TRANSIENT

Line (10% step change): Output transient will not exceed 0.5% peak amplitude.

Load (Zero to full load step change): Output transient will not exceed 0.5% peak amplitude.

Impulse Settling Time: 50 microseconds or less.

Overload Recovery Time: Automatically recovers in less than one cycle when overload is removed.

Overload Indication: Front panel lamp illuminates when load exceeds 1 KVA. Raw AC power is applied to load during period of illumination.

Overload Protection: Excessive overload condition actuates front panel circuit breaker.

GENERAL

Metered Input/Output: Switchable input/output monitoring on AC voltmeter. Meter accuracy ±3%F.S.

AC Ammeter: Output current is continuously monitored with an AC ammeter. Meter accuracy is ±5%F.S. for a sinusoidal current flow.

Ambient Temperature: 0 to 50° C.

Storage Temperature: —20° C to +85° C.

Cooling: A blower provides internal forced air circulation; air does not pass through front panel.

Front Panel Finish: Grey 26440. Fed. Std. 595.

NICKEL-CADMIUM "RPM" BATTERY CHARGER

AN ENTIRELY NEW & UNIQUE PRINCIPLE

Model BCA30-50-12BU-S

- **Complete** Automatic Recharge in only ½ to 1 hour
- Less Battery Memory, Cell Imbalance, Heating, Gassing & Loss of Electrolyte
- Higher Charging Efficiency
- Longer Battery Cycle Life
- One Universal All-Purpose Unit for different number of cells and 10 to 150 ampere-hours

CAPACITY TESTER

with "RPM" Charger

Model BCA30-50-12BBU-S

- Regulated Constant Current Discharge
- Ampere-hour Readout
- "RPM" Charger as above
- Automatic Programmed Charge-Discharge-Charge Cycle — 2½ to 4 hours total duration

CIRCUIT POWER, INC. POWER SUPPLIES

AC-DC MODULAR SUPPLIES

C-90 SERIES

OUR STANDARD SERIES featuring the greatest variety of p cisely regulated modules.

Base Operating Temperature . . . −20°C to +90°C

Input . . . 103-127 VAC, 47-420 Hz

Output Voltage . . . 3.0 to 600 VDC

Output Current . . . to 25 Amps

Output Power . . . to 800 Watts

Regulation . . . ±0.02%; ±0.05%; ±0.5%

LC-75 SERIES

LOWER PRICE SERIES

Base Operating Temperature . . . −20°C to +75°C

Input . . . 103-127 VAC, 47-420 Hz

Output Voltage . . . 3.0 to 150 VDC

Output Current . . . to 25 Amps

Output Power . . . to 750 Watts

Regulation . . . ±0.05%; ±0.5%

AN-100 SERIES

DESIGNED AND QUALIFIED FOR EXTREME MILITARY ENVIRONMENTS

Base Operating Temperature . . . −55°C to +100°C

Input . . . 103-127 VAC, 47-420 Hz

Output Voltage . . . 3.0 to 600 VDC

Output Current . . . to 25 Amps

Output Power . . . to 800 Watts

Regulation . . . ±0.02%; ±0.05%; ±0.5%

CIRCUIT POWER, INC. 227 MAIN STREET, PORTLAND, CONN. PHONE: 203-342-2520

CIRCUIT POWER, INC. POWER SUPPLIES

9 SERIES

OUR MINIATURE SERIES featuring not only more power per volume but a 50% output voltage adjust range.

Base Operating Temperature . . . −20°C to +90°C

Input . . . 105-125 VAC, 50-400 Hz

Output Voltage . . . 2.8 to 120 VDC

Output Current . . . to 30 Amps

Output Power . . . to 375 Watts

Regulation . . . Line . . . ±(0.05% +5 mv)
Load . . . ±(0.1% +15 mv)

FICIENCY TO 80%

DC-DC CONVERTERS

10 SERIES

Base Operating Temperature . . . −55°C to +100°C

Input . . . 21 to 30 VDC

Output Voltage . . . 2.8 to 120 VDC

Output Current . . . to 25 Amps

Output Power . . . to 240 Watts

Regulation . . . ±(0.1% +15 mv)

ALL OF CIRCUIT POWER'S SILICON POWER MODULES ARE PACKAGED IN STANDARD MIL-T-27 CASES

CIRCUIT POWER OFFERS THE FOLLOWING OPTIONAL FEATURES:

- 208 or 230 Volt Input
- Fixed Output Voltage
- Remote Sensing
- External Output Voltage Adjust
- Overvoltage Protection
- Temperature Coefficient to 0.002% per °C
- and many others!

MULTIPLE OUTPUTS — SPECIAL SIZES AND SHAPES

1 2 3 4 5 6

1. Basic Model Number Determines Wattage, Size an Mounting.
2. Input Voltage: This number indicates $E_{IN\,MIN.}$ on th regulated units and E_{IN} Nom. on the unregulated unit
3. Output Voltage: May be any voltage between 2 volt and 1500 volts AC or between 2 volts and 6000 volt DC.
4. Rectifier System: Select for applicable output voltag refer to unit pricing column.
5. When a positive ground is required add +F after re tifier system. Nothing is added for negative ground.
6. Modifications:
   —P for program connection.
   —E for enable operation.

GAS LASER APPLICATION

A special rectifier system can be furnished that i corporates a self-starting feature for He-Ne g lasers. The output voltage will raise to appro imately 7Kv then reduces to about 3Kv upon ig tion of the plasma tube. The output voltages a current limiting can be furnished to your specific tions.

Crestronics' Engineering Staff Will Design to Your Specifications

OUTPUT INFORMATION

POWER

On regulated units the power is specified with an input differential of 4 volts and an $E_{IN\ MIN.}$ of 22 volts.

For an input differential of greater than 4 volts, derate output to:

$$\text{Watts derated} = .7\ E_{IN\ MIN.} \frac{.5\ \text{Watts rated}}{\Delta E_{IN} + 3.7}$$

For a minimum input voltage of less than 22 volts, derate output power to:

$$\text{Watts derated} = \text{Watts rated}\ \frac{E_{IN\ MIN.}}{22}$$

On unregulated units the output power will be expressed as:

$$\text{Watts} = .8\ E_{IN}\ I_{IN}$$

With output voltages lower than 15 volts, derate output power to:

$$\text{Watts derated} = \text{Watts rated}\ \frac{\text{Output Volts} + 15}{30}$$

VOLTAGE

Regulated units

The nominal output voltage is specified in the model number and may be screwdriver adjusted from +5% to —30%.

Unregulated units

The output voltage will be proportional to the input voltage. The input/output voltage ratio will be specified in the model number.

ISOLATION

All outputs greater than 100 VDC will be isolated to 6000 VDC. All outputs less than 99 VDC will be isolated to 100 VDC. Isolation resistance will be greater than 10K Meg. For special isolation requirements call our engineering department.

10 to 24 VOLTS 6%
25 to 6000 VOLTS 4%

RIPPLE ALL SYSTEMS

VD., VQ. 3%
ALL OTHERS 2%

1. On output voltages less than 20 volts the switching spikes will be about 100 mv p-p. These can be easily reduced by adding a capacitor on the output terminals.
2. Because of common mode ripple it is necessary to know when a positive ground system is used (see ordering information).
3. The conversion frequency will be approximately 23KHz at nominal input and output voltages.

HIGH VOLTAGE EQUIPMENT

HIGHLY REGULATED ADJUSTABLE HIGH VOLTAGE MODULES SERIES "HRM"

SPECIFICATIONS

Input: 115V ±10% 60 cps
Output: Regulation for 10% line change .03% max. Regulation for NL to FL .03% max
Ripple: .03% RMS max
Temp. Range: −54°C to +65°C operating
Temp. Coefficient: 0.02%/°C

- No voltage overshoot
- Adjustable output
- Short circuit proof (no fuses)
- Meet environmental and transient requirements of MIL-E-16400

REGULATED MODULES TRANSISTORIZED SERIES "TRHV"

The TRHV series of regulated power supplies are all solid state units. Reference and regulating circuitry is accomplished at low voltage. The units are completely self-contained and require only 115 Volt AC 60/400 cycle excitation to be operative. These supplies are rugged and feature good line, load and thermal stability. The operating temperature range is −20°C to +55°C. Regulation better than 0.25% for 10% line change & NL to FL. Ripple 0.5% RMS at max current.

UNREGULATED MODULES COMPACT HIGH VOLTAGE

SERIES "S"

These power supplies are designed for operation from either a 0-115 volt or 0-125 volt line at 60/400 cycles. Three input terminals are provided to permit proper line connection. The output is available from shielded polyethylene cables and may be varied over the full range by varying the input AC line. The two output cables are insulated for the full output voltage, so that either the positive or negative terminal may be grounded.* All units have selenium rectifiers and are hermetically sealed in an epoxy, vacuum filled, metal case.

Units for 50 cycle operation at various line voltages are available on request.

*Model 40-2-4 is designed with one output cable for single polarity operation. When ordering, please specify polarity.

*Single polarity unit, state positive or negative output.
**Ripple at 400 cycles is 15% of ripple at 60 cycles, shown above.

SERIES "O" OIL INSULATED TANK UNITS

DEL SERIES "O", oil insulated, High Voltage Power Supplies offers one of the most comprehensive lines of basic high voltage units available to industry and laboratories. These D.C. supplies are designed to provide long, reliable service in such applications as dielectric testing, capacitor chargers, electrostatic precipitators, electron microscopes, image intensifiers, plasma research and accelerators. Series "O" supplies feature reversible polarity on most units, shielded polyethylene output cables, high quality insulating oil in dust free tank, quiet, long life operation with low corona.

"HIGH POT" TESTERS
"TC" SERIES POWER SUPPLIES

DEL TC Series multi-purpose D.C. Power Supplies are compact, fully instrumented and fully protected units providing ratings up to 80,000 volts D.C. continuously variable.

Seleninum Rectifiers used throughout to provide long life and instantaneous operation. No filament warm up time required.

All high voltage components immersed in special high grade insulating oil. This assures LONG trouble-free LIFE.

ALSO AVAILABLE FOR OTHER INPUT AND OUTPUT VOLTAGES

LHRM SERIES

The Del LHRM Series of High Voltage Power Supplies offer the HRM module power supply with its high regulation, low ripple, short circuit protection and other desirable features in a lab. type rack mountable supply.

Full voltage control by ten-turn potentiometer, ammeter and voltmeter, line switch, etc., make this unit essential in lab. development and testing of high voltage equipment such as high resolution CRT displays, and other applications requiring a precision high voltage power supply. It offers the great advantage in that the characteristics are identical to the HRM modules which can be then utilized in the final equipment.

FEATURES

- Short Circuit Proof
- Full Adjustable Output
- Excellent Thermal Stability
- No Voltage Overshoot on Turn On or Turn Off
- Single Shielded Output Cable
- Fast Response
- No Warm-up Required
- All Silicon Transistors
- No r.f.i., Chopper or Hhigh Frequency Oscillator
- Automatic Resetting Thermal Cutout

Enhances selection of final power supply module.
Ten Turn Potentiometer with 0.15% Linearity.

SPECIFICATIONS — ALL MODELS

INPUT: 115V ±10% 60 to 400 Hz. single phase for units up to 10 KV.
115V ±10% 60 or 400 Hz. for units 15 KV and above.

OUTPUT: See table

REGULATION:
LINE: Less than 0.03% from 50% to 100% of max. rated output voltage increasing to 0.5% at 10% of max. rated output voltage for a ±10% line votlage change.

LOAD: Same as line regulation above from no load to full load.

RIPPLE: Less than 0.03% rms of max. rated output voltage.

LINEARITY: Better than 0.15" with a ten turn potentiometer. Models marked (*) 0.7%.

"HI-POT" TESTERS

Del D.C. "HI-POT" supplies are fully instrumented and fully protected units providing output voltages up to 160,000 volts D.C. Supplies are well designed to provide conservative ratings.

Thirteen models offer a wide selection to meet all applications. Portable units as well as floor type with rack mountable control panels* are available

Input 115 VAC - 60 cycle.

AUXILIARY EQUIPMENT

TRANSISTORIZED FREQUENCY CONVERTERS

ATA SERIES

The ATA Series of frequency converters is a source of stable 400 cycle power which operates directly from a standard 50 to 60 cycle line. These units feature excellent frequency characteristics, waveform purity, voltage regulation and low dynamic impedance.

SPECIFICATIONS

INPUT VOLTAGE	105-125 VAC, 50-70 cps
OUTPUT VOLTAGE	Adj. 105-125 VAC
OUTPUT FREQ.	400 cps, adjustable, 398 to 402 cps.
DISTORTION	0.8%, Max.
POWER FACTOR	±0.7 to Unity
VOLTAGE REG.	
LOAD	Within 0.5% for no load to full load.
LINE	±0.5% for 105-125 V
METERS	Output voltage and current.
CONSTRUCTION	Designed for rack mounting.

MODEL	OUTPUT V.A.	SIZE W x D x H (in.)	TYPE
ATA 400RS-100	100	19 x 16 x 3½	Regulated
ATA 400RS-500	500	19 x 16 x 8¾	Regulated
ATA 400RS-1000	1000	19 x 16 x 14	Regulated

TRANSISTORIED DC/AC INVERTERS

DTA 60 SERIES

The DTA 60 Series of DC to 60 cycle AC and the DTA 400 Series of DC to 400 cycle AC inverters include regulated units, for those applications requiring precise output voltage, and unregulated units where the output voltage is not critical. All units operate from a 22 to 30 volt DC source, are capable of frequency synchronization to an external source, and are protected against overvoltage, reverse polarity, overload and over-temperature.

SPECIFICATIONS

INPUT VOLTAGE: 22-30 VDC
OUTPUT VOLTAGE: 115 VAC for regulated units; 115 VAC Nom. with ±10% taps for unregulated units.
POWER FACTOR: ±0.7 to unity.
DISTORTION: 2½% for DTA 60 Series 0.8% for DTA 400 Series.
VOLTAGE REG. LOAD: Approx. 6% for 50% load change, unregualted units. 0.5% no load to full load for regulated units.
LINE: Output proportional to input for unregulated units.
0.5% for 22 to 30 VDC for regulated units.
FREQUENCY REG. 60 SERIES: 0.5% for 22 to 30 VDC
0.5% for no load to full load.
400 SERIES: 0.2% for 22 to 30 VDC.
0.2% for no load to full load.
ISOLATION: Between input, output, gnd.
HOUSING: Modular, with heat radiating finish.
MOUNTING: Tapped inserts in base.
TERMINATIONS: Input, output, ground and synchronization signal, all available under removable access plate.

METER MULTIPLIERS

Del Electronics' line of multipliers is designed and built to provide high voltage DC measurements with safety and minimum corona at reasonable cost. Each unit consists of resistors immersed in high grade insulating oil and hermetically sealed grounded case. All units are designed for use with 100 ua full scale meter. Can be furnished with panel type 4½" rectangular 100 ua meter (2% accuracy), with KV scale to match.

TRANSFORMERS

ISOLATION TRANSFORMERS

Model 2-TR-250-21

DEL ELECTRONICS' line of High Voltage Isolation Transformers are designed and manufactured for use in industry and in research and development laboratories.

These DEL High Quality Transformers have the following features:

- Complete vacuum varnish impregnation
- Immersed in high grade insulating oil
- Electrostatic shield between primary and secondary
- Good regulation

HIGH VOLTAGE

STABLE | **REMOTE PROGRAMMING OPTIONS** | **UP TO 30 KV DC**

SERIES ONE OUTPUT TO 30 KV

WIRELESS EPOXY CONSTRUCTION

2000 SERIES 1 OR 2 OUTPUTS TO 7.5 KV

ANY OPTIONS AVAILABLE
CURRENT, 5 PPM/°C T.C., Etc.

HIGH VOLTAGE SYSTEMS SUPPLIES GENERAL SPECIFICATIONS

CRT MULTIPLE HV ASSEMBLIES OUR SPECIALTY

OTECTION — Completely short-circuit proof. Self restoring after short removal.

105-125 volts; 47-440 Hz

RE RANGE — Operating 0°C - 50°C

UTS — Available on 2000 series, consult factory.

– CPS provides mating connectors except on models ending in 05.

FIXED OUTPUT — Specify output desired from range. ±5% adjust provided.

WIDE RANGE OUTPUT (Remotely Programmable) — Specify option "R" (costs $25) and select RPA from list at bottom right of page.

SIZE — 4½" wide, 4⅝" high, 9" long.

ACCESSORIES

HIGH VOLTAGE DIVIDER PROBE HVP-250

.....Up to 50 KV DC
.....1000:1 50 KV IN = 50 V OUT
.....250 MΩ
.....250 KΩ
URACY .....0.01% up to 30 KV, 20-30°C
RE COEFFICIENT .....10 PPM/°C
.....12 inches
.....$395

HIGH VOLTAGE CONNECTORS

HVC-30P—High voltage plug ..... $ 30
HVC-30F—High voltage flange and threaded banana jack 5
HVC-30R—High voltage receptacle 35
HVC-30C—High voltage shielded coupler 35
HVC-TC —Tri coupler 45
HVT-30 —Test module (less dividers) 150

REMOTE PROGRAMMING ASSEMBLIES

RPA-1: Encased 10 turn pot with knob .....$ 75.00
RPA-2: Small encased 10 turn pot with digital dial 170.00
RPA-3: Encased assembly of step switches and vernier digital dial. AC power control is provided 245.00
RPA-6: 22 turn panel mounted pot with screwdriver adjustment 45.00
RPA-7: Same as RPA-2 except case is larger 150.00

REGULATED POWER SUPPLIES

CUSTOM ENGINEERING: In addition to standard catalog power supplies Deltron offers complete engineering of CUSTOM POWER SUPPLIES designed to meet your specific requirements. Multiple outputs — wide range — special packaging. Deltron guarantees performance to your specifications.

ACCESSORIES AND OPTIONS: Deltron offers a complete line of accessories, such as crowbars, meter panels, rack adapters, including options of wide slots, 230 VAC operation and other features.

Mating Connector Available — Model J2 ..... $3

Very low cost compact card modules with d tracking or independent outputs. Series and parallel operation.

Over-Under Voltage Relay Models VK50-200 ..... **$30**

SP SERIES

These precision lab supplies all contain integrated circuit regulator systems, automatic crossover from constant voltage to constant current, 2% accurate meters, remote sensing and programming. SP Series have fast response SCR pre-regulators.

DB FIRST IN DC POWER

SHORT FORM CATALOG

NEW HIGH PERFORMANCE, LOW PROFILE, FIXED VOLTAGE ALL SILICON DC POWER SUPPLIES

These new low profile, convection cooled, all silicon, ±10% voltage adjustable DC Power Supplies have premium performance characteristics plus important extra features—at no extra cost!

The extra features combined with Dressen-Barnes' 23 years of power supply experience and an unconditional 5 year warranty assure you of the best power supply available at a highly competitive price.

All units feature integrated circuit regulators, military specification wire and finish, plug-in circuit boards, dual filter capacitors, automatic current limiting and an automatic thermostat for overheating protection. The units can be mounted on any one of three surfaces or rack mounted.

Remote sensing, remote voltage adjustment and remote program are standard features.

EXTRA FEATURES AT NO EXTRA COST

- .01% +1mv line regulation ■ .02% +1mv load regu
- ½mv RMS ripple ■ Built-in ±10% voltage adjustment
- Paralleling capability

OPTIONS AVAILABLE AT EXTRA COST

■ Overvoltage load protection ("L" option) ■ High humidi eration ("H" option) ■ Fungus proofing ("F" option)

See bac for war

SPECIFICATIONS FOR SUPPLIES MODEL 301 THROUGH 901

Regulation: Line: .01% +1mv for line variation from 105 to 132VAC.
Load: .02% +1mv from zero to full rated load.
Ripple: ½ millivolt RMS with plus or minus output terminal grounded, at 60 Hz and 115VAC line input.
Temperature Range, Operating: −20°C to +71°C continuous duty.
Temperature Range, Storage: −55°C to +85°C.
Input Voltage: 105 to 132VAC, 50 to 440 Hz. 205 to 265VAC, 50 to 440 Hz at no extra cost ("V" option).
Transient Recovery: Less than 50 microseconds.
Temperature Coefficient: .01% per degree centigrade.
Overload Protection: Automatic current limiting at 110% to 130% of rated current. Automatic recovery on removal of overload.
Remote Sensing: Standard feature.
Remote Voltage Adjustment: Standard feature. (except 900 series)
Remote Programming: 100 ohms per volt. (except 900 series)
Thermal Protection: Built-in thermostat on heat sink. (except 900 series)
Relative Humidity: 75%.
Input and Output Connections: Heavy duty terminal block on rear of chassis.
Finish: Black anodized aluminum, black semi-gloss enamel Fed. Std. 595, Color 27038.
Paralleling Capability: Built-in for paralleling without modification to power supplies.

OPTIONS

AC Input Option: Add suffix "V". All units are available with 205 to 265VAC, 50 to 440 Hz at no extra charge.
Overvoltage Load Protection Option: Add suffix "L". Protects easily damaged loads from overvoltage transients.
High Humidity Option: Add Suffix "H" for 95% relative humidity operation.
Fungus Proofing Operation: Add suffix "F." Treatment with MIL-V-173 varnish protects circuits from fungus.

NEW PRODUCT LINE

DB is currently developing a line of Constant Voltage Power Supplies for specific applications. Specifications and prices are available upon request from the factory.

RACK ADAPTERS

Standard 19" or special racks to customer requirements can be supplied for mounting combinations of the above power supplies. Consult the factory with your requirements (outputs, meters, controls, etc.).

NOTES TO TABLE

*The model number consists of the ser indicated plus a dash number to indic voltage. Examples: The model num 301-5 is a 5 VDC, 3.7 Amp at 4 unit; the 301-28 is a 28 VDC, 1.3 A at 40°C unit. Note that current rati vary with temperature.

**Output voltage is adjustable to ±5 Higher currents available on special der. Built-in ±10% adjustment usa up to 85% of rated current.

PRICING

ions contact factory.
livery information for these models and other models, from 1-200V, available from the factory.
umber consists of the series indicated, plus a dash number to indicate voltage. Examples: The model number VDC, 750 MA unit; the 30-28S is a 28 VDC, 1.13 AMP unit.
an be adjusted 10% in voltage by a screw adjustment on the supply. Slight current derating will result. ry for exact values.
er Minute over the surfaces of the power supply. Temperature is of the air, measured 2 inches up stream.
ations can be made to fit individual customer requirements. For example: different input voltages, parallel operation tput voltage swings. Consult the factory for your specific modification requirements.

OLTAGE LOAD PROTECTOR (OVLP)

ervoltage detection

TYPICAL UNITS

Prices start at $20 1-24 price

DB Electronics power supplies and other equipment requiring overvoltage protection. Primarily protecting IC circuitry from line transients but can also be used to protect any load sensitive or continuous overvoltage conditions. Features high speed overvoltage detectors in conjunction r" SCR. Units available in fixed and variable trip voltages. SCR's are sized for current loads.

d specifications subject to change without notice. Minor modifications can be made on all units to meet customer requirements. Quantity discounts on 25 units or more, depending on the model, available from the factory.

set factory for nominal value ±2%. Unit may be adjusted within range indicated.
mat necessary to adjust the unit to any output within the range specified furnished with each unit.
32 volts, maximum current is from 55MA at 340V to 50MA at 350V.

ZED POWER SUPPLIES

Dressen-Barnes makes many modifications to its standard lines of power supplies to meet special or custom supply requirements of its customers. These fall into three general types of modifications:

Type I

tip output packages made from sse lies of standard modules

Type II

Modification of Standard units to meet special customer requirements.

Type III

Standard Circuitry in special packages for volume requirements to meet customer specifications.

his road capability and with our modern Quick Reaction Facilities, Dressen-Barnes over the past 22 years has delivered nearly 4,000 different models of custom power supplies.

WARRANTY

-Ba s Electronics Corporation warrants each power supply manufactured by b ree from defects in material and workmanship, for a period of five years e of delivery to the original purchaser, except for vacuum tubes which are ed one year.

-Ba s obligation under this warranty is limited to servicing or adjusting any sup returned to the factory for that purpose, and replacing any defective ere If the failure has been caused by misuse, operation in excess of specifi- gua tees or modification by the customer, repairs will be billed at cost.

Permission must be obtained from Dressen-Barnes before a supply may be returned for warranty examination. Transportation charges are to be prepaid. Warranty is transferable by the original purchaser as received from Dressen-Barnes and/or for use in original equipment. This warranty is expressly in lieu of all other obligations or liabilities on the part of Dressen-Barnes Electronics Corporation and Dressen-Barnes Electronics Corporation neither assumes nor authorizes any other person to assume for them, any liability in connection with the sale of Dressen-Barnes power supplies.

ces nd specifications subject to change without notice. Minor modifications can be made on all units to meet customer requirements. Quantity discounts on 25 units or more, depending on the model, available from the factory.

Elcor ISOLATION* DC POWER AND TRANSFORMER MODULES LOW NOISE

PRODUCT DC POWER MODULES	FEATURES		USES
ISOVAR  For Automatic Voltage-to-Current Regulation	▪ Low capacitance from ac input (primary) to dc output. ▪ Automatic change from voltage to current regulation. ▪ 0 to 36 vdc output, up to 175 ma. ▪ Control resolution 0.02%. ▪ Output load regulation—0.002%. ▪ Output line regulation—0.001%, voltage or current.	▪ Ripple 0.001% (+100 μV p-p or 2 μA p-p). ▪ Remote sensing. ▪ 5.25 in. H. x 1.4 in. W. x 16.5 in. D. (allows 12 channels in 19" rack adapter.) ▪ Provided with signal conditioner within same package as option.	▪ Eliminate noise. ▪ Provide power for pre instrumentation. ▪ Energize low-level ci ▪ Protect delicate mea ment circuits. ▪ Provide floating dc po ▪ Prevent ground loops.
DUAL ISOPLY® Precise Tracking Power Modules  	▪ ±15 vdc, 300 ma output. ▪ Isolated power for op-amps. ▪ —15 V output tracks +15 V output.	▪ Separate transformer, rectifier, and regulator modules. ▪ 1 in. H. x 3 in. W. x 6 in. L.	▪ Op-amp supply. ▪ Low noise circuits. ▪ Compact power fo board mounting. ▪ IC supply.
ISOPLY® Power Modules 	▪ Highly isolated dc supplies. ▪ From 1 to 300 vdc, 2 to 800 ma output. ▪ Ripple less than 0.005%. ▪ Regulation to 0.02%.	▪ Low temperature coefficient. ▪ Remote sensing. ▪ Plug-in, chassis, or rack mounted.	▪ Battery substitutes. ▪ Precision measureme cuits. ▪ Bridge circuits. ▪ Low-level measurem ▪ Ungrounded amplifier ▪ Servo references, fi bias. ▪ Ground loop decoupli ▪ Voltage references.
ISOLATION TRANSFORMERS			
ISOFORMER® 	▪ High degree of direct capacitive and conductive isolation. ▪ Efficient transfer of energy. ▪ Extremely low leakage current. ▪ Low primary to secondary capacitance.	▪ Line isolation to secondary < .001 pF. ▪ Leakage resistance—10^{12} ohms. ▪ 6.3 to 600 volt output for 4 and 25 watt models. ▪ Unique air-gap construction eliminates primary-to-secondary shorts.	▪ Low-noise power sup ▪ Bridge circuits. ▪ Medical instrumentat ▪ Systems ground loop nation. ▪ Electrometer circuits, filament supplies.
 **POWER** Isolation Transformers	▪ Eliminate unwanted noise in ground circuits. ▪ Provide low leakage currents.	▪ Isolate measurement circuits from common-mode noise. ▪ Available up to 6 KVA.	▪ Hospital safety progr ▪ Low noise application ▪ Instrument isolation.
INSTRUMENTS Current Indicators and Integrators 	▪ Integrates any proportional current or voltage. ▪ Sensitive and accurate current meter (to 3×10^{-10} amp sensitivity.) ▪ Internal calibration.	▪ Developed for use with high-voltage particle accelerators. ▪ Pulsed current filter also available.	▪ Precision measureme ▪ Integration of propo current or voltage, s radiation, temperatur ▪ Automatic process c

*Power modules with output circuitry highly isolated conductively and capacitively from ground (case) and ac input. Battery equivalent with variable voltage.

Specifications

Input: 105 — 125 vac, 47 — 420 Hz.

Output (floating): Volts and current: See Table of Models.

Regulation Combined: ±0.05% or 1.5 mv, whichever is greater for a combined ±10 vac input change and 0 to full load change.

Ripple: 0.002% or 1 mv, rms, whichever is greater.

Temperature Coefficient: ±0.01%/°C or 1.2 mv/°C, whichever is greater, over the range of −20°C to +60°C.

Voltage Adjustment: ±5 % at rated load. ±10% at 90% load.

Resolution of Adjustment: 0.4% or 30 mv, whichever is greater.

Temperature Operating: −20° to +71°C ambient (See current rati at 3 temperature).

Temperature Storage: −62°C to +85°C.

Remote Sensing, Remote Programming, Over Temperature Protecti Provided on all models.

Electronic Short Circuit Protection: Set for approx. 125% rated lo

D Series Modular DC Regulated Power Supplies 72-Hour Delivery, Fully Accessible, Fully Repairable, All Silicon

Specifications

Input: 105 — 125 vac, 47 — 420 Hz.
Output (floating): Volts and current: See Table of Models.
Regulation combined:
"A" MODEL — ±0.05% or 1.5 mv, whichever is greater, for a combined ±10 vac input change and 0 to full load change.
STD. MODEL — ±0.5% or 25 mv, whichever is greater, for a combined ±10 vac input change and 0 to ful load change.
Ripple:
"A" MODEL — 0.002% or 1 mv, rms, whichever is greater.
STD. MODEL — 0.01% or 5 mv, rms, whichever is greater.
Temperature Coefficient:
"A" MODEL — ±0.01%/°C or 1.2 mv/°C, whichever is greater, over the range of −20°C to +60°C.
STD. MODEL — ±0.04%/°C or 4.8 mv/°C, whichever is greater, over range −20°C to +60°C.
Voltage Adjustment: ±5% @ rated load.
±10% @ 90% load.
Resolution of Adjustment:
"A" MODEL — 0.4% or 30 mv, whichever is greater.
STD. MODEL — 0.7% or 70 mv, whichever is greater.
Temperature, operating: −20° to +71°C ambient (Base of supply must be held at 80°C or less by heat sinking).
Temperature storage: −62°C to +85°C.
Electronic Short Circuit Protection: Set for approx. 150% rated load.
Overtemperature protection: Provided on all models.
Optional Features — see optional features page.

SIZE G 2.2 lbs.
2-5/8 x 3-1/16 x 4-5/16
SIZE H 3.0 lbs.
3-1/16 x 3-9/16 x 4-15/16
SIZE F 1.9 lbs.
2-3/8 x 2-3/4 x 3-7/8
SIZE J
3-3/8 x 3-15/16

SIZE H (open)

K & KH Series Dual Output Modular DC Power Supplies 72-Hour Delivery, Fully Repairable

Specifications

Input: 105-125 VAC, 47-420 Hz.

Output: Volts and current: See model description. Master output (positive voltage) adjustable.
Slave output (negative voltage) set within ±1% of master output.

Regulation, combined: ±0.1% for a combined ±10 VAC input change and 0 to full load change.

Ripple: 2 mv, rms.

Tracking: Negative output will track with positive output to within ±0.02%/°C.

Temperature Coefficient: ±0.03%/°C, over range −20°C to +60°C.

Voltage adjustment: ±1 VDC.

Temperature, operating: −20°C to +71°C (Base of K series enclosures must be held at 80°C or less by heat sinking).

Electronic Short Circuit Protection: Set for approximately 150% rated load.

Overtemperature protection: Provided on all models.

Resolution of Adjustment: 70 MV.

Optional Features — see optional features page.

Special Voltages and Currents available on request in quantities of 25 units or more.

DYNAGE, INC., Bloomfield, Connecticut 06002/203-243-0315/TWX 710-425-6063

Optional Features

OVED COMBINED VOLTAGE REGULATION,
& KH SERIES ONLY
Suffix "A" — Added Cost $10.00
ombined voltage regulation of ±0.05%. To order add a suffix "A" to the odel number

& H SERIES ONLY
Suffix "AA" — Added Cost $10.00 or 5% whichever is greater
ombined voltage regulation of ±0.025% or ±0.75 mv, whichever is reater.

Suffix "AAA" — Added Cost $30.00 or 15% whichever is greater
ombined voltage regulation of ±0.01% or ±0.5 mv, whichever is greater. his feature should only be ordered in conjunction with suffixes "F" or FF" or "R" or "P" and "T".

OUTPUT
Suffix "F" — No Added Cost
utput fixed as specified within model range to ±1% or ±50 mv, whichver is greater.

Suffix "FF" — Added Cost $5.00 or 3% whichever is greater
utput fixed as specified within Model range to ±0.25% or ±15 mv, whichver is greater.

TE SENSING Suffix S — Added Cost $5.00
ERIES
wo (2) additional terminals are provided in the base of the supply for onnection to the remotely located load. Voltage drops in the load lines hould not be allowed to exceed 0.5 vdc. Remote sensing leads should be hielded on long runs to prevent pickup into the amplifier circuitry of e supply.

ERIES
hree (3) additional terminals are provided in the base of the supply for onnection to the remotely located load. Voltage drops in the load lines hould not be allowed to exceed 0.5 VDC. Remote sensing leads should e shielded on long runs to prevent pickup into the amplifier circuitry of e supply.

SERIES
hree (3) extra terminals are provided above the connection for connection the remotely located load. Voltage drops in the load lines should not be llowed to exceed 0.5 VDC. Remote sensing leads should be shielded on ng runs to prevent pick-up into the amplifier circuitry of the supply.

TE PROGRAMMING, Suffix "P" — Added Cost $5.00 (D Series ly; Standard on H Series)
wo (2) extra terminals are provided in the base of the supply for conection of the remotely located trimpot. The standard internal trimpot will e shipped as a separate item with the supply. Use shielded leads on long ns to prevent pick-up into the amplifier circuitry of the supply. Proamming resistance is as follows:

Output Voltage Model Group	Programming Resistance, ohms/volt "A" Models	Std. Models
0.9 to 10.8	180 to 200	—
12.0 to 57.2	180 to 200	84 to 102
63.0 to 240	300 to 333	260 to 340

Suffix "P" to the model number when ordering

TE PROGRAMMING, MASTER OUTPUT ONLY,
eries Only, Suffix "P" Added Cost $5.00
e (1) extra terminal is provided in the base of the supply for connection the remotely located trimpot. The standard internal potentiometer will be ipped as a separate item with the supply. Programming resistance is 84 102 ohms/volt. Use shielded leads on long runs to prevent pickup into e amplifier circuitry of the supply. Add suffix "P" to the model number.

T-IN OVERVOLTAGE PROTECTION, Suffix "D" (H Series and J of D Series). Added Cost $30.00 or 15% whichever is greater.
is feature will drive the output voltage towards zero by electronically orting the output, if the output increases above the preset level of 125% 135% of the nominal output voltage. Protection level can be set to other lues within a setting accuracy of +5%. The supply must be turned "off" d then "on" to restore the output after the protection circuit has opated. This feature is available on the J Size "A" Model, and all H Series odules only. Minimum voltage set point 5.5 vdc.

AC INPUT — Suffix "N". H Series Only
d $5.00 when ordered in A and B case sizes. No additional charge when dered in C, D and E case sizes.

INPUT RANGE — Suffix "W" Added Cost $10.00 or 8% whichr is greater.
is feature will allow an expanded input voltage range of 95 vac to 132 c at 57-63 Hz. Derate output current by 25% on all models.

SERIES CONNECTION, Suffix "B"
Added Cost $5.00 or 3%, whichever is greater (D and H Series only).
The supplies will operate into either conventional or complex loads with series connection. When connecting units in series to achieve higher voltage levels, the power supplies must have equal current ratings. In addition, if the power supplies are to operate greater than 500 vdc above ground, then contact Dynage before proceeding to be advised of the proper procedure and precautions to be used.

FUNGUS PROOFING, Suffix "V"
Added Cost $10.00 or 3% whichever is greater
MIL-V-173 varnish is used for fungi nutrient components.

IMPROVED RESOLUTION OF ADJUSTMENT, Suffix "R"
Added Cost $10.00 or 5% whichever is greater
Improved resolution of output voltage adjustment can be obtained on the "A" models only by adding suffix "R" to the model number. The resolution and adjust span are listed opposite the range of nominal output voltages of the supplies. Specify the nominal output required when ordering. Available on "A" models only.

D & H SERIES

Output Voltage Model Group	Adjust Span, mv	Resolution (whichever is greater)
0.9 to 4.1 vdc	± 50	1 mv
4.5 to 6.7 vdc	± 75	1 mv
7.3 to 10.8 vdc	± 100	0.01% or 1 mv
12.0 to 19.6	± 200	10 mv
21.6 to 38.8	± 400	0.05% or 16 mv
42.8 to 92.6	± 1000	31 mv
102 to 199	± 2000	39 mv
218 to 240	± 4000	67 mv

K & KH SERIES

±10	±250	12 MV
±12	±250	12 MV
±15	±250	12 MV

IMPROVED TRACKING, "K" Series only Added Cost $20.00
Tracking of the −15 vdc output to the +15 VDC output within ±0.005%/°C. To order add a suffix "K" to the model number.

LOWER TEMPERATURE COEFFICIENT,
"K" Series only Added Cost $10.00
Temperature coefficient of ±0.015%/°C over the range of −20°C to +60°C. To order add a suffix "T" to the model number.

LOWER TEMPERATURE COEFFICIENT
D SERIES ONLY

Suffix	Temperature Coefficient (whichever is greater)	Range, °C	Added Cost
"T"	±0.005%/°C or ±0.6 mv/°C	−20 to 60	$20.00 or 10%
*"TT"	±0.002%/°C or ±0.24 mv/°C	0 to 50	25.00 or 15%
*"TTT"	±0.001%/°C or ±0.12 mv/°C	0 to 50	50.00 or 50%

*Suffixes "TT" and "TTT" are only available in conjunction with the following other optional features. Suffix "F" or "FF" or "R" or "P".

LONG TERM STABILITY
D SERIES ONLY

Suffix	Long Term Stability (whichever is greater)	Short Term Stability (whichever is greater)	Added Cost
*"H"	±0.05% or ±6 mv/month	±0.01% is ±1.2 mv/8 hrs.	$30.00 or 20%
*"HH"	±0.02% or ±2.4 mv/month	±0.004% or ±0.5 mv/8 hrs.	50.00 or 50%
**"HHH"	±0.005% or ±0.6 mv/month	±0.001% or ±0.12 mv/8 hrs.	90.00 or 100%

*Suffixes "H" and "HH" are only available in conjunction with Suffix "TT" (and other required Suffixes).
**Suffix "HHH" is only available in conjunction with Suffix "TTT" (and other required Suffixes).

Ordering Information

Terms

Terms are net 30 days, F.O.B. Bloomfield, Conn. Prices and specifications subject to change without notice. Blanket purchase agreements with releases over one (1) year are easily arranged.

Warranty

Dynage, Inc., warrants each product manufactured by them to be free from defects in material and workmanship. Our liability under this warranty is limited to servicing, adjusting or replacing any product returned to the factory for that purpose within two (2) years after date of shipment. We assume no liability for consequential damages of any kind, and the purchaser, by acceptance of each product will assume all liability for the consequence of its use or misuse by the purchaser, his employees, or others.

rder

ify power supply by model number along with suffixes for any optional eures required. As an example, to order Model D-14.6 — 0.200A with oved 0.01% regulation (Suffix "AAA"), with fixed output, (Suffix "F"), with 0.002% temperature coefficient (Suffix "TT"); the complete model ber would be D-14.6 - 0.200AAAFTT.

nty-two (72) hour delivery can be made on quantities of 2 pieces or e of each model ordered, except those with optional features.
ne drawings and parts lists only furnished when requested.

mixed models and optional feature discounts, consult local rep or age directly.

DYNAGE, INC., Bloomfield, Connecticut 06002/203-243-0315/TWX 710-425-6063

DC Voltage Reference Standards—The Ultimate Solution to DC Voltage Reference Requirements

* Output Isolation: 0.5 μa (rms) ac leakage current through one (1) megohm resistor connected from either output to ground.
† Voltage Regulation: For a ±10% input change.

210, 230 Series DC Input

201 Series DC Input

202, 220, 240 Series AC Input

FEATURING

- Reference voltages of 6.2, 12.4, 18.6 vdc
- ±50 ppm or better, long term stability (See optional featu
- Voltage Regulation (short term) against line changes ±5 for ±10% input changes (except 201 & 202 series)
- Models available for either AC or DC inputs
- Temperature coefficient to 1 ppm/°C (See optional featu

OPTIONAL FEATURES

Improved Temperature Coefficient, Suffixes "T", "TT" & "TT

Suffix	Temperature Coefficient	(A and C models only) Range, °C	Added Cost
T	±0.0003%/°C	10 to 50	+30%
TT	±0.0002%/°C	10 to 50	+60%
TTT	±0.0001%/°C	20 to 30	+60%

Improved Long Term Stability, Suffixes "S", "SS" & "SSS"

Suffix	Long term stability	Added Cost
None	±50ppm/1 year	None
S	±30ppm/1000 hrs.	+10%
SS	±20ppm/1000 hrs.	+30%
SSS	±10ppm/1000 hrs.	+60%

Common Negative Terminals, Suffix CN

The 210 and 230 Series can be furnished with common ga- tive input and output terminals. **Added Cost $3.00.**

OUTLINES

CONSTRUCTION

Series 201, 210 and 230 are encapsulated in cups with si one rubber. Series 202, 220 and 240 are potted in silicone ber in MIL-T-27 transformer cases.

eem

54 PRODUCT SECTIONS IN 3 VOLUMES

eem—Electronic Engineers Master saves you engineering, specifying and purchasing time. Manufacturers' catalogs are grouped under easy-to-remember headings.

The 54 Product Sections categorize related electronic components, equipment, materials, instruments and systems, and fabrication services, enabling you to quickly compare and evaluate similar items.

To pinpoint or locate specific products within any catalog page, always refer to the Product Index (Green Pages).

Vol. 1 TEST INSTRUMENTS EQUIPMENT & SYSTEMS

2 ACTIVE COMPONENTS/CIRCUIT ASSEMBLIES/CONTROLS & DRIVES

Vol. 3 PASSIVE COMPONENTS MATERIALS/HARDWARE

These are the 54 eem Product Sections grouped in 3 volumes

Product Section	Volume Number	Products
1100	2	Amplifiers, Audio, Operational, etc.
1200	1	Antennas & Accessories
1300	1	Audio Equipment & Accessories
1400	3	Cabinets, Chassis, Containers, Racks, Boxes, etc.
1500	3	Capacitors (All Types)
1600	3	Chemicals (Acids, Adhesives, Coatings, Lubricants, etc.)
1700	2	Circuit Assemblies, Circuit Boards & Breadboarding Kits
1800	3	Coils (Inductors, Chokes), Assemblies, Forms
1900	1	Communications Equipment (Facsimile, Telephone, Television)
2000	1	Computing, Data Handling Equipment & Accessories
2100	3	Connectors, Electrical (Receptacles, Sockets, Terminal Boards)
2200	2	Controls, Control Components & Systems
2300	2	Crystals, Tuning Forks & Resonant Reed Devices
2350	3	Delay Lines (All Types)
2400	2	Panel Components (Incl. Lighting & Readouts)
2500	3	Fabricated Mechanical Parts (Bearings, Cores, Magnets, etc.)
2550	1	Environmental Test Equipment
2600	3	Fans, Blowers & Cooling Equipment
2700	2	Filters
2800	3	Hardware, Non-Current Carrying (Fasteners, Washers, etc.)
2900	1	Instruments, Measuring & Test
3000	1	Instruments, Graphic Recording
3100	3	Insulators, Insulating Materials & Parts
3130	2	Integrated Circuits & Hybrid Microcircuits
3150	3	Manufacturing, Subcontracting, Custom Fabrication
3200	3	Materials, Raw (Metals, Plastics, Glass, Rubber, Cloth, etc.)
3300	1	Medical Electronic Equipment
3400	1	Microwave, Radar Equipment, Components & Accessories
3500	2	Motors, Rotating Components & Accessories
3600	1	Nuclear & Radiation Equipment
3700	2	Photoelectric Equipment & Components
3800	2	Optical Equipment & Accessories
4000	1	Power Supplies, Converters, Inverters, Batteries, etc.
4100	1	Production Machinery & Automation Equipment
4200	3	Engineering Aids (Books, Drafting Equipment, Whiteprinters)
4300	1	Recording Equipment (Non-Audio Types)
4500	2	Relays
4600	3	Research, Development, Engineering Services
4700	3	Resistors, Fixed
4750	3	Resistors, Variable (Potentiometers & Rheostats)
4800	2	Semiconductors & Devices, Rectifiers (Non-Tube Types)
4900	2	Servomechanisms & Components
5000	1	Studio Equipment
5100	2	Switches, Circuit Breakers, Fuses, Protective Devices
5200	1	Telemetering Equipment
5300	2	Thermal Devices, Thermistors, Thermocouples, Thermostats, etc.
5400	3	Tools (Hand & Power); Soldering Supplies
5500	2	Transducers & Associated Equipment
5600	3	Transformers
5700	2	Tubes, Tube Parts, Shields, Inserts, etc.
5800	1	Ultrasonic, Sonic, Subsonic Equipment
5850	1	Vacuum Equipment & Accessories
5900	2	Vibrators, Choppers, etc.
6000	3	Wire, Cable, Harnesses & Accessories

CML solid state frequency converters

- 50 to 2000 VA — Single Phase Output
- 0.5% Frequency Regulation
- 1% Voltage Regulation
- Harmonic Distortion less than 1% at 400 Hz, less than 3% at 60 Hz
- High Efficiency Switched Mode Operation

NEW FOR 1970

high powered 3 phase frequency converters / TG series
1.0 KVA to 30 KVA output • 60 & 400 Hz mode

- Rugged construction for marine & ground support applications
- High efficiency
- Fixed & adjustable output frequencies
- Compact, lightweight designs
- Low distortion sinewave output
- Complete overload & short circuit protection

Write or Call Collect for Complete Specifications

Specifications:

INPUT SERVICE: 115V ±5%, 1ø, 47-65 Hz.

OUTPUT CONFIGURATION: Single phase, 2 wire floating.

OUTPUT VOLTAGE: Adjustable 0-125 volts rms by front pan control; full power available at 110-125 volts.

DUTY CYCLE: Continuous duty at rated output.

EXTERNAL SIGNAL: 5 volts rms required for rated output. Signal input impedance 600 ohms single ended.

METERS: Output voltmeter is furnished as standard equip model NS350. Voltmeter is available as accessory for mod NS120 & NS175; specify suffix (—V).

TERMINATIONS: Output terminals are furnished both front five way binding posts on front and barrier strip on rear. power termination is rear mounted barrier strip. Signal in via jack mounted on front panel.

CONSTRUCTION: Standard 19" rack mount construction wi dust covers. Bench adapters available as accessory; spec suffix (—C).

****AUDIO AMPLIFIER ONLY:** Each model is also available a audio power amplifier only (without a built-in oscillator) w full power range of 45-6000 Hz. All standard models (wit without oscillator) include an input signal jack for use w external signal source. Specify the Basic Power Supply M and Suffix # (—JA) if oscillator is not required.

pcifications:

UT **T CONFIGURATION:** Single Phase, 2 wire floating.

UT **T VOLTAGE:** Adjustable 0-125 Volts; full power available at utp of 110-125 Volts.

UT **CYCLE:** Continuous duty at full rated output.

RO **CTIVE CIRCUITS:** All models are equipped with instantaneous verad protection and front panel reset.

ET **S:** All standard models are furnished with front panel meters o nnitor output voltage and plate currents of final amplifier tubes.

XT **NAL SIGNAL:** Signal input voltage of 5 volts rms required for ull ted output. Signal input impedance 600 ohms, single ended.

UT **T & INPUT TERMINATIONS:** Units rated at 500VA to 2000VA include output terminals on front and rear, five way binding posts on front and barrier strip on rear; input power termination is rear mounted barrier strip.

Models N5000A and N15000A have input and output terminals accessible via knockouts at cabinet rear.

CONSTRUCTION: Models rated 500VA to 2,000VA are standard 19" rack mount units with full dust covers. Bench adapters available as accessory for these models; specify suffix (—C). Side support is recommended for rack mount models. Slides available as optional accessories; specify suffix (—S). 5 KVA and 15 KVA models are furnished complete in cabinet enclosure. 5 KVA model includes casters.

NEW FOR 1970

solid state AC power supplies
ST series

- 3 models rated at 600, 1250 & 2500 VA Single Phase Output
- All models can be stacked for 2 Phase or 3 Phase Operation
- 45 to 10,000 Hz Frequency Range
- Interchangeable Plug-in Oscillators with Fixed or Adjustable Frequencies. Frequency Stabilities to 0.001%
- Selectable Output Voltage Taps
- Minimum Package Sizes
- Complete Short Circuit and Thermal Protection

CML three phase AC power supplies

- **Minimum Package Sizes** . . . 2500 VA in 14" rack height.
- **Interchangeable Plug-in Oscillators** . . . 23 standard oscillators are available—to provide fixed or adjustable output frequencies between 45 and 6,000 Hz and stabilities to ±0.001%.
- **Instantaneous Overload Protection** . . . An overload of any one phase causes complete output shutdown, protecting 3 phase load.
- **Dual Output Voltage for △ or Y Loads** . . . Adjustable voltages 0-125 volts line-to-line as well as 0-217 volts line-to-line are presented at output terminals; output is isolated for maximum versatility.
- **Constant Voltage Output** . . . 0.5% regulation for no load to full load change.
- **Response time less than 50 microseconds.**
- **Output Voltage** unaffected by unbalanced loa

model T2500A with SG-36B oscillator

Specifications

OUTPUT CONFIGURATION: Three Phase, 4 wire wye, neutral floating.

OUTPUT VOLTAGE: 0-125 Volts line-to-line and 0-217 Volts line-to-line; both sets of terminals are presented at output. Full power available at output of 110-125 volts and 190-217 volts. Master gain control and phase 2 and 3 trim controls provided on front panel.

OUTPUT POWER: Rated output power for each model is shown in chart above. Maximum power per phase is ⅓ of 3ø output.

LOAD POWER FACTOR: 0.7 lead or lag to unity at rated output; wider power factor range with slight derating.

FREQUENCY RANGE: Each amplifier model is rated at full power 45-6,000 Hz except for the models T15000A and T20000A which have a 300-500 Hz full power range. The operating output frequency range is determined by the particular plug-in oscillator which is used.

HARMONIC DISTORTION: Less than 3% over the entire 45-6,000 Hz amplifier range; less than 1%, 300-1000 Hz.

HUM AND NOISE: 60 db below maximum output voltage.

OUTPUT PHASE SEPARATION: 120 ±1° for fixed frequency m[illegible] well as 350-450 Hz models. 120 ±2° for 45-70 and 300-2,00[illegible] models. 120 ±3° for 45-6,000 Hz models.

CONSTRUCTION: Models rated 150VA to 2500VA are standard rack mount units with full dust covers. Bench adapters availa[illegible] accessories for these models; specify suffix (—C). Side suppo[illegible] recommended for rack mount models. Slides are available as optional accessories; specify suffix (—S). 5KVA-20KVA models furnished complete in cabinet enclosure. 5KVA model includes

Single Phase & Two Phase Output

Standard 3 phase amplifiers may be used to provide a 2 [illegible] output at ⅔ of rated output power. Special plug-in oscil[illegible] are available with selectable 90° or 120° phase separatio[illegible] 2 phase or 3 phase operation respectively.
Standard 3 phase amplifiers may be used to provide a [illegible] phase output at 57% of rated output power over an adju[illegible] voltage range of 110-125 volts.

54 PRODUCT SECTIONS IN 3 VOLUMES

eem—Electronic Engineers Master saves you engineering, specifying and purchasing time. Manufacturers' catalogs are grouped under easy-to-remember headings.

The 54 Product Sections categorize related electronic components, equipment, materials, instruments and systems, and fabrication services, enabling you to quickly compare and evaluate similar items.

To pinpoint or locate specific products within any catalog page, always refer to the Product Index (Green Pages).

Vol. 1 TEST INSTRUMENTS EQUIPMENT & SYSTEMS

2 ACTIVE COMPONENTS/CIRCUIT ASSEMBLIES/CONTROLS & DRIVES

Vol. 3 PASSIVE COMPONENTS MATERIALS/HARDWARE

These are the 54 eem Product Sections grouped in 3 volumes

Product Section	Volume Number	Products
1100	2	Amplifiers, Audio, Operational, etc.

E-TRONICS
HOUSING KITS

48 hr. DELIVERY ON LIMITED QUANTITIES ON ALL MODE

End plates require 4 holes to prop hold assembly together. Specif holes and counter-sink if f surface is desired.

Complete aluminum extrusion housing kits for electronic packaging with provis for integral heat dissipation. Many variations are available. (See page 1037 extrusion configurations.) All aluminum is 6063-T5.

SELECT YOUR OWN PACKAGE

	EXTRUSIONS Drilled and Tapped for End Plates					Slide Covers Any Length	END PLATES with Mounting Holes

ALUMINUM EXTRUSIONS

WITH INTEGRAL HEAT SINK & PC CARD PACKAGING

48 hr. DELIVERY ON LIMITED QUANTITIES ON ALL MODELS

TYPICAL E-TRONICS ALUMINUM EXTRUSIONS

Now you can purchase an off-the-shelf family of extrusions to quickly and economically package your electronic black boxes with built-in heat dissipation capability. E-TRONICS Extrusions offer many variations of package size and ease of internal packaging. All extrusions are available in lengths of 6 feet and may be cut to any desired lengths. All aluminum is 6063-TS.

Transpac® Power Supplies

MIL SPEC SILICON, REPAIRABLE POWER MODULES

Fully Meets MIL-E-4158, MIL-E-5400, MIL-E-16400, MIL-E-5272, MIL-T-21200

75°C FREE AIR RATING

0 through 310 VDC, 50 MA through 8 Amps

Transpac **CERTIFIED*** *Militarized Line*

Input: 103.5-126.5 VAC (standard) or 108-132 VAC (specify) 50-440 cps
Ripple: Less than 800 μv RMS except 50 through 310 VDC where ripple is less than 0.005% RMS
Line Regulation: Less than ±0.01% or 5 mv, whichever is greater, for full input change
Load Regulation: Less than 0.05% or 8 mv for 0-100% load change
Transient Response: Less than 50 μsec for step line or load change
Maximum Case Temperature: 115°C
Free Air Operating Temperature: −55°C to +75°C (full tantalum type up to 1 ampere most models) −40°C to +75°C (semi-tantalum type above 1 ampere) full ratings, no external heat sinking
Temperature Coefficient: Less than 0.01% per degree C or 3 mv
Long Term Stability: Within 5 mv for 8 hours after 20 minute warm-up (line, load, temperature constant)
Interconnection: Series or parallel operatio
Voltage Adjustment: External screwdriver v control
Remote Voltage Control: Provision for e control of output voltage
Remote Sensing: Remote sensing facilitie provided
Short Circuit Protection: Automatic short protection and automatic recovery
Output Connection: Ungrounded outputs, positive or negative terminals may be grounded
Transistor Types: MIL-STD-701 and MIL-S
Military Specs: MIL-E-4158, MIL-E-5400, MIL-E-16400, MIL-E-5272, MIL-T-21200 applicable

*Certificate of Conformity by independent labora supplied on request.

OUTPUT VOLTAGE (DC)	CURRENT	SIZE W x D x H (INCHES)	MODEL	PRICE

ERA Transpac® Corporation

67 Sand Park Road, Cedar Grove, N.J. 07009 • (201) 239-3000 TWX 710-994-5789

A Wholly Owned Subsidiary of Electronic Research Associates, Inc.

Transpac® 5 or 3.6 Volt IC Logic Power Modules

for cool performance, total protection

SPECIFICATIONS

Dual Input: 105-125 VAC and 210-250 VAC, 47-440 Hz
Line Regulation: 0.05% + 4 millivolts
Load Regulation: 0.03% + 3 millivolts, 0-100% load change
Ripple: < 800 microvolts RMS
Temperature Coefficient: Less than .03% per 0°C
Operating Temperature: —25°C to +71°C, free air
Storage Temperature: —62°C to +85°C
Voltage Adjustment: ±5%, local or remote
Current Limiting: Adjustable
Overvoltage Protection: Adjustable
Recovery Time: Less than 50 microseconds
Remote Sensing: Standard
Interconnection: Series or parallel operation
Finish: Black anodized, per Mil-A-8625

ATURES

- Compact size
- Low cost
- Off-the-shelf delivery
- Series and parallel operation
- Factory burn-in
- IC Op-Amp utilized for high performance
- Adjustable overvoltage protection
- Adjustable current limiting
- Reverse polarity protection
- Overload and short circuit protection with automatic recovery
- Boost tap for input correction
- Indicator pilot light
- Thermal protection with automatic recovery
- Electrostatically shielded power transformer
- Fully repairable
- All silicon design — fast warm up and stabilization
- No forced air or additional heat-sinks required
- Isolated input and output
- Dual AC voltage input
- Remote sensing
- Wide frequency range without derating
- Flush threaded inserts on more than one surface for mounting versatility

CP-5-25	5	32.0	28.5	25.0	4 15/16 x 7½ x 14⅞	18EE	$310.00

Other voltages and currents available in above listed cases.

The Transpac CP Series incorporates latest circuit techniques and features a unique heat sinking method which permits full ratings at 71°C ambient with convection cooling. Design characteristics meet military specifications such as Mil-QQ-318, Mil-P-18177B, and Mil-A-8625.

Input to the IC Power Source is 105-125 VAC and 210-250 VAC, 47-440 Hz. An AC input boost tab is also available for crest factor correction or low line voltage conditions. Standard models are available with 3.6 or 5 VDC output.

These units incorporate short circuit protection with automatic recovery. Protective features also include adjustable current limiting thermal cutout with automatic recovery and adjustable overvoltage crowbar. The units are designed for long reliability, and incorporate a maximum-area heat sink design to lower internal temperatures for longest component life.

Each unit is subjected to burn-in under full load to qualify the CP Series for the demanding requirements of latest generation computer dependability and space age environmental requirements.

NON-REGULATED SILICON HIGH CURRENT POWER SUPPLIES

Non-regulated silicon rectifier designs with all components fully accessible. All units in one-half relay rack dimensions. Two units may be mounted side-by-side for 19" relay rack mounting. Front panel switch and pilot light; rear terminals. Ripple less than 1 volt, 5 models, 28 VDC, 5 to 40 amp ratings. Prices $110 to $273.

ERA DELIVERS SPECIAL DESIGN POWER SUPPLIES by the thousands

In addition to hundreds of off-the-shelf power sources, ERA provides a complete custom design service. ERA's custom department, fully-staffed with top power-engineering experts can supply you with "instant" quotations, prompt prototype delivery, and quality production at competitive prices. Write ERA now for a quotation on your special designs.

71°C FREE AIR RATING

WIDE RANGE LOW COST DC POWER MODU

4 through 60 VDC, 1 Amp through 12.5 Amps

Input: 105-125 VAC, 50-400 cps
DC Output: 4-32 VDC or 30-60 VDC (see table)
Regulator Type: Solid-state, all silicon semi-conductors
Ripple: Less than 800 microvolts RMS or .005%, whichever is greater
Line Regulation: Better than ±0.01% or 5 mv for full input change
Load Regulation: Better than 0.05% or 8 mv for 0-100% load change
Transient Response: Less than 50 microseconds
Operating Temperature: —20°C to + free air, full ratings
Temperature Coefficient: Less than per degrees C or 3 millivolts
Long-Term Stability: Within 8 milliv (8 hours reference)

Features of all ERA Wide Range Modules

- Wide range output voltage flexibility
- Low and high current models
- Single model serves all voltage requirements
- All silicon
- No heat sinking or air blow required
- Compact, fully repairable
- Automatic over-current protection
- Excellent long-term stability
- Minimal temperature coefficient
- Wide input range
- Remote sensing
- Series or parallel operation
- Ungrounded outputs
- Short circuit and transient protected
- Optional accessories

Silicon/Hybrid Wide Range High-Voltage Su

0-5,000 VDC @ 0-15 MA

MODEL HVA 515 $495.00

Features

- New Hybrid Solid-State/Vacuum Tube Designs
- All Silicon Semi-conductors
- High Stability, High Temperature Performance
- Closely Regulated
- Low Ripple Content
- Wide Range Adjustable Output
- Fast Transient Response
- Accurate Calibration and Resolution
- Overload, Short Circuit, Transient Protected
- Compact Space-Saving Designs
- Precision Engineered
- Moderately Priced
- Reverse Polarity Switch

GENERAL SPECIFICATIONS

Input: 105-125 VAC, 50-400 cps
Output: 0-5 KV DC at 0-15 ma
Line and Load Regulation: 0.01% or 50 mv, whichever is greater
Ripple (RMS): 0.0001% or 5 mv whichever is greater
Temperature Coefficient: 0.01% / °C or 10 mv/ °C, whichever is greater
Long Term Stability: Less than 25 mv, constant line, load and temperature (8 hours)
Transient Response: Less than 50 microseconds
Operating Temperature: 0°C to 50°C
Output Polarity: Either positive or negative grounding
Metering: Voltage and current m ers
Cooling: Convection
Physical: Bench or relay rack m ntin
Panel Size: 3½ x 19 x 15⅛

APPLICATIONS

- Cathode Ray indicators
- Klystron, Traveling Wave Tub
- Microwave and Laser Equipm t
- Geiger, Scintillation Counter
- Dielectric Testing
- Electron Accelerators
- Corona, Plasma Discharges
- Electro-Static Deposition
- All HV Laboratory and Equip nt Applications

RATING

Model SL36-4M Shown

- Silicon Design
- Continuously Adjustable 0 to 36 VDC
- Operating Temperature to +65°C
- Automatic Short Circuit Protection
- Remote Sensing
- Convection Cooled
- Relay Rack or Bench Mounting

Input: 105-125 VAC, 50-400 cps
Regulation Line: ±0.01% or 5 mv
Regulation Load: 0.05% or 8 mv
Long Term Stability: Less than 8 mv, constant line, load and temperature
Ripple: Less than 1 mv, RMS
Transient Response: Less than 50 μsec
Operating Temperature: —20°C to +65°C
Temperature Coefficient: 0.01%/°C or 3 mv
Short Circuit Protection with automatic recovery
Remote Sensing
Parallel and Series Operation
Vernier Voltage Control
Output Terminals (Ungrounded)
Reverse Voltage Protection
Cooling: Convection
Metering: Separate Current and Voltage Meters

Model	Voltage	Current	Size* HxWxD	Price
SL36-2M	0-36 VDC	0-2 amps	3-1/2 x 7-1/2 x 15-7/8	$247.00

SOLID STATE AC REGULATOR Sinusoidal Output, Modular Design

Model	Rating	Weight	Price
RT 250	250 VA	14 lbs.	$136.
RT 500	500 VA	27 lbs.	$184.
RT 1000	1000 VA	43 lbs.	$247.

Model RT 250

FEATURES

- Sinusoidal output
- Precision RMS regulation
- Compact, modular design
- Minimum magnetic field or RFI
- Wide input range 47-440 cps
- Wide load power factor range
- Remote sensing
- Overload and short-circuit protected
- 71°C Free air rating
- Fully repairable

Input: 105-130 VAC, 47-440 cps.
Line Regulation (RMS): Within ± 0.1% for full input change, resistive load or within ± 0.2% for +0.7 to —0.7 PF load.
Load Regulation (RMS): Within 0.2% for full load change, resistive, or within 0.5% for +0.7 to —0.7 load PF change.
Wave Form Distortion: Less than 5% (115 VAC input, unity through 0.7 load PF.)
Efficiency: Better than 75% rated load, 115 VAC input.
Load Power Factors Range: +0.7 PF through —0.7 PF.
Response Time: Less than 16 millisec.
Operating Temperature: —20°C to 71°C free air, full ratings.
Heat Sinking: Internal, convection cooled.

TRANSPAC® SOLID-STATE DC to AC INVERTERS

REGULATED (Square Wave) IT-B TYPES

- Output voltage and frequency vary proportionately with input voltage change
- Voltage regulation is within approximately 6% and frequency regulation within approximately ±2% for 50-100% load change
- Unit can be synchronized externally

	POWER OUTPUT	INPUT VDC	OUTPUT (NOM.)	SIZE W x D x H (INCHES)	MODEL	PRICE

REGULATED (Square Wave) SB TYPES

- Output voltage varies proportionately with input voltage change
- Output voltage regulation within approximately 5% for a 50-100% load change
- Frequency regulation within approximately ±1% for ±10% input change or 0-100% load change
- Unit can be synchronized externally

60 CPS OUTPUT	50 VA	20-29	115 VAC	5-1/2 x 6-1/16 x 6-5/32	IT256SB	$205.00
	100 VA	20-29	115 VAC	5-1/2 x 6-1/16 x 6-5/32	IT2106SB	$257.00
	250 VA	10-14	115 VAC	6-1/8 x 5-15/16 x 6-1/2	IT2256SB(12)	$268.00
	250 VA	19-29	115 VAC	6-1/8 x 5-15/16 x 6-1/2	IT2256SB(24)	$278.00
	500 VA	10-14	115 VAC	7-13/32 x 9 x 6-3/16	IT2506SB(12)	$294.00
	500 VA	19-29	115 VAC	7-13/32 x 9 x 6-3/16	IT2506SB(24)	$304.00
400 CPS OUTPUT	50 VA	20-29	115 VAC	6-1/8 x 5-15/16 x 6-1/2	IT254SB	$215.00
	100 VA	20-29	115 VAC	6-1/8 x 5-15/16 x 6-1/2	IT2104SB	$241.00
	250 VA	20-29	115 VAC	6-1/8 x 5-15/16 x 6-1/2	IT2254SB	$283.00
	500 VA	20-29	115 VAC	7-13/32 x 9 x 6-3/16	IT2504SB	$352.00

REGULATED (Sine Wave) RS TYPES

- Load voltage variation with 0-100% change is less than 6%
- Frequency regulation within ±1% for either 10% input change or 0-100% load change
- Magnetic regulator provides voltage regulation
- Unit can be synchronized externally

60 CPS OUTPUT	50 VA	26-29	115 VAC	6-1/8 x 5-15/16 x 6-1/2	IT256RS	$247.00
	100 VA	26-29	115 VAC	7-13/32 x 9 x 6-3/16	IT2106RS	$275.00
	250 VA	26-29	115 VAC	12 x 9 x 8	IT2256RS	$360.00
	500 VA	26-29	115 VAC	11 x 14 x 7	IT 2506RS	$505.00
400 CPS OUTPUT	50 VA	26-29	115 VAC	6-1/8 x 5-15/16 x 6-1/2	IT254RS	$252.00
	100 VA	26-29	115 VAC	7-13/32 x 9 x 6-3/16	IT2104RS	$289.00
	250 VA	26-29	115 VAC	12 x 9 x 8	IT2254RS	$383.00
	500 VA	26-29	115 VAC	11 x 14 x 7	IT 2504RS	$520.00

ERA Transpac® Corporation

67 Sand Park Road, Cedar Grove, N.J. 07009 • (201) 239-3000 TWX 710-994-5789

A Wholly Owned Subsidiary of Electronic Research Associates, Inc.

Power Supplies - High Wattage

Electrical Features

- 0.1% regulation constant voltage or constant current mode
- 10 MV RMS ripple maximum either voltage or current
- Remote sensing/programming
- Efficiency up to 85%
- Automatic E/I crossover
- Thermal overload protection

Mechanical Features

- Forced air cooling
- Plug-in circuit boards

SCR SERIES

The SCR Series are high current power supplies designed for a wide variety of applications, particularly where operation in both the constant current mode and in the constant voltage mode is required. Use of active components in the filter section reduces ripple in either mode by factors as high as 100 to 1 over competitive designs. The unique filter design coupled with efficient cooling results in the smallest package size per watt possible.

Power Supplies For Lab/Systems

RE Series

The RE Series is designed for both precise laboratory and systems use and features automatic cross-over to either constant voltage or constant current modes of operation.

Features

- .01% regulation
- Remote sensing/programming
- Automatic E/I crossover
- 0.5 MV RMS ripple
- 1000 Ohms/volt programming constant

Ratings

Model #	Output E	Output I	Size	Price
RE 40-5 ML	0-40	5	1	$320.00
RE 40-10 ML	0-40	10	2	400.00
RE 60-2.5 ML	0-60	2.5	1	320.00
RE 60-5 ML	0-60	5	2	445.00

NOTES: All units input: 105-125 VAC 50-63Hz.
Size 1 — 3½H x 19W x 17¼D.
Size 2 — 5¼H x 19W x 16¼D.
For 220V 50Hz input add suffix 0011 to Model and 15% to price.

HV Series

The HV Series is a completely solid state medium voltage power supply.

Features

- .02% regulation
- 1MV RMS ripple
- Automatic E/I crossover
- Remote sensing/programming

Ratings

Model #	E	I	Size	Price
HV 150-2M	0-150	2	3½H x 19W x 15¾D	$735.00
HV 330-1M	0-330	1	3½H x 19W x 15¾D	735.00

All units 105-125V AC 50-63Hz
For 220V 50Hz input add suffix 0011 to Model and 15% to price.

C 600 Series

The C 600 Series is designed for applications where precise constant current operation down to currents as low as 0.5 microamps is required.

Ratings

Model #	Output Compliance Full I	Output Compliance Derated I	Output Current	Regulation Line	Regulation Load	Ripple 0.4% of setting + Neg.	Ripple 0.4% of setting + Pos.	Size	Price

ELGAR
AC Power Sources

Elgar AC power sources are designed for continuous-duty operation and utilize all-silicon solid-state circuitry as well as the highest-grade components. The basic power amplifier consists of two DC supplies and a multiple-stage amplifier with an adjustable power output transformer.

Control circuitry is mounted on a circuit board with test points, and all adjustment controls are available from the top of the unit.

Standard output voltages of 28 V, 115 V, or 230 V are available at the rear-panel terminal strip and at the front-panel connectors.

The instruments are contained in rack-mount enclosures with a meter for output voltage monitoring, a power-ON indicator, an output voltage amplitude control, and a power switch circuit breaker located on the front panel.

The output frequency is established by a plug-in oscillator. A variety of interchangeable plug-in oscillators is available; 45 Hz to 10 KHz variable, narrow range variable, and fixed frequencies with accuracies to 0.0001%.

Power Source Selection Guide

Single-Phase Power Amplifiers

Model	Output Power
201	200 VA
501	500 VA
751	750 VA
1001	1,000 VA
1000-1	1,000 VA (2 pieces Model 501 in tandem)

C-9000-3	9,000 VA (9000-3 in cabinet)

ELGAR Model 201 Single Phase 200 VA Solid-State Power Source

Output Power: 0-200 VA, 1ϕ, (1 0-400 VA, 2ϕ, (2 units); 0-400 (2 units)*; 0-600 VA, 3ϕ, (3 units tinuous duty.

Power Factor: Full current rating lagging to 0.7 leading power facto

Output Voltage: Adjustable 0-3 0-130 VAC, or 0-260 VAC.** Full power range 27-32 VAC, 110-13 or 220-260 VAC.

Output Configuration: 2-wire from ground; either output grounded.

Output Frequency Range: 45 Hz t Hz at full power output; 5 KHz to at one-half power output.

Wave Shape: Sine wave.

Distortion: Less than 0.9% over 4 5000 Hz range at full output pow than 0.5% at mid band (100 Hz t Hz) at full output power. Less th 5 KHz to 10 KHz at one-half power.

Load Regulation: ±1% no load load, 45 Hz to 5000 Hz, ad through zero for specific load co ±2% no load to one-half load, 5 10 KHz.

Response Time: Less than 50 μs

Line Regulation: ±0.25% at f vesus ±10 VAC change at 115 put. ±0.25% at full load vers VAC change at 230 VAC input.

Short Circuit Protection: Automa rent limiting protects against or short circuit; amplifier reco mediately when overload or short is removed.

Output Noise: 60 db below full voltage.

Input Power: 115 VAC ±10 VAC VAC ±20 VAC, 47 Hz to 63 Hz phase. (50 Hz to 425 Hz option

Temperature Range: 0°C to 50° tional, −20°C to +85°C non-ope

Weight: Net approx. 60 lbs., ship prox. 65 lbs.

*For 2 amplifier wye only: frequer 45 Hz to 2000 Hz at full pow regulation for balanced load.

**Output voltage range selected b change on rear panel terminal b

ELGAR
Model 1000
Single, Two or Three Phase
1000 VA Solid-State
Power Source

The Elgar Model 1000 AC power source is an all-silicon, solid-state power source designed for maximum flexibility and reliability.

It utilizes two pieces of our industry-proven Model 501 housed in a single rack mount enclosure. These units can be interconnected to provide the following ouput power configurations:
1000 VA, single phase,
1000 VA, 2 phase,
1000 VA, 3 phase, 3 wire delta, or
1000 VA, 3 phase, 4 wire wye.

Either amplifier will accept any of 40 interchangeable single or multiphase plug-in oscillators covering the range of 45 Hz to 5000 Hz, with accuracies from 1% to 0.0001%. Special oscillator modules are available providing ±0.01% amplitude and phase regulation, or amplitude and frequency BCD programming capability.

The Model 1000 is ideally suited for automated and laboratory testing of gyro, aircraft and missile and space equipment, and for operation of 60 Hz power equipment overseas.

Output Power:
Model 1000-1*, 1φ.
Model 1000-2, 2φ (500 VA/phase).
Model 1000-3D, 3φ, 3 wire delta (333 VA/phase).
Model 1000-3Y, 3φ, 4 wire wye, (333 VA/phase) continuous duty.
Power Factor: Full current rating into zero lagging to 0.7 leading for 1000-1 and 1000-2; 0.7 lagging to 0.7 leading for 1000-3D and 1000-3Y.
Output Voltage:
Model 1000-1, 0-130 VAC or 0-260 VAC, 2 wire.
Model 1000-2, 0-32 VAC, 0-130 VAC, or 0-260 VAC, 3 wire.
Model 1000-3D, 0-32 VAC, 0-130 VAC, or 0-260 VAC line to line, 3 wire open delta.
Model 1000-3Y, 0-32 VAC or 0-130 VAC line to neutral (120/208), 4 wire wye.

Output Configuration: All outputs from ground; any one phase o can be grounded. Voltage range lected by strapping changes panel terminal block.
Output Frequency Range: 1 1000-2, 45 Hz to 5000 Hz at f output. 1000-3D & 1000-3Y, 4 2000 Hz at full power output.
Wave Shape: Sine wave.
Distortion: Less than 0.9% full f range at full output power. L 0.5% mid range (100 Hz to 10 full output power.
Load Regulation: ±1% no loa load over rated frequency rang 3Y with balanced load), a through zero for specific load c
Response Time: Less than 50
Line Regulation: ±0.25% at versus ±10 VAC change at input. ±0.25% at full load ver VAC change at 230 VAC input.
Short Circuit Protection: Autom rent limiting protects against or short circuit, amplifier rec mediately when overload or sho removed.
Output Noise: 60 db below fu voltage.
Input Power: 115 VAC ±10 VA VAC ±20 VAC, single phase to 63 Hz. (375 Hz to 425 Hz op
Temperature Range: 0°C to 50 tional, −20°C to +85°C non-op
Weight: Net approx. 210 lbs., approx. 230 lbs., with cabinet 280 lbs.

*Model dash numbers are for i ordering; units are field changeab configuration with appropriate change.

Solid-State
Frequency Changer

INPUT
Voltage: 120/208 V RMS ±10%.
Configuration: 3-phase, 4-wire
Frequency Range: 47 to 450 Hz.
Protection: Over-under voltage, loss of phase, overcurrent.
OUTPUT
Power: 2500 VA.
Configuration: Single-phase.
Overload: 250% of rated load for 5 sec.; 125% for 5 min.
Voltage: 105 to 125 adjustable.
Regulation: Line: 0.5% for ±10% input change. **Load:** 0.5% for no load to full load.
Frequency: 400 Hz to ±2 Hz under all conditions of line, load; (adjustable 380 to 420 minimum
Distortion: 2% maximum.
Power Factor: ±0.7 to unity at rated VA.
Efficiency: Better than 75% at rated load.
Temperature: −20°C to +55°C operating. −40°C to +85°C storage.
Altitude: Operating: 15,000 feet; Storage: 50,000 feet.
RFI: MIL-I-26600, Class III.
Humidity: 95% R.H. without condensation operating.
CONTROLS
1. Voltage adjust.
2. Input circuit breaker.
3. Output voltmeter.
4. Output current meter.
5. Frequency meter (optional).

CONNECTORS
1. Protected rear barrier strip.
2. Front panel (optional).
3. MS on rear (optional).

ELGAR
Model 7500-3
Three-Phase 7.5 KVA
Solid-State
Frequency Changer

INPUT
Voltage: 120/208 V RMS ±10%.
Configuration: 3-phase, 4-wire.
Frequency Range: 47Hz to 450 Hz.
Protection: Over-under voltage, loss of phase, over current.
OUTPUT
Power: 7500 VA.
Configuration: 3-phase, 4-wire.
Overload: 125% of rated load for 5 min.
Voltage: 105 to 125 adjustable.
Regulation Line and Load: 0.5% for ±10% input change and 0.5% for no load to full load change. Each phase, 2% for 100% phase unbalance.
Frequency: 400 Hz ±2 Hz under all conditions of line and load (adjustable 380 to 420 Hz as option).
Distortion: 2% maximum.
NOTE: All other specifications are identical to Model 2501.

ELGAR Model 2000 Single, Two or Three Phase 2000 VA Solid-State Power Source

The Elgar Model 2000 AC power source is an all-silicon, solid state power source designed for maximum flexibility and reliability.

It utilizes two pieces of our industry-proven Model 1001 housed in a single rack mount enclosure. These units can be interconnected to provide the following output power configurations:
2000 VA, single phase,
2000 VA, 2 phase,
2000 VA, 3 phase, 3 wire delta, or
2000 VA, 3 phase, 4 wire wye.

Either amplifier will accept any of 40 interchangeable single or multiphase plug-in oscillators covering the range of 45 Hz to 5000 Hz, with accuracies from 1% to 0.0001%. Special oscillator modules are available providing ±0.01% amplitude and phase regulation, or amplitude and frequency BCD programming capability.

The Model 2000 is ideally suited for automated and laboratory testing of gyro, aircraft and missile and space equipment, and for operation of 60 Hz power equipment overseas.

Output Power:
Model 2000-1, 1ϕ.
Model 2000-2, 2ϕ (1 KVA/phase).
Model 2000-3D, 3ϕ, 3 wire delta, (667 VA/phase).
Model 2000-3Y, 3ϕ, 4 wire wye (667 VA/phase).

Power Factor: Full current rating into zero lagging to 0.7 leading for 2000-1 and 2000-2; 0.7 lagging to 0.7 leading for 2000-3D and 2000-3Y.

Output Voltage:
Model 2000-1*, 0-130 VAC or 0-260 VAC, 2 wire.
Model 2000-2, 0-32 VAC, 0-130 VAC, or 0-260 VAC, 3 wire.
Model 2000-3D, 0-32 VAC, 0-130 VAC, or 0-260 VAC line to line, 3 wire delta.
Model 2000-3Y, 0-32 VAC or 0-130 VAC line to neutral (120/208), 4 wire wye.

Output Configuration: All outputs isolated from ground; any one phase or neutral can be grounded. Voltage ranges are selected by strapping changes on rear panel terminal block.

Output Frequency Range: Model 2000-1 & Model 2000-2, 45 Hz to 5000 Hz at full power output. Model 2000-3D & Model 2000-3Y, 45 Hz to 2000 Hz at full power output.

Wave Shape: Sine wave.

Distortion: Less than 0.9% full frequency range at full output power. Less than 0.5% mid range (100 Hz to 1000 Hz) at full output power.

Load Regulation: ±1% no load to full load over rated frequency range (Model 2000-3Y with balanced load), adjustable through zero for specific load conditions.

Response Time: Less than 50 μsec.

Line Regulation: ±0.25% at full load versus ±10 VAC change at 115 VAC input. ±0.25% at full load versus ±20 VAC change at 230 VAC input.

Short Circuit Protection: Automatic current limiting protects against overload or short circuit, amplifier recovers immediately when overload or short circuit removed.

Output Noise: 60 db below full output voltage.

Input Power: 115 VAC ±10 VAC or 230 VAC ±20 VAC, single phase, 47 Hz to 63 Hz. (375 Hz to 425 Hz optional).

Temperature Range: 0°C to 50°C operational, −20°Cto + 85°C non-operational.

Weight: Net approx. 420 lbs., shipping approx. 440 lbs., with cabinet approx. 500 lbs.

*Model dash numbers are for initial use ordering; units are field changeable for any configuration with appropriate oscillator change.

ELGAR Super-Stable Solid-State Plug-In Oscillator Modules

For gyro drift and life testing Super-Stable (SS) plug-in o modules provide a stable-frequen distortion signal for any of the E power amplifiers. The plug-in os are designed for one, two, or thre operation depending on the amp combination of amplifiers select Super-Stable oscillators are un that they use electronic serv niques with remote sensing for an and phase regulation. Output freq are available from 300 Hz to at 0.01% accuracy. The nominal voltage must be specified along frequency when ordering any Super-Stable oscillators.

Output Voltages (Typical): 28 V VAC, 115 VAC.

Output Configuration: 1ϕ, 2ϕ or is 3-wire, open delta (floating).

Output Power: Depends on power fier selected.

Fixed Frequency (Typical): 400 Hz, 1,200 Hz, 9,600 Hz; other f cies optional.

Distortion: Less than 0.35% tota

Amplitude Stability: Load ±0.0 load to full load; Line ±0.01% fo ±10 V; Time ±0.1% for 1,00 under constant conditions; Specif refer to full wave average value form.

Temperature Coefficient: ±0.005

Phase Accuracy: Adjustable to ±

Phase Stability: ±0.1° for 1000

NOTE: Above specifications apply wh with any Elgar AC power amplifier.

Model	Frequency	Accuracy
441 - .01SS	400 Hz	0.01%
442 - .01SS	400 HZ	0.01%
443 - .01SS	400 HZ	0.01%

ec Plug-in Oscillator Modules are avail- le r:
An frequency and accuracy (to .0001%) fro 45 Hz to 10 KHz.
Du frequency (switchable).
Sp al purpose functions (programmable).

The Elgar DP Series of decoder programmers are precision programmable oscillators which operate in conjunction with Elgar's wide range of AC power sources. The standard output voltage is 0-3 V rms, however, options are available to adapt to power amplifiers requiring other drive levels and, in particular, Option No. 6 which provides 0-150 V rms at 25 milliwatts as a stimulus source.

They are designed for automatic programmed frequency selection, automatic programmed amplitude selection, automatic programmed phase angle selection, and combinations of frequency and amplitude and amplitude and phase angle.

The DP Series is available in 1, 2 or 3 phase configurations, 45 Hz to 10,000 Hz frequency range, and with the appropriate Elgar power amplifier, up to 6 KVA of output power.

Salient Features

Automatic frequency selection
Automatic amplitude selection
Automatic phase angle selection
Continuous waveform amplitude programming
Standard 8421 binary coded decimal system
Frequency response: ±0.1%.
System amplitude stability: ±0.01% versus 100% load change; ±0.01% versus ±10 V line change; ±0.1% for 1000 hours under constant conditions.

Frequency: Frequency Accuracy: ±1% of programmed value; Frequency Stability: 0.02%°C; Frequency Programming Range: 45 Hz to 10 KHz; Frequency Resolution: 3 decades with 3 ranges
Range 1: 45 Hz to 109.9....0.1 Hz steps
Range 2: 100 Hz to 1.099 KHz 1 Hz steps
Range 3: 1 KHz to 10.99 KHz 10 Hz steps
Frequency Response of Amplitude: ±0.1% of full output over frequency range.

Amplitude: Amplitude Programming Range: 0-130 V (0-32 and 0-260 optional); Output Signal to Power Amplifier: 0-3 V RMS (0-150 V at 25 milliwatts optional); Amplitude Resolution: 100 MV from 1-130 V; Amplitude Programming Accuracy: ±0.25% FS of range (half-wave average); Amplitude Stability: ±0.1% for 1000 hours at constant temperature, load and line; Temperature Coefficient: ±0.005%/°C; Distortion: Less than 0.5%, less than 0.2% mid band 200-1000 Hz; System Settling Time: 100ms, includes power amplifier.

Phase (Applicable to 2 phase systems): Phase Programming Range: 0-360° in 1° steps); Phase Programming Accuracy: ±1°.

Programming: BCD 8421 (parallel entry); Option 1: Logic level "O" = 0 to +0.5 V, "I" = +3.5 V to +15 V; Option 2: Contact closures; Option 3: Program storage; storage set time is 5ms; Option 4: External amplitude modulation; Option 5: ±0.1% amplitude programming accuracy; Option 6: Output voltage 0-150 VAC at 25 milliwatts. For two or three phase outputs, phase accuracies will be ±1° 45 Hz to 2 KHz, ±2° 2 KHz to 6 KHz (programmed F and/or A).

Programming Connectors: MS type (mating connectors supplied).

Input Power: 105-125 V or 210-250 V single phase, 47 to 425 Hz 100 watts maximum.

Size: 3½" h x 14" d x 19" wide, standard rack mounting.

Actual output voltage range and output power is dependent on Elgar power amplier selected. Phase programming is not available with frequency programming.

Model DPI-A: Amplitude programming only (fixed frequency .01%).

Model DPI-F: Frequency programming only (fixed amplitude).

Model DP2-P: Phase programming only (fixed frequency .01% and fixed amplitude).

Model DPI-AF: Amplitude and Frequency only (fixed phase).

Model DP2-AP: Amplitude and Phase only (fixed frequency .01%).

Example: DPI-AF-13 would be amplitude and frequency programming with storage, 8421 "IC" logic levels.

Model DP2-XX-XX For two phase.

Model DP3-XX-XX For three phase.

ELGAR
AC Line Conditioners

ELGAR Series 6000 High-Speed Solid-State AC Line Conditioners

Elgar AC line conditioners provide pure AC power by eliminating high-speed line and load transients as well as all other forms of power line disturbance. These versatile instruments feature response times 1,000 times faster (typically 50 microseconds) than the fastest AC line regulator. All Elgar units are designed for continuous operation and are contained in rack-mount enclosures. The front panel has meters to monitor input and output voltages and load current, an overload indicator, and power circuit breaker. Cooling air is drawn in at the front panel and exhausted at the rear. Anyone using voltage-sensitive equipment needs isolation from high-speed line transients. Unconditioned power sources are subject to fluctuating high-speed voltage changes which can cause erratic operation, component failures, and a reduction in equipment life. In the case of sensitive measuring and data handling equipment, high-speed line transients often are the cause of erroneous information. These unwanted transients, which occur on power lines, are voltage surges, high-voltage spikes, voltage dips, and low-voltage spikes. Frequencies are often in the megacycle range, with pulse durations ranging from one millisecond to just a few nanoseconds. High-frequency transients are most frequently caused by the operation of: arc welders, fluorescent lights, heaters cycling on and off, elevators, environmental chambers, shake tables, air conditioners, tape punches, thermal baths, etc. High voltage spikes appear on the power line each time the current is interrupted through an inductive load. Local user conditions such as intermittent heavy loads, long feeder lines, or multiple-customer use of common power sources cause low-voltage dips and low-voltage spikes. The speed and reliability of Elgar line conditioners completely eliminate unwanted transients, providing pure AC power.

Line Conditioner Selection Guide

Output Power (KVA)	Output Voltage (VAC)	Input Voltage (VAC)	Input Freq. (Hz)	Model
0.5	115	95-135	60	7006 A
1	115	95-135	50	6005 A

NOTES
1. Step-up or step-down combinations available such as 230 V input & 115 V output.
2. See text for detailed specifications.

The top trace shows a sudden decrease in input line voltage. The bottom trace is the AC Line Conditioner output, showing the instrument's fast response time by lack of variation in sine wave output.

A one-half-millisecond, seven-ampere load current pulse is shown on the top trace. Careful examination of the AC Line Conditioner output shown on the bottom trace reveals 25-microsecond response at beginning and end of the transient.

A distorted power input to the AC Line Conditioner is shown on the top trace. The resulting distortion-free pure sine wave, output of the Elgar AC Line Conditioner is shown on the bottom trace.

There are four models in this
6005A, 6006A, 6235A, and 623
cept where noted, specifications
same for all models.

INPUT:

Voltage: 95-115 V rms, 105-125
115-135 V rms, selectable by tap
(6005A & 6006A); 190-230 V rm
250 V rms, 230-270 V rms, select
tap switch (Models 6235A & 623

Frequency: 47 to 53 Hz (Models
& 6235A); 57 to 63 Hz (Models 6
6236A).

Power: 1,600 watts max.

Harmonic Distortion: 10% max.

Isolation: 100 db common mode
tion; 1 pf power transformer prin
secondary coupling capacitance
side of input normally strapped t
sis but may be floated to 300 V r

OUTPUT:

Voltage: 115 V rms setable to
(Models 6005A & 6006A); 230
setable to 0.1%, with 115 V rms o
(Models 6235A & 6236A).

Voltage Instability: ±0.05% for 2
under constant line, load, and a
temperature conditions.

Power: 1,000 VA from unity to
power factor, 4,500 VA max. peak i
aneous power; half power from z
to zero lead.

Harmonic Distortion: 0.2% max.

Line Regulation: ±0.025% for a
line change (Models 6005A & 6
±0.025% for a ±20 V line
(Models 6235A & 6236A).

Load Regulation: 0.025% for a
full resistive load change; 0.05%
zero to full load change at ±0.7
factor.

Amplitude Temperature Coef
0.005% per degree C max.

Peak Amplitude Instability: ±
cycle to cycle.

Maximum Crest Factor: (for rated
output) 2:5 times.

ELGAR
Series 3000 & 5000 High-Speed Solid-State AC Line Conditioners

There are eight models in this series: Models 3005A, 3006A, 3235A, 3236A, 5005A, 5006A, 5235A and 5236A. Except where noted, specifications are the same for all models.

INPUT:

Voltage: 95-115 V rms, 105-125 V rms, 115-135 V rms, selectable by tap switch (Models 3005A, 3006A, 5005A & 5006A); 190-230 V rms, 210-250 V rms, 230-270 V rms, selectable by tap switch (Models 3235A, 3236A, 5235A & 5236A).

Frequency: 47 to 53 Hz (Models 3005A 3235A, 5005A & 5235A); 57 to 63 Hz (Models 3006A, 3236A, 5006A & 5236A).

Input Power: 4,000 watts max. (Series 3000). 8,000 watts max. (Series 5000).

Harmonic Distortion: 10% max.

Isolation: 100 db common mode isolation; 1 pf power transformer primary to secondary coupling capacitance; low side of input normally strapped to chassis but may be floated to 300 V rms.

OUTPUT:

Voltage: 115 V rms, setable to 0.1% (Models 3005A, 3006A, 5005A & 5006A); 230 V rms, setable to 0.1%, with 115 V optional (Models 3235A, 3236A, 5235A & 5236A).

Voltage Instability: ±0.05% for 24 hours under constant line, load and ambient temperature conditions.

Output Power: (3000 Series) 2,500 VA from unity to ±0.7 power factor, 11,250 VA max. peak instantaneous power. (5000 Series) 5,000 VA from unity to ±0.7 power factor, 22,500 VA max. peak instantaneous power.

Harmonic Distortion: 0.2% max.

Line & Load Regulation: ±0.05% for a ±10 V line change and for zero to full load change (Models 3005A, 3006A, 5005A & 5006A); ±0.05% for a ±20 V line change and for zero to full load change (Models 3235A, 3236A, 5235A & 5236A).

Peak Amplitude Instability: ±0.01% cycle to cycle.

Maximum Crest Factor: 2.5 times (for rated power output).

Shunt Capacitance: Unit will operate with up to 300 μf of shunt capacitance.

TRANSIENT CHARACTERISTICS:

Line (10% step change): Output transient will not exceed 0.5% peak amplitude.

Impulse Settling Time: 50 μsec or less.

Overload Indication: Front panel lamp illuminates when load exceeds KVA rating. Raw AC power is applied to load during period of illumination.

Overload Protection: Excessive overload condition actuates front panel circuit breaker.

GENERAL

Metered Input/Output: Switchable input/output AC voltmeter and output current meter. Meter accuracies ±3% full scale.

Ambient Temperature: 0 to 55°C.

Storage Temperature: −20°C to 85°C.

Cooling: A blower provides internal forced air circulation; reversible air flow through front panel.

Dimensions: 3000 Series 19" w x 14" h x 19" d, for standard rack mounting. 5000 Series 19" w x 24½" h x 20" d, for standard rack mounting.

Net Weight: 3000 Series 175 lb. 5000 Series 400 lb.

Shipping Weight: 3000 Series 180 lb. 5000 Series 425 lb.

Capacitance: Unit will operate to 100 μf of shunt capacitance.

Characteristics

% step change): Output transient exceed 0.5% peak amplitude.

Settling Time: 50 μsec or less.

Indication: Front panel lamp illuminates when load exceeds 1 KVA. Raw power is applied to load during period of illumination.

Protection: Excessive overload condition actuates front panel circuit breaker.

GENERAL:

Input/Output: Switchable input/output and output current monitoring AC voltmeter. Meter accuracy ±3% full scale.

Temperature: 0 to 55°C.

Temperature: −20°C to +85°C.

A blower provides internal forced circulation; reversible air flow through front panel.

Dimensions: 19" w x 7" h x 17½" d, for standard rack mounting.

Weight: 105 lb.

Shipping Weight: 115 lb.

Model 7006A High-Speed Solid-State AC Line Conditioner

INPUT:

Voltage: 95-115 VAC, 105-125 VAC, 115-135 VAC, selectable by tap switch.

Frequency: 57 to 63 Hz.

Power: 325 watts.

Harmonic Distortion: 10% max.

OUTPUT:

Voltage: 115 V rms setable to 0.1%.

Power: 500 VA from unity to ±0.7 power factor, 2500 VA max. peak instantaneous power.

Harmonic Distortion: 0.25% max.

Line & Load Regulation: ±0.025% for a ±10 V line change; ±0.025% for zero to full load change.

Peak Amplitude Instability: 0.02% cycle to cycle.

Maximum Crest Factor: 3.

Shunt Capacitance: Operates with up to 100 μf.

Impulse Settling Time: 50 μsec. or less.

Overload Indication: Front panel lamp illuminates when load exceeds KVA rating.

GENERAL

Metered Input/Output: Switchable input/output and output current monitoring on AC voltmeter. Meter accuracy ±3% full scale.

Ambient Temperature: 0 to 55°C.

Storage Temperature: −20°C to +85°C.

Dimensions: 3½" h x 14" d x 19" w, for rack mounting.

Net Weight: 45 lb.

Shipping Weight: 55 lb.

FARATRON CORPORATION 290 Lodi Street, Hackensack, New Jersey 07601 (201) 488-

power SUPPLIES

SPECIFICATIONS

INPUT: 105-132 VAC, 47-420 Hz
LINE REGULATION: 0.01% for rated input changes
LOAD REGULATION: 0.01% for rated load changes
OUTPUT VOLTAGE ADJUSTMENT: ± 5% min.
RIPPLE: Less than 0.5MV rms, 3.0MV peak to peak
STABILITY: 0.02% or 10MV - whichever is greater
TEMPERATURE COEFFICIENT: 0.02%/°C + 1MV
TEMPERATURE RANGE: - 20°C to + 71°C
RESPONSE TIME: 20 microseconds
MTE PROGRAMING (RESISTIVE): 1000 ohms/volt
REMOTE PROGRAMING (VOLTAGE): 1 volt/volt
RMOTE SENSING: Sensing leads available at barrier strip
OVERLOAD PROTECTION: Factory preset
TERMAL PROTECTION: Automatic resetting thermostat protects unit against operation in excessive ambients
CONNECTIONS: Seven connector barrier strip

FARATRON CORPORATION

NOTES:

1. NO. 8-32 TAPPED HOLES (4 ON EACH OF 3 SURFACES) FOR CUSTOMER CHASSIS MOUNTING.
2. TWO NO. 6-32 TAPPED HOLES FOR MOUNTING OVERVOLTAGE PROTECTOR.

FERROTRAN
ELECTRONICS CO., INC.

SOLID STATE POWER SUPPLY MODULE

All silicon, long-life, semi-conductor POWERTRAN power supply module
Guaranteed 3 years. Gives dual, fixed D.C. output voltages.

INPUT VOLTAGE — 115 volts A.C.
SUBMINIATURE DUAL OUTPUT

SMA-6

Case; 3"x1¾"x1¼"; Mounts on a chassis with 2 ea. 4-40 blind inserts; no projecting studs; ideal for printed circuit boards; fixed voltage. 6 pin connector.

Model	D.C. Volts	D.C. Current	% Reg.	% Ripple	Price
SMA-6	6, 6	20ma	1.0	.3	$47
SMA-10	10, 10	20	1.0	.1	47
SMA-12	12, 12	20	1.0	.1	47
SMA-15	15, 15	20	1.5	.1	47
SMA-20	20, 20	15	1.5	.2	49
SMA-24	24, 24	15	1.5	.2	49
SMA-28	28, 28	12	1.5	.2	49

Case; 1⅝"x1⅞"x1⅝"; Mounts on a chassis with 4 ea. 6-32 studs. ⅝" diam. connector in cover. 6 pins; case style similar to SM units (see photo).

Model	D.C. Volts	D.C. Current	% Reg.	% Ripple	Price
SMAC-6	6, 6	20ma	1.0	.3	$47
SMAC-10	10, 10	20	1.0	.1	47
SMAC-12	12, 12	20	1.0	.1	47
SMAC-15	15, 15	20	1.5	.1	47

All power supplies with output volts of 750 or higher have special ceramic high voltage terminals.

SPECIAL COMPONENTS

In addition to its off-the-shelf products, FERROTRAN designs all types of power supplies and transformers to meet special requirements. This is done at no extra cost to the customer.

INPUT VOLTAGE — 115 volts A.C.
UNREGULATED MODULES

Ideal raw D.C. supplies containing transformer, rectifiers and capacitor filter. Simply attach series regulator or zener diode to convert to a regulated power supply; all solid state.

CONNECTIONS — 5 pin connector dead center on stud side of the case.
Pins 1 & 2 — 115 v. a.c. input, or
Pins 1 & 3 — 220 v. a.c. input.
Pin 4 — positive d.c. output.
Pin 5 — negative.

POWER SUPPLY DESIGN INFORMATION

MECHANICAL FEATURES

CONNECTOR — Compression type multi-lead glass headers, 0.900" dia. for all units. Hook type solder pins are standard. Hooks are ¼-inch high. (Transformer type terminals or octal plug-in types may be specified. Transformer terminals are ⅞" high x ½" in dia. Octal plug-in terminals fit standard 8-pin sockets.

CONNECTOR MOUNTING — All connectors are mounted dead-center in stud side of case. Clearance hole for standard hook connector is 1¹⁄₁₆".

HEATSINKS — Internal, for all units. No transistors or zeners mounted externally; no fins mounted externally.

CASE MOUNTING — Chassis mounted with four threaded studs.

CONNECTIONS

Single D.C. Output Voltage Connections for HM, MC, MCH, HV, SMF, SM, SU, SUM, MV, HVA Modules.

pins 1 & 2 parallel to wide side of case

Dual D.C. Output Voltage Connectors for MA, MB, HMJ, HMC, HHV Modules.

pins 3 & 4 power supply #1

pins 5 & 6 power supply #2

pins 1 & 2 input

Dual module, as per above sketch. Pins 1 & 2 115 AC input. Pins 3 & 4 DC output. Connect a fuse between Pins 5 & 6 equal to d.c. rated current of module.

ELECTRICAL FEATURES

INPUT VOLTAGE RANGE — Regulated from 105 to 130 volts a.c. input; max. is 140 v.

INPUT FREQUENCY RANGE — 55 to 450 cycles; 55 to 2 kc at small additional charge.

REGULATION — Load regulation is specified in tables. Line voltage regulation is approximately 3% (105-130 v. a.c.)

RIPPLE — RMS value specified in tables at 60 cycles input and at currents indicated; will be reduced at lower currents. For approximate ripple at 400c divide 60c. ripple by 6.

OUTPUT VOLTAGE — Fixed voltage units have an output voltage within 5% of values shown. Customers may specify exact output voltage required at no extra charge.

COMPONENTS — All components rated for minimum of 85 degrees C. and are of domestic manufacture. All semi-conductors are silicon.

POLARITY — Outputs are floating off case with 1000 v. d.c. test voltage; may be used positively or negatively.

STABILITY — Fully operable on turn-on; voltage varies within a few percent during first five minutes; after half-hour of operation, voltage remains stable within a small fraction of 1%.

TEMP. (STORAGE) — −54°C to +85°C.

TEMP. (OPERATING) — −30°C to +70°C exc. where specified.

NOTE:
All modules in these pages may be obtained with a 220 v. a.c. input. These units will work at 50 cycles.

WARRANTY

The manufacturer warrants its product for a period of three years. If failure of product occurs during this time, manufacturer will repair unit at no charge, or if it is non-repairable, to replace the unit on a pro-rated basis. Ferrotran's only obligation shall be to replace such quantity of product proved to be defective. Manufacturer shall not be liable for any injury, loss or damage direct or consequential arising out of use or inability to use the product.

FLITE-TRONICS

60 Hz 400 Hz STATIC INVERT

Other Inverters Available

- **Model PC-14B 125**
- **Model PC-15A 250**
  Specifications same as PC-1
- **12V to 24V Conve**
- **24V to 12V Conve**

For applications requiring greater than 600 VA of continuous power, the Flite-Tronics' Model PC-17 Inverter can be paralleled as necessary to double, triple, or quadruple the output power of a single unit. This is simply done by phase locking the oscillator in the PC-17. Malfunction of a single unit when connect in this manner will not damage the other units parallel. Each unit has its own overload protectio Each device is capable of self-preservation.

SPECIFICATIONS MODEL PC-17 (600 VA) STATIC INVERTER

INPUT VOLTAGE:
28 VDC ±2.0 VDC

INPUT CURRENT:
31A — full load
1.0A — no load

OUTPUT VOLTAGES:
115 VAC +5% −7%
26 VAC +5% −7%

OUTPUT FREQUENCY:
400 Hz ±1%

OUTPUT POWER:
600 VA continuous for 115 VAC output
125 VA continuous for 26 VAC output
NOTE: Total continuous output power 600 VA.

OUTPUT WAVEFORM:
Sine Wave, Single Phase

HARMONIC DISTORTION:
7% maximum (Typically 3%)

POWER FACTOR:
.8 to 1.0

ALTITUDE:
45,000 feet

EFFICIENCY:
70% typical

TEMPERATURE:
−65°F to 160°F

WEIGHT:
14.7 lbs.

SIZE:
Width 8½″
Length 12″
Height 4¹⁄₁₆″

INPUT OVERVOLTAGE:
Withstands 130% overvoltage (37 VDC) for five minutes minimum while delivering full rated 600 VA output power. Output voltage under this condition 115 VAC +5% −7%.

EMISSION RFI:
Radiated & Conducted . . . 90KC to 1000MC.
Far below levels specified in Appendix A of RTCA Paper 120-61/DO-108 Category "A".

HUMIDITY:
Greater than 95% for ten days, temperature cycled between 75°F to 160°F.

VIBRATION:
To withstand at least 10 G's from 10 to 500 cycles per second in three directions for 90 minutes each direction.

SHOCK:
To withstand at least 10 G milliseconds in three directi

OVERLOAD CAPABILITY:
Deliver 150% of rated outpu at rated output voltage for a of not less than 5 minutes volt amp load).

INPUT VOLTAGE PROTECTION:
Unit withstands transients of lasting 1 millisecond on the input line.

EXCESSIVE OVERLOAD & OUT SHORT CIRCUIT:
Withstands without damage dation loads exceeding 150% to an output short circuit. U ers rated output on removal condition.

SPECIFICATIONS MODEL PC-16 STATIC INVERTER

POWER OUTPUT:
250 VA Continuous
150% Overload 5 minutes
pf — .8 to 1.0

VOLTAGE INPUT:
1. 28 VDC ±2 Volts
2. Withstands 88 Volt Transient for 1 Millisecond

INPUT CURRENT:
14 Amp — full load
1 Amp — no load

FREQUENCY:
60 HZ ±1 Hz

VOLTAGE OUTPUT:
115 VAC RMS +5% −7%

AMPLITUDE DISTORTION:
Less than 7%

WAVE FORM:
Sine Wave

PHASE:
Single

SHORT CIRCUIT
Withstand for 1 minute or

TEMPERATURE:
−10°F to +160°F

ALTITUDE:
45,000 Ft.

WEIGHT:
16 lbs.

SIZE:
7½″ x 12″ x 4″ overall dim

For application requiring greater than 250 VA of continuous power Model PC-16 can be paralleled to double or triple the output power of a single unit.

RECHARGEABLE NICKEL-CADMIUM BATTERIES

- **Operate over a wide temperature range**
- **High discharge rate capability with constant voltage output**
- **Long cycle life**
- **Meet severe environmental requirements**
- **Customized battery designs available**

Typical sealed-cell battery designs.

Electric rechargeable nickel-cadmium batteries are suitable for a wide variety of commer- tary, and aerospace applications. Available battery types include sealed, pressure relieved, ed cells nominally rated from 0.08 ampere-hours to 160 ampere-hours (at the one-hour rate).

lls utilize sintered-plate electrode construction to provide the following excellent operating acristics:

ture — the batteries will operate in temperatures ranging from −40°C to +60°C with an range of +15°C to +30°C.

rates several times rated call capacity are possible up to: 10 times for sealed cells, for pressure relieved cells, and 30 times for vented cells. Output voltage remains relatively over 90 percent of the discharge period.

e — under specified rated conditions, the number of charge/discharge cycles is normally of 1000. A life in excess of 5,000 cycles is possible at discharge rates not exceeding 25 f rated cell capacity.

esistance — the cells exhibit great resistance to shock, vibration, and physical damage. to 5,000 G's have been performed without causing cell damage.

COMMERCIAL AND MILITARY APPLICATIONS

ells are available in a wide variety of shapes and ampere-hour ratings to obtain batteries of any needed voltage or size.

CELLS — Sealed cells are available in three basic shapes: button, al, and rectangular. No maintenance is required and these cells rate in any position. In addition, all cylindrical and rectangular this classification feature a resealable vent mechanism that maximum cell life, even under infrequent abnormal operation.

Button cells are particularly suited for portable radios, flashlights, photo flash equipment, burglar alarms, and other low-drain high-capacity applications. Available ratings run from 0.08 to 1.60 ampere-hours at the one-hour rate.

Cylindrical and rectangular sealed cells provide maximum discharge rates and capacity. The special resealing vent mechanism on these cells provides added safety and reliability, making them especially suited for portable, cordless, rechargeable consumer products such as TV sets, radio receivers, and transceivers; appliances; and starting small gas engines. Available ratings run from 0.08 to 4.0 ampere-hours at the one-hour rate.

VENTED CELLS — Vented cells provide outstanding performance where large peaks of power and fast recharging are required. Typical applications include aircraft, turbine, and diesel engine starting. Available ratings run from 11.0 to 160.0 ampere-hours at the one-hour rate.

SPECIAL DESIGNS — All of these battery cell types can be customized, through use of special battery design and packaging techniques, to meet individual power and size requirements.

AEROSPACE APPLICATIONS

Electric nickel-cadmium aerospace batteries are designed to for extended periods in an outer space environment. The battery nploy a hermetic ceramic-to-metal seal (leakage rate less than 1^{8} cc/second of helium per year) construction that effectively in- the positive terminal or both terminals. The cells are also de- o withstand constant overcharging at specified rates.

alized cell and battery designs will be built to meet unusual nents. This includes special cell terminal arrangements, deep cases, cell case design, and third electrode control circuit to faster charging. Available ratings run from 0.75 to 100.0 ampere- t the one-hour rate.

WRITE FOR BULLETIN GEA-7287

Hermetically-sealed aerospace cells are available in stainless-steel cylindrical or rectangular case designs.

omplete information contact nearest GE Sales Office listed on inside front or write to General Electric Co., Section 998-88, Schenectady, N. Y. 12305.

GENERAL ELECTRIC

AC VOLTAGE STABILIZERS

For Electronic and Electric Equipment

General Electric a-c voltage stabilizers are static-magnetic transformer-type products which provide voltage maintained within ±1% variation while input line voltage fluctuates ±15%. They are offered in the following variations:

Unfiltered output: output voltage waveform is relatively flat-topped, with harmonic content from 15 to 20%.

Harmonic filtered output: output voltage is filtered to near sinusoidal waveshape, with a maximum of 3% harmonic content.

Enclosed construction: completely metal enclosed for safe external mounting.

Open construction: for installation within electronic or electric equipment.

Cord/Receptacle units: for convenient temporary connections.

SINGLE PHASE — Magnetic-capacitor circuitry is frequency sensitive. Stabilizers designed for one frequency are not suitable for use on another.

THREE PHASE — Standard single-phase a-c voltage stabilizers can be connected for 3-phase, 4-wire loads with input connected delta. However, single-phase models cannot be connected for 3-phase, 3-wire loads: select from 3-phase delta-delta models.

GENERAL ELE

STABILTRON*
AC VOLTAGE STABILIZERS

r Electronic and Electric Equipment Requiring PRECISE Voltage Control

l Electric Stabiltron a-c voltage can be used in a wide variety nic equipment applications where ntrol of voltage is required. The consists entirely of static com- there are no tubes to burn out parts to replace or maintain.

abiltron senses deviations from rmined output voltage level by etector. The error signal, through h-controlled rectifier circuit, aug- voltage stabilizer action and almost instantaneous correction voltage.

applications include computers, d communications equipment, process control, and X-ray .

tage — The most common power ltages can be handled by the models listed. Stabiltron units ovided for special voltage levels t.

oltage — Stabiltron voltage stabi- ntain extremely precise voltage spite of wide fluctuations of line equency, load, load power factor, ent temperatures.

ble below illustrates the effect tput of the maximum steady state s, within rated limits of some of ables.

TYPICAL OUTPUT VOLTAGE RISTICS

	Excursion	Output Voltage Bandwidth¶
	95 to 130	0.02 to 0.2%
	57 to 63 Hertz	0.15 to 0.4%
	0 to 100% rated load	0.02 to 0.1%
	0.4 lagging to unity	0.01 to 0.1%
	−25C to 40C	0.01%/degree C

is indicated because exact amounts are on the static level of other variables.
Stabiltron unit is operated at less than , the line voltage can be reduced con- below 95 volts without serious de- of the output voltage.

— Under transient line or load s, elapsed time for correction of oltage and transient excursion normal bandwidth are key con- s to equipment operation.

tabiltron provides fast response l transient excursion through its mbination of solid state and mag- uitry.

e of General Electric Co.

ENCLOSED CONSTRUCTION - 2-kva units are suitable for either wall or floor mounting. 5- and 10-kva units can be floor mounted only.

PANEL CONSTRUCTION is suitable for standard 19-inch rack mounting.

OPEN CONSTRUCTION is suitable for horizontal or vertical mounting surfaces in equipment enclosures.

TABLE 2 — TYPICAL TRANSIENT RESPONSE CHARACTERISTICS

Transient Change	Percent Peak Output Voltage Excursion	Response‡ Time	Total Recovery§ Time
0 to 115V input	14%	4 Hertz	13 Hertz
95 to 130V input	14%	3 Hertz	8 Herzt
130 to 95V input	9%	5 Hertz	9 Hertz
0 to 100% rated load	24%	1 Hertz	2 Hertz
20% to 100% rated load	21%	1 Hertz	2 Hertz
100% to 20% rated load	34%	1 Hertz	10 Hertz

‡ The time required for the output to recover 63.3% from its maximum excursion.
§ The time required for the output to recover to normal bandwidth limits.

Harmonic Content — Under all rated ranges of line variation and most load conditions, the total harmonic content of the output wave form will not exceed three percent for a sine wave power source. Even under adverse conditions, when the power source is not a sine wave, the Stabiltron voltage stabilizer will correct the wave form to the load to approximately three percent harmonic content.

Rectifier-filter Loading — Since the output wave form is low in harmonic content, the Stabiltron voltage stabilizer can be connected successfully to a rectifier (capacitor input) filter load to the input of a d-c power supply having capacitor input filters.

GENERAL ELECTRIC

REGULATED DC POWER SUPPLIES

Improve Performance of Computers and Other Electronic Equipment

These component power supplies can be used in a wide variety of applications where relatively constant d-c voltage is required despite fluctuating line voltages. Computers, process control equipment, and electronic measuring devices are typical applications where demands for accuracy require constant regulation of voltage.

Performance-proved GE d-c power supplies can be designed to suit your needs for either 50- or 60-Hertz power sources.

† May vary ±1%. All standard units come equipped with a plate for 19-inch rack mounting.
‡ Indicates approximate percent increase in output voltage due to decrease of load current from full load.
§ Rack mounting plate has four mounting slots on each end. Distance between centers of two outer slots is 7½ in., between two inner slots 3 in.
¶ Not available for 19-inch rack mounting.

Mounting holes suitable for ¼-20 screws. Length of screw may vary with chassis height.

Typical circuit showing voltage stabilizers and filter components.

EFFECT OF INPUT VOLTAGE VARIATION

D-c power supplies can be designed for various input voltages and ranges. With all other variables constant, the output voltage will not vary more than ±1 percent for a change in input voltage over the rated range of 97 to 130 volts input.

EFFECT OF TEMPERATURE CHANGE

For every 40C change in the ambient temperature, the output voltage level will change approximately one percent.

EFFECT OF FREQUENCY

A change of one percent in frequency will change output voltage level approximately one and one-half percent.

ISOLATION

All d-c power supplies provide electrical isolation between the a-c power source and the d-c load.

POLARITY

GE d-c power supplies can signed with the polarity you All standard units listed can be with either plus or minus grou

RIPPLE

Ripple levels of one perce meet most requirements. Howeve levels of ripple content can be into GE power supplies.

EFFICIENCY

Efficiency ranges from 70 to cent for normal output voltag For unusually low output vol low power ratings, some dec efficiency may occur.

REGULATION

Load regulation characteristics on the rated output voltage a power level of the power supply

When narrow range input ratings are not listed for certain models, units can be c tom designed as needed.

Load va is based on ontput voltage at midpoint in the output range.

When output voltage is adjusted up or down from midpoint, the rated input rang will shift proportionately.

te: A dual input voltage range models are connected for the narrow range w n shipped. Reconnection for the wide input range can be made when t unit is installed, if desired. For reconnection, follow directions in- c led with the unit.

o Waveform Distortion

o ha onic waveform distortion is introduced at any load or with any put ltage. The output voltage waveform is a precise reproduction of pplie nput waveform.

djusta le Output Voltage

utpu voltage for units nominally rated 115 volts is adjustable from 110 120 olts. Output voltage also is adjustable from 220 to 240 volts for its ed 230 volts; from 440 to 480 volts for nominally rated units of 50 vts. Please note that the specified input-voltage range is applicable r nominal output voltage. When operating at any other output voltage ithin pecified range, the input voltage range shifts in proportion with e se ted output voltage.

ccur Static-sensing Control

olid- te control combined with the new Sylvan-Kettler static-sensing evice chieve the optimum in automatic accuracy. The voltage regulator gov ned automatically by a dead-band-type voltage-sensitive control tilizi either lamp or zener bridges. The circuit includes magnetic input ircui reakers and an output voltmeter.

§ OEM quantity prices are available on request.

† This model is suitable for a wider input voltage range, i.e., 190-270V.

‡ These models can be used for 199-217V output and 181 to 236V input by changing connections as outlined in connection diagram included in shipping carton.

FEATURES

- No wave-form distortion
- Dual rated for wide or narrow input voltage ranges
- Adjustable output voltage
- ±1% output voltage band for rated input ranges
- Output voltmeter included
- Fused control circuit
- Fast voltage correction
- −20 to +40C ambient temperature range
- 0 to 100% rated load
- Not sensitive to load power factor
- Not sensitive to line frequency (59-61 Hz)
- Up to 99% efficient
- Solid State control using lamp bridge circuit (Zener diode bridge circuit is available at slightly higher price.)
- Easily replaceable control circuit

Prices subject to change without notice.

GENERAL ELECTRIC

Vol. 1 TEST INSTRUMENTS EQUIPMENT & SYSTEMS

GATES

A single source for all possible types of "brute force" and regulated power supplies that can fill your design and application needs. Gates Power Supplies give you absolutely lowest cost and lo The units are excellently constructed of high rated components for trouble free, years of

Silicon or Selenium. Single and three-phase units. 1 to 1000 volts, 1 to 1000 Amps. Mete unmetered Static or variable outputs. Rack, cabinet or chassis mounts. Unit or hundred quantities delivery. Two year guarantees. Power supplies for OEM Application, Testing, Prototype, Lab typ Plating, Motor Control, Cathodic Protection, Transistor power, Anodizing, Battery Charging, Batte versions, Marine types, Aircraft Starting.

ECONOMY RANGE DC POWER SUPPLIES — Less Than 1% Ripple - Good Regulation - Rack Mount Type - Heavy Duty Construction - Powerstat - Fused 2% Meters - 115 Vac Input
